Transactions on Large-Scale Data- and Knowledge-Centered Systems VIII Abdelkader Hameurlain,Josef Küng,Roland Wagner,Alfredo Cuzzocrea,Umeshwar Dayal,2013-04-18 The LNCS journal Transactions on Large-Scale Data- and Knowledge-Centered Systems focuses on data management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. Current decentralized systems still focus on data and knowledge as their main resource. Feasibility of these systems relies basically on P2P (peer-to-peer) techniques and the support of agent systems with scaling and decentralized control. Synergy between grids, P2P systems, and agent technologies is the key to data- and knowledge-centered systems in large-scale environments. This, the eighth issue of Transactions on Large-Scale Data- and Knowledge-Centered Systems, contains eight revised selected regular papers focusing on the following topics: scalable data warehousing via MapReduce, extended OLAP multidimensional models, naive OLAP engines and their optimization, advanced data stream processing and mining, semi-supervised learning of data streams, incremental pattern mining over data streams, association rule mining over data streams, frequent pattern discovery over data streams.

Sequence Comparison in Historical Linguistics Mattis List,2014-07-21 The comparison of sound sequences (words, morphemes) constitutes the core of many techniques and methods in historical linguistics. With the help of these techniques,

corresponding sounds can be determined, historically related words can be identified, and the history of languages can be uncovered. So far, the application of traditional techniques for sequence comparison is very tedious and time-consuming, since scholars have to apply them manually, without computational support. In this study, algorithms from bioinformatics are used to develop computational methods for sequence comparison in historical linguistics. The new methods automatize several steps of the traditional comparative method and can thus help to ease the painstaking work of language comparison. Dissertations in Language and Cognition This series explores issues of mental representation, lingustic structure and representation, and their interplay. The research presented in this series is grounded in the idea explored in the Collaborative Research Center 'The structure of representations in language, cognition and science' (SFB 991) that there is a universal format for the representation of linguistic and cognitive concepts.

Cube Bead Stitching Virginia Jensen,2012-11-19 Making jewelry with cube beads requires no special training or classes. This book explains it all. With clear instructions and hundreds of color photographs, expert Virginia Jensen shows how to make stunning jewelry using many of the most popular off-loom stitches. Chapters are divided by project type, including bracelets, earrings, necklaces, rings, and decorative items. Beginners learn the fundamentals of many popular stitches as they create the projects, while more experienced crafters enjoy the challenge of weaving an uncommon shape into a knockout piece.

Anaphora Resolution Massimo Poesio,Roland Stuckardt,Yannick Versley,2016-08-04 This book lays out a path leading from the linguistic and cognitive basics, to classical rule-based and machine learning algorithms, to today's state-of-the-art approaches, which use advanced empirically grounded techniques, automatic knowledge acquisition, and refined linguistic modeling to make a real difference in real-world applications. Anaphora and

coreference resolution both refer to the process of linking textual phrases (and, consequently, the information attached to them) within as well as across sentence boundaries, and to the same discourse referent. The book offers an overview of recent research advances, focusing on practical, operational approaches and their applications. In part I (Background), it provides a general introduction, which succinctly summarizes the linguistic, cognitive, and computational foundations of anaphora processing and the key classical rule- and machine-learning-based anaphora resolution algorithms. Acknowledging the central importance of shared resources, part II (Resources) covers annotated corpora, formal evaluation, preprocessing technology, and off-the-shelf anaphora resolution systems. Part III (Algorithms) provides a thorough description of state-of-the-art anaphora resolution algorithms, covering enhanced machine learning methods as well as techniques for accomplishing important subtasks such as mention detection and acquisition of relevant knowledge. Part IV (Applications) deals with a selection of important anaphora and coreference resolution applications, discussing particular scenarios in diverse domains and distilling a best-practice model for systematically approaching new application cases. In the concluding part V (Outlook), based on a survey conducted among the contributing authors, the prospects of the research field of anaphora processing are discussed, and promising new areas of interdisciplinary cooperation and emerging application scenarios are identified. Given the book's design, it can be used both as an accompanying text for advanced lectures in computational linguistics, natural language engineering, and computer science, and as a reference work for research and independent study. It addresses an audience that includes academic researchers, university lecturers, postgraduate students, advanced undergraduate students, industrial researchers, and software engineers.

This volume collects the final and extended contributions presented at EVALITA 2011, the third edition of the evaluation campaign. The 36 revised full papers were carefully reviewed and selected from a total of 87

submissions. The papers are organized in topical sections roughly corresponding to evaluation tasks: parsing - dependency parsing track, parsing - constituency parsing track, domain adaptation for dependency parsing, named entity recognition on transcribed broadcast news, cross-document coreference resolution of named person entities, anaphora resolution, supersense tagging, frame labeling over italian texts, lemmatisation, automatic speech recognition - large vocabulary transcription, forced alignment on spontaneous speech.

