Design Research in Information Systems Alan Hevner,Samir Chatterjee,2010-06-14 It is 5 years since the publication of the seminal paper on "Design Science in Information Systems Research" by Hevner, March, Park, and Ram in MIS Quarterly and the initiation of the Information Technology and Systems department of the Communications of AIS. These events in 2004 are markers in the move of design science to the forefront of

information systems research. A suf cient interval has elapsed since then to allow assessment of from where the eld has come and where it should go. Design science research and behavioral science research started as dual tracks when IS was a young eld. By the 1990s, the in ux of behavioral scientists started to dominate the number of design scientists and the eld moved in that direction. By the early 2000s, design people were having dif culty publishing in mainline IS journals and in being tenured in many universities. Yes, an annual Workshop on Information Technology and Systems (WITS) was established in 1991 in conju- tion with the International Conference on Information Systems (ICIS) and grew each year. But that was the extent of design science recognition. Fortunately, a revival is underway. By 2009, when this foreword was written, the fourth DESRIST c- ference has been held and plans are afoot for the 2010 meeting. Design scientists regained respect and recognition in many venues where they previously had little.

  The Computer as Medium Berit Holmqvist,1993 Many industrial training applications, educational applications, and of course information applications such as databases and hypermedia are all attempts to communicate, and yet we really don't know much about the computer as a communicative medium. Bringing together a collection of essays presenting such diverse theoretical approaches as general semiotics, linguistics, communication theory, literary and art criticism, sociology, and history, the editors set out to establish and elaborate the role of computer systems as a sign technology. The volume is divided into three main parts, each focused on a different field of semiotic inquiry. Computer-Based Signs discusses the special nature of signs produced by means of computers. The Rhetoric of Interactive Media deals with codes of aesthetics and composition for the new elastic medium of communication: interactive fiction and hypertext. Computers in Context analyzes computer technology in the larger cultural, historical, and organizational contexts. Scholars in computer science, cognitive science, organization theory, information and media science, semiotics, communication, and linguistics will find this book invaluable, and as current excitement about hypermedia and electronic books continues to grow, a broader audience including computer artists and literary critics will also find it a useful resource.
