Sequence Comparison in Historical Linguistics Mattis List,2014-07-21 The comparison of sound sequences (words, morphemes) constitutes the core of many techniques and methods in historical linguistics. With the help of these techniques, corresponding sounds can be determined, historically related words can be identified, and the history of languages can be uncovered. So far, the application of traditional techniques for sequence comparison is very tedious and time-consuming, since scholars have to apply them manually, without computational support. In this study, algorithms from bioinformatics are used to develop computational methods for sequence comparison in historical linguistics. The new methods automatize several steps of the traditional comparative method and can thus help to ease the painstaking work of language comparison. Dissertations in Language and Cognition This series explores issues of mental representation, lingustic structure and representation, and their interplay. The research presented in this series is grounded in the idea explored in the Collaborative Research Center 'The structure of representations in language, cognition and science' (SFB 991) that there is a universal format for the representation of linguistic and cognitive concepts.

Anaphora Resolution Massimo Poesio,Roland Stuckardt,Yannick Versley,2016-08-04 This book lays out a path leading from the linguistic and cognitive basics, to classical rule-based and machine learning algorithms, to today's state-of-the-art approaches, which use advanced empirically grounded techniques, automatic knowledge acquisition, and refined linguistic modeling to make a real difference in real-world applications. Anaphora and coreference resolution both refer to the process of linking textual phrases (and, consequently, the information attached to them) within as

well as across sentence boundaries, and to the same discourse referent. The book offers an overview of recent research advances, focusing on practical, operational approaches and their applications. In part I (Background), it provides a general introduction, which succinctly summarizes the linguistic, cognitive, and computational foundations of anaphora processing and the key classical rule- and machine-learning-based anaphora resolution algorithms. Acknowledging the central importance of shared resources, part II (Resources) covers annotated corpora, formal evaluation, preprocessing technology, and off-the-shelf anaphora resolution systems. Part III (Algorithms) provides a thorough description of state-of-the-art anaphora resolution algorithms, covering enhanced machine learning methods as well as techniques for accomplishing important subtasks such as mention detection and acquisition of relevant knowledge. Part IV (Applications) deals with a selection of important anaphora and coreference resolution applications, discussing particular scenarios in diverse domains and distilling a best-practice model for systematically approaching new application cases. In the concluding part V (Outlook), based on a survey conducted among the contributing authors, the prospects of the research field of anaphora processing are discussed, and promising new areas of interdisciplinary cooperation and emerging application scenarios are identified. Given the book's design, it can be used both as an accompanying text for advanced lectures in computational linguistics, natural language engineering, and computer science, and as a reference work for research and independent study. It addresses an audience that includes academic researchers, university lecturers, postgraduate students, advanced undergraduate students, industrial researchers, and software engineers.

Evaluation of Natural Language and Speech Tool for Italian Bernardo Magnini,Francesco Cutugno,Mauro Falcone,Emanuele Pianta,2013-01-03 EVALITA (http://www.evalita.it/) is the

reference evaluation campaign of both Natural Language Processing and Speech Technologies for the Italian language. The objective of the shared tasks proposed at EVALITA is to promote the development of language technologies for Italian, providing a common framework where different systems and approaches can be evaluated and compared in a consistent manner. This volume collects the final and extended contributions presented at EVALITA 2011, the third edition of the evaluation campaign. The 36 revised full papers were carefully reviewed and selected from a total of 87 submissions. The papers are organized in topical sections roughly corresponding to evaluation tasks: parsing - dependency parsing track, parsing - constituency parsing track, domain adaptation for dependency parsing, named entity recognition on transcribed broadcast news, cross-document coreference resolution of named person entities, anaphora resolution, supersense tagging, frame labeling over italian texts, lemmatisation, automatic speech recognition - large vocabulary transcription, forced alignment on spontaneous speech.

Information-theoretic causal inference of lexical flow Johannes Dellert,2019 This volume seeks to infer large phylogenetic networks from phonetically encoded lexical data and contribute in this way to the historical study of language varieties. The technical step that enables progress in this case is the use of causal inference algorithms. Sample sets of words from language varieties are preprocessed into automatically inferred cognate sets, and then modeled as information-theoretic variables based on an intuitive measure of cognate overlap. Causal inference is then applied to these variables in order to determine the existence and direction of influence among the varieties. The directed arcs in the resulting graph structures can be interpreted as reflecting the existence and directionality of lexical flow, a unified model which subsumes inheritance and borrowing as the two main ways of transmission that shape the basic lexicon of languages. A flow-based separation criterion and domain-specific directionality detection criteria are developed to make existing causal inference algorithms more robust against imperfect cognacy data, giving rise to two new algorithms. The Phylogenetic Lexical Flow Inference (PLFI) algorithm requires lexical features of proto-

languages to be reconstructed in advance, but yields fully general phylogenetic networks, whereas the more complex Contact Lexical Flow Inference (CLFI) algorithm treats proto-languages as hidden common causes, and only returns hypotheses of historical contact situations between attested languages. The algorithms are evaluated both against a large lexical database of Northern Eurasia spanning many language families, and against simulated data generated by a new model of language contact that builds on the opening and closing of directional contact channels as primary evolutionary events. The algorithms are found to infer the existence of contacts very reliably, whereas the inference of directionality remains difficult. This currently limits the new algorithms to a role as exploratory tools for quickly detecting salient patterns in large lexical datasets, but it should soon be possible for the framework to be enhanced e.g. by confidence values for each directionality decision.