B Cubed Book 1 Born Jenna McCormick,2021-04-14 Born: Natural born humans are precious few and dwell in darkness. Bred: Genetically engineered slaves who are the protectors of the Born. Borg: The cybernetically enhanced enclave that split from the Born humans. B Cubed: These three factions are all that remains of the human race after the world stopped turning. Scavenging in the darkness for what little is left, the war between them rages on though few know why. It begins with a child's prophesy and can only end when they unite. Or die. From the moment he spies her silhouette cast by the bonfire, Cormack understands what it is to yearn for something he will never possess. Breds are made to provide for the natural born humans, dig their homes deep beneath the surface of the earth and to protect them from the ever-present cyborg threat. A Bred who reaches beyond his station will be recycled immediately, yet Cormack cannot get her visage out of his mind. Until he unearths a box, buried long before the earth stopped spinning. Task Mistress Allora has no wish to brutalize the Bred worker she finds hoarding treasure, but as a servant of the colony that raised her from infancy, she is duty bound to report anything unusual to the Overlord, even if it costs

the blue-eyed man his life. Yet something about the way Cormack watches her forces Allora to reevaluate her understanding of right and wrong. For this genetically engineered soldier is her only protection against the cyborgs who seek what they have discovered, a journal written by the prophetess Cassandra and a way to end the warring between the factions forever. Born is the first entry in the B Cubed trilogy. If you like dystopian world-building and forbidden desire, then you'll love Jenna McCormick's captivating tale. Buy Born and get a glimpse into the future today!

Only one man has the ability to save it but Dayen can barely function. Saddled from birth with a crippling form of telepathy, he is unable to give or receive touch. So what will he do with the Born woman destined to be his mate? A woman who has more reasons than most to fear the touch he longs to give her and her alone?

Anaphora Processing and Applications Lalitha Devi Sobha,António Branco,Ruslan Mitkov,2009-10-27 Distribution of anaphora in natural language and the complexity of its resolution have resulted in a wide range of disciplines focusing their research on this grammatical phenomenon. It has emerged as one of the most productive topics of multi- and int- disciplinary research such as cognitive science, artificial intelligence and human language technology, theoretical, cognitive, corpus and computational linguistics, philosophy of language, psycholinguistics and cognitive psychology. Anaphora plays a major role in understanding a language and also accounts for the cohesion of a text. Correct interpretation of anaphora is necessary in all high-level natural language pr- essing applications. Given the growing importance of the study of anaphora in the last few decades, it has emerged as the frontier area of research. This is evident from the high-quality th submissions received for the 7 DAARC from where the 10 excellent reports on - search findings are selected for this volume. These are the regular papers that were presented at DAARC.

Progress in Intelligent Decision Science Tofigh Allahviranloo,Soheil Salahshour,Nafiz Arica,2021-01-29 This book

contains the topics of artificial intelligence and deep learning that do have much application in real-life problems. The concept of uncertainty has long been used in applied science, especially decision making and a logical decision must be made in the field of uncertainty or in the real-life environment that is formed and combined with vague concepts and data. The chapters of this book are connected to the new concepts and aspects of decision making with uncertainty. Besides, other chapters are involved with the concept of data mining and decision making under uncertain computations.

Information-theoretic causal inference of lexical flow

Johannes Dellert,2019 This volume seeks to infer large phylogenetic networks from phonetically encoded lexical data and contribute in this way to the historical study of language varieties. The technical step that enables progress in this case is the use of causal inference algorithms. Sample sets of words from language varieties are preprocessed into automatically inferred cognate sets, and then modeled as information-theoretic variables based on an intuitive measure of cognate overlap. Causal inference is then applied to these variables in order to determine the existence and direction of influence among the varieties. The directed arcs in the resulting graph structures can be interpreted as reflecting the existence and directionality of lexical flow, a unified model which subsumes inheritance and borrowing as the two main ways of transmission that shape the basic lexicon of languages. A flow-based separation criterion and domain-specific directionality detection criteria are developed to make existing causal inference algorithms more robust against imperfect cognacy data, giving rise to two new algorithms. The Phylogenetic Lexical Flow Inference (PLFI) algorithm requires lexical features of proto-languages to be reconstructed in advance, but yields fully general phylogenetic networks, whereas the more complex Contact Lexical Flow Inference (CLFI) algorithm treats proto-languages as hidden common causes, and only returns hypotheses of historical contact

situations between attested languages. The algorithms are evaluated both against a large lexical database of Northern Eurasia spanning many language families, and against simulated data generated by a new model of language contact that builds on the opening and closing of directional contact channels as primary evolutionary events. The algorithms are found to infer the existence of contacts very reliably, whereas the inference of directionality remains difficult. This currently limits the new algorithms to a role as exploratory tools for quickly detecting salient patterns in large lexical datasets, but it should soon be possible for the framework to be enhanced e.g. by confidence values for each directionality decision.
