A History of Modern Computing, second edition Paul E. Ceruzzi,2003-04-08 From the first digital computer to the dot-com crash—a story of individuals, institutions, and the forces that led to a series of dramatic transformations. This engaging history covers modern computing from the development of the first electronic digital computer through the dot-com crash. The author concentrates on five key moments of transition: the transformation of the computer in the late 1940s from a specialized scientific instrument to a commercial product; the emergence of small systems in the late 1960s; the beginning of personal computing in the 1970s; the spread of networking after 1985; and, in a chapter written for this edition, the period 1995-2001. The new material focuses on the Microsoft antitrust suit, the rise and fall of the dot-coms, and the advent of open source software, particularly Linux. Within the chronological narrative, the book traces several overlapping threads: the evolution of the computer's internal design; the effect of economic trends and the Cold War; the long-term role of IBM as a player and as a target for upstart entrepreneurs; the growth of software from a hidden element to a major character in the story of computing; and the recurring issue of the place of information and computing in a democratic society. The focus is on the United States (though Europe and Japan enter the story at crucial points), on computing per se rather than on applications such as artificial intelligence, and on systems that were sold commercially and installed in quantities.

Modern Exterior Ballistics Robert L. McCoy,2012 Modern Exterior Ballistics is a comprehensive text covering the basic free flight dynamics of symmetric projectiles. The book provides a historical perspective of early developments in the 19th century, the technology leading to World War I and that through World War II into the modern post-war era. Historical topics include the first ballistic firing tables, early wind tunnel experiments, the development of free flight spark ranges and the first supercomputer, ENIAC, which was designed to compute artillery trajectories for the U.S. Army Ballistic Research Laboratory. The level of the text requires an undergraduate education in mathematics, physics, and mechanical or aerospace engineering. The basic principles of ballistic science are developed from a comprehensive definition of the aerodynamic forces that control the flight dynamics of symmetric projectiles. The author carefully starts with the basic vacuum point mass trajectory, adds the effects of drag, discusses the

action of winds, simple flat fire approximations, Coriolis effects and concludes with the classic modified point mass trajectories. Included in the discussion are analytical methods, change of variables from time to distance, numerical solutions and a chapter on the Siacci Method. The Siacci Method provides a historical perspective for computing flat fire trajectories by simple quadrature and is used in the sporting arms industry. The final six chapters of the book present an extensive physical and mathematical analysis of the motion of symmetric projectiles. The linearized equations of angular and swerving motion are derived in detail. The effects of mass asymmetry, in-bore yaw, cross wind and launch in a slipstream are discussed. Special consideration is given to the derivation and explanation of aerodynamic jump. These subjects are then expanded to include a complete chapter on nonlinear aerodynamic forces and moments. The final chapter in the book presents an overview of experimental methods for measuring the flight dynamics of projectiles. The great forte of *Modern Exterior Ballistics* is the author's effort to provide many fine specific examples of projectile motion illustrating key flight behaviors. The extensive collection of data on projectiles from small arms to artillery used to substantiate calculations and examples is alone a valuable reference. The ultimate joy of the book is the incomparable comprehensive set of flow field shadow graphs illustrating the entire spectrum of projectile flight from subsonic, through transonic and supersonic. The volume is a necessary addition to any undergraduate or graduate course in flight dynamics.

Nonsymmetric Ballistic Range, Height, Time-of-flight and Optimal Flight Path Angle Computations with Programs for a Hewlett-Packard 65 Calculator Rex H. Shudde, Naval Postgraduate School (U.S.), 1976 The purpose of this report is to provide the equations and HP-65 Programmable Calculator programs for computing ballistic range, height, time-of-flight, and particularly the flight path angle which maximizes ballistic ranges for non-symmetric launch and target positions. A no-atmosphere, non-rotating, spherical Earth is assumed. (Author).

Selected papers from the 2019 IEEE International Workshop on Metrology for AeroSpace Pasquale Daponte, Eulalia Balestrieri, 2021-04-21 This book is devoted to recent developments of instrumentation and measurement techniques applied to the aerospace field. It includes 23 selected papers from the 2019 IEEE International Workshop on Metrology for AeroSpace. Measurements are essential for obtaining a deeper knowledge of a phenomenon or an asset, as well as for making proper decisions and proposing new and efficient solutions, and this is especially true in environments as complex as aerospace. The research contributions included in the book can raise the interest of a wide group of researchers, operators and decision-makers from metrology and aerospace fields by presenting the most innovative solutions in this field from the scientific and technological points of view.

