Mental Health Screening and Monitoring for Children in Care Michael Tarren-Sweeney,2018-07-17 Mental Health Screening and Monitoring for Children in Care provides a concise, step-by-step guide for children's agencies on how to carry out mental health screening and monitoring for children and adolescents growing up in alternative care. Michael Tarren-Sweeney outlines unique universal mental health screening and monitoring procedures that can be implemented without the need for clinical training or professional oversight. These procedures reliably identify which children should be referred to clinical services for a comprehensive assessment, and which children do not require further assessment. Informed by recent empirical research carried out with children in foster care in Australia and the Netherlands, these procedures screen the vast majority of children who have clinical-level difficulties for a second-stage assessment, including those with attachment- and trauma-related difficulties, meaning that very few such children remain undetected. This book is an invaluable resource for charitable children's agencies, children's service providers, statutory children's services, children's social workers, and post-adoption support services.

11th US/North American Mine Ventilation Symposium 2006 Jan M. Mutmanský,Raja. V. Ramani,2006-05-18 This volume is the eleventh in a series which documents the technical papers of the mine ventilation symposium, which was initiated in 1982 by the Underground Ventilation Committee of the Society for Mining, Metallurgy, and Exploration, Inc. In more recent years, the event has expanded to include all of North America and is known as the US/North American Mine Ventilation Symposium. The US/North American Mine Ventilation Symposium 2006 designated 'Coal Mine Methane Capture and Utilization' and 'Diesel Issues for Underground and Surface Mines' as topics of special interest. Numerous papers discussed these two topics, and there were presentations on mine dusts, mine fires, ventilation in large-opening mines, and numerous other ventilation topics. The symposium was supplemented by short courses on state-of-the-art in diesel emissions technology, computer analysis of ventilation circuits, personal dust monitoring, and methane capture technology. In addition, field trips to mines, research facilities, and methane gathering sites were offered to participants of the symposium. The book is of special interest to practitioners, educators, and researchers in the field of ventilation of mines, tunnels, and other underground facilities. Includes a CD-ROM of the proceedings.

Clinician's Guide to the Assessment Checklist Series Michael Tarren-Sweeney,2013-10-30 The Assessment Checklist series, created by Michael Tarren-Sweeney, provides the world's first standardised caregiver-report measures of a range of attachment- and trauma-related mental health difficulties experienced amongst children growing up in foster, adoptive, kinship and residential care. This clinical manual provides essential guidance for child and adolescent mental health clinicians who use the Assessment Checklist measures, including the Assessment Checklist for Children (ACC), the

Assessment Checklist for Adolescents (ACA) and the Brief Assessment Checklists (BAC), as part of their specialized assessments of children and adolescents in care. Split into three parts, the book explores all aspects of using and interpreting the Checklist series. Part 1 provides an overview of the Assessment Checklist measures, the rationale for their development and instructions on how to use the measures for clinical assessment, screening and treatment monitoring. Part 2 provides expert guidance to clinicians on interpreting Assessment Checklist score profiles and provides detailed information about several specific types of mental health difficulties measured by them. Part 3 describes the development and psychometric properties of the various Assessment Checklist measures, including information about their validity and reliability. It also introduces several new measures that are under development. Ideal for clinical child psychologists, child and adolescent psychiatrists, child psychotherapists and clinical social workers looking to improve the quality and depth of their clinical assessments with children and adolescents, this book provides essential guidance on professional use of the Assessment Checklist measures.

Biomag 96 Cheryl J. Aine,Yoshio Okada,Gerhard Stroink,Stephen J. Swithenby,Charles C. Wood,2013-11-11 A modified Linear Estimation Approach was performed to reconstruct current sources within the heart. Based on MRI data sets the Boundary Element Method was used to create tailored multicompartment models of the human thorax which were used to solve the forward problem of magnetocardiography. The ability of the proposed method was demonstrated for the localization of a single current dipole as an example of a focal source. By means of introducing small shiftings to all reconstruction dipoles during linear estimation solution as well as performing a successive focussing strategy ignoring places without significant electrical activity the method could easily be extended to the reconstruction of real 3D sources. Based on a special minimum-norm solution the source volume can be estimated applying a finite element approximation using cube elements. The size of an extended current source can be estimated by superimposing the reconstructed dipoles to an equivalent dipole and comparing the corresponding volume with the sphere which would be related to the equivalent dipole. The deviation of these volumes can be taken as a criterion for non-dipolarity of sources.