Automatic Disambiguation of Author Names in Bibliographic Repositories Anderson A. Ferreira,Marcos André Gonçalves,Alberto H. F. Laender,2022-06-01 This book deals with a hard problem that is inherent to human language: ambiguity. In particular, we focus on author name ambiguity, a type of ambiguity that exists in digital bibliographic repositories, which occurs when an author publishes works under distinct names or distinct authors publish works under similar names. This problem may be caused by a number of reasons, including the lack of standards and common practices, and the decentralized generation of bibliographic content. As a consequence, the quality of the main services of digital bibliographic repositories such as search, browsing, and recommendation may be severely affected by author name ambiguity. The focal point of the book is on automatic methods, since manual solutions do not scale to the size of the current repositories or the speed in which they are updated. Accordingly, we provide an ample view on the problem of

automatic disambiguation of author names, summarizing the results of more than a decade of research on this topic conducted by our group, which were reported in more than a dozen publications that received over 900 citations so far, according to Google Scholar. We start by discussing its motivational issues (Chapter 1). Next, we formally define the author name disambiguation task (Chapter 2) and use this formalization to provide a brief, taxonomically organized, overview of the literature on the topic (Chapter 3). We then organize, summarize and integrate the efforts of our own group on developing solutions for the problem that have historically produced state-of-the-art (by the time of their proposals) results in terms of the quality of the disambiguation results. Thus, Chapter 4 covers HHC - Heuristic-based Clustering, an author name disambiguation method that is based on two specific real-world assumptions regarding scientific authorship. Then, Chapter 5 describes SAND - Self-training Author Name Disambiguator and Chapter 6 presents two incremental author name disambiguation methods, namely INDi - Incremental Unsupervised Name Disambiguation and INC- Incremental Nearest Cluster. Finally, Chapter 7 provides an overview of recent author name disambiguation methods that address new specific approaches such as graph-based representations, alternative predefined similarity functions, visualization facilities and approaches based on artificial neural networks. The chapters are followed by three appendices that cover, respectively: (i) a pattern matching function for comparing proper names and used by some of the methods addressed in this book; (ii) a tool for generating synthetic collections of citation records for distinct experimental tasks; and (iii) a number of datasets commonly used to evaluate author name disambiguation methods. In summary, the book organizes a large body of knowledge and work in the area of author name disambiguation in the last decade, hoping to consolidate a solid basis for future developments in the field.

Is Sharma a Quiet Don? Sam Venkatesam,2021-10-14 'Is Sharma a Quiet Don?' is the surreal story, rather a high voltage thriller on theft and misuse of nuclear technology under the disguise of Research and Development (R&D). Venkatesh Sharma, a simple South Indian Brahmin is an Expat (Expatriate Executive) business man in Haipon, a nuclear armed country. He lives and works happily in Haipon as a well-recognised and well respected Expat. It all changes one day. Venkatesh realizes that he is quietly drawn into a terrorist intrigue to smuggle some crucial nuclear secrets from a key industry in the US. He scuttles their plans smartly in the last minute. But he gets caught in the vicious dragnet of self-survival which entails his keeping the terrorists happy on one side and helping the Haiponese Government to nab the terrorists at the same time. The terrorists use the hallowed R&D labs of Haipon for their nefarious designs and race to their goal. The game involves high level honchos of Haiponese Government and hence is sophisticated and involved, to say the least. Can Venkatesh Sharma satisfy the hidden agendas of all the stakeholders, namely the terrorists, Haiponese government and himself?

Math Scripts Carol Armstrong Hardee,2022-01-12 Math Scripts: Algebra 1 is a supplemental

resource to any Algebra 1 course. It is designed to allow students to practice solving equations and inequalities studied in Algebra 1 using a script. The script provides word-for-word steps using the rules of equations, inequalities, and order of operations. Students can partner with other students and speak the parts in the script that describes step by step how to solve what is given. They have a great opportunity to write what they are saying, which helps them to process how what they are saying is related to how to denote the solution process symbolically. In other words, they are not only able to say the correct process, but they see how it should be written, building their literacy. There are different levels for each topic, so students can begin at an entry level and continue with more complex scripts. Speaking the language of math by performing math scripts will help your student become more fluent in math.

B Cubed Book 2: Bred Jenna McCormick,2021-04-14 Born: Natural born humans are precious few and dwell in darkness. Bred: Genetically engineered slaves who are the protectors of the Born. Borg: The cybernetically enhanced enclave that split from the Born humans. B Cubed: These three

factions are all that remains of the human race after the world stopped turning. Scavenging in the darkness for what little is left, the war between them rages on though few know why. It begins with a child's prophesy and can only end when they unite. Or die. B Cubed Book Two: Bred Rothguard has but one desire, to rid himself of the overwhelming urge to mate and free his mind to focus on science. Being Bred means to be forever enslaved, to the Born and his own physiological needs. In order to free himself and the Breds still in captivity he requires a Bred female to study. His life as a sex slave taught him about a woman's fickle pleasures, but his work demands more information, no matter how distasteful he might find the chore. Seven years after the mysterious disappearance of her Only One, Mel spends her time tending Bred infants and tormented by the memories of her lost love. When a Cyborg soldier comes for her, Mel's dormant passions surge to life. In his arms she's found what she thought irreparably lost. If only she knew how to prove to Rothguard that her love for him is pure. Will his dark secrets destroy them both? ...a storyline to die for, with scenes that will make you squirm. ~Rasia for You Gotta Read Reviews