The Home Schooled Shootist: Training to Fight with a Carbine Joe Nobody, 2012-08-20 This work is an instruction guide for intermediate to advanced shooters. It addresses fighting with shoulder-fired weapons at ranges 0 through 600 meters. The book assumes the reader has mastered basic remedial techniques and is fully versed in firearm safety. In order to ensure the buyer's skills match the difficulty of the included exercises, a video preview showing limited examples has been created. It can be found at www.holdingyourground.com or via other common sources for internet videos. A search of "Home Schooled Shootist" should generate several options. This work is divided into three basic sections: - How to create and execute eleven different drills that sharpen skills necessary to survive violent encounters - How to evaluate the results of these exercises - How to improve the operator's capabilities Covering topics ranging from sight pictures, on-range and off-range training techniques, and even rifle specific weight training, Shootist is intended for those who want to train at their own pace, using their own facilities. The drills are creative, unique and can be challenging. Detailed instructions are included on how to construct the various training tools and courses. In addition, a bonus section covering nutrition and its impact on shooting skills is included. Written by Mike Adams - The Health Ranger, it addresses the seldom-discussed topic of how physical health can impact fighting skills.

Exterior Ballistics with Applications Gjergj Klimi, 2008-07-30 Exterior Ballistics with Applications Skydiving, Parachute Fall, Flying Fragments presents a modern approach to introduce the basics of exterior ballistics and its methods from the simple ideal model of projectile motion to the automatic solution of the differential equations of projectile flight using PC programs. The book uses different approaches to solve the differential equations of projectile motion among them the Siacci method and the numerical methods. The results obtained through the integration of differential equations of projectile flight are mostly analytical formulas that describe the projectile trajectory and make the exterior ballistics a comprehensible science. The Differential Equations of Projectile Flight are also integrated numerically using some original PC programs that can be easily modified to be

used in similar scenarios or other new ones and give the reader the possibility to solve a great variety of Exterior Ballistics problem. Exterior Ballistics with Applications can be considered as an interdisciplinary applied mathematics and physics manuscript for the vast mathematics and physics models and techniques employed. It is a great source for applications in physics, calculus, differential equations, numerical methods, and PC programming as well. The book is illustrated with about 140 solved examples related to different artillery and infantry firearms that demonstrate the use of formulas and the solution methods of ballistics to find the elements of projectile trajectories. Exterior Ballistics with Applications includes as well two interesting topics that can be considered as applications of exterior ballistics: 1. Skydiving and parachute falling related with the trajectory of a parachutist launched from a horizontally flying airplane with un-deployed parachute, in different meteorological conditions, and in presence of air resistance and wind. 2. The ballistics of projectile fragments that is an important element of Terminal Ballistics necessary to study the effectiveness of fragmentation ammunitions on the personnel and objects, and other problems related with the construction of fragmentation ammunitions, or with Forensic Sciences. Exterior Ballistics with Applications is comprehensive and serves as reference material to provide answers to problems encountered in the practice of motion of unguided projectiles, skydiving and flying fragments of antipersonnel ammunitions.

Learned Dependency Citizen Kim, 2021-06-21 This book examines the insights of a common man as he examines problems within our country and problems people most deal with on a daily basis. Did you know that our country is over \$20 trillion in debt? The average American can't even comprehend how many zeros that is. How did we accumulate that much debt, and how do seemingly intelligent people make similar life-altering mistakes in their personal lives? Why do people scream "Defund the police!" yet immediately dial 911 when it's their own personal safety at risk? Why must government entities solve our personal problems? Are you capable of logical and rational thinking? Do you see yourself as being self-sufficient, resilient, and capable of solving your own problems? If so you, you have taken the first steps to independence, self-worth, and personal success. Are you willing to accept the challenges of thinking for yourself and being responsible for your own well-being and success? Do you object to your hard-earned money being wasted on taxes and government programs designed to make totally capable people dependent on the government and others? If you want an everyday workingman's answers to these questions then take up the challenge, open the front cover, and let's see what happens.
