But what can you do when you have a deck of cards, a wish to play, and nobody to play with? Author Robert Allen has the answer in this unusual book that presents rules and variations for 100 different fascinating and challenging solitaire card games--but there's still more! You'll also find approximately 400 coin games, matchstick puzzles, logic puzzles, crosswords, and memory games. More Do-It-Yourself Java Games Annette Godtland, 2015-11-08 *More Do-It-Yourself Java Games: An Introduction to Java Graphics and Event-Driven Programming* is the second book of the Do-It-Yourself Java Games series. In event-driven programming, the program lays out all the game pieces then waits. The user then takes an action and the program responds to that action, whatever that action may be, and in whatever order the actions are taken. You'll learn to create windows and dialogs, to add buttons and input fields, to use images and drawings, and to respond to keyboard input and mouse clicks and drags. You'll create 10 more games including several puzzles, a maze, a dice game, a word game, a card game, and an image resizer program. This book assumes you either have an understanding of basic Java programming or you have read the first book, *Do-It-Yourself Java Games: An Introduction to Java Computer Programming*. The Do-It-Yourself Java Games series of books uses a unique discovery learning approach to teach computer programming: learn Java programming techniques more by doing Java programming than by reading about them. Through extensive use of fill-in blanks, with answers at the back of the book, you will be guided to write complete programs yourself, starting with the first lesson. You'll create puzzle and game programs and discover how, when, and why Java programs are written the way they are.

Advanced Do-It-Yourself Java Games Annette Godtland, 2016-08-16 *Advanced Do-It-Yourself Java Games: An Introduction to Java Threads and Animated Video Games* is the third book of the Do-It-Yourself Java Games series. The previous book in the series, *More Do-It-Yourself Java Games*, taught event-driven programming. Those games started with an initial window, then waited for the program user to take an action. The games in this book require the same kind of event-driven user interfaces, but add threads to perform automated, simultaneous activity, whether the user takes an action or not. You'll learn more advanced programming techniques as you create 8 new games with sound and animation. You'll learn to use abstract classes, interfaces, state-driven programming, and the model/view/controller design. This book assumes you either have experience creating event-driven

user interfaces with Java Swing or you have read the second book, More Do-It-Yourself Java Games: An Introduction to Java Graphics and Event-Driven Programming. The Do-It-Yourself Java Games series of books uses a unique discovery learning approach to teach computer programming: learn Java programming techniques more by doing Java programming than by reading about them. Through extensive use of fill-in blanks, with easy one-click access to answers, you will be guided to write complete programs yourself, starting with the first lesson. You'll create puzzle and game programs and discover how, when, and why Java programs are written the way they are.

Economics in One Lesson Henry Hazlitt, 2010-08-11 With over a million copies sold, Economics in One Lesson is an essential guide to the basics of economic theory. A fundamental influence on modern libertarianism, Hazlitt defends capitalism and the free market from economic myths that persist to this day. Considered among the leading economic thinkers of the "Austrian School," which includes Carl Menger, Ludwig von Mises, Friedrich (F.A.) Hayek, and others, Henry Hazlitt (1894-1993), was a libertarian philosopher, an economist, and a journalist. He was the founding vice-president of the Foundation for Economic Education and an early editor of The Freeman magazine, an influential libertarian publication. Hazlitt wrote Economics in One Lesson, his seminal work, in 1946. Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to dissemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of Economics in One Lesson. Hazlitt's focus on non-governmental solutions, strong — and strongly reasoned — anti-deficit position, and general emphasis on free markets, economic liberty of individuals, and the dangers of government

intervention make Economics in One Lesson every bit as relevant and valuable today as it has been since publication.

The Road Jack London, 2019-06-17 "The Road" is a 1907 autobiographical memoir by American writer Jack London. Within it, London recounts his experience of being homeless during the 1890 depression in the United States. He tells of his having to hop freight trains, beg to survive, his various run-ins with the police, and much more in an interesting and insightful account of life during an economic depression. This volume will appeal to those with an interest in the depression of the late nineteenth century, and it is not to be missed by fans and collectors of London's seminal work. John Griffith London (1876 – 1916), commonly known as Jack London, was an American journalist, social activist, and novelist. He was an early pioneer of commercial magazine fiction, becoming one of the first globally-famous celebrity writers who were able to earn a large amount of money from their writing. London is famous for his contributions to early science fiction and also notably belonged to The Crowd, a literary group in San Francisco known for its radical members and ideas. Many vintage books such as this are increasingly scarce and expensive. We are republishing this volume now in an affordable, modern, high-quality edition complete with a specially-commissioned new biography of the author.
