Automated Teller Machine Network Market Structure and Cash Usage Heli Snellman, Suomen Pankki, 2006 This study discusses the effects of the Automated Teller Machine (ATM) network market structure on the availability of cash withdrawal ATM services and cash usage. The aim and novelty of the study is to construct the ATM equation. The study also contributes to the earlier discussion on the effects of ATMs on cash usage. The monopolisation of ATM network market structure and its effects on the number of ATMs and on cash in circulation are analysed both theoretically and empirically. The unique annual data set on 20 countries used in the estimations has

been combined from various data sources. The observation period is 1988-2003, but the data on some countries are available only for a shorter period. Based on our theoretical discussion, as well as the estimation results, monopolisation of the ATM network market structure is associated with a smaller number of ATMs. Furthermore, the influence of the number of ATMs on cash in circulation is ambiguous.

Compatibility and Pricing with Indirect Network Effects

Christopher R. Knittel, Victor Stango, 2003 Incompatibility in markets with indirect network effects can affect prices if consumers value mix and match combinations of complementary network components. In this paper, we examine the effects of incompatibility using data from a classic market with indirect network effects: Automated Teller Machines (ATMs). Our sample covers a period during which higher

ATM fees increased incompatibility between ATM cards (which are bundled with deposit accounts) and other banks' ATM machines. A series of hedonic regressions suggests that incompatibility strengthens the relationship between deposit account pricing and own ATMs, and weakens the relationship between deposit account pricing and competitors' ATMs. The effects of incompatibility are stronger in areas with high population density, suggesting that high travel costs increase both the strength of network effects and the importance of incompatibility in ATM markets.

Cyberpsychology in the Tech-Fed Virtual World Dr. V. Sharmila, For a wide variety of reasons, colleges and universities have increased their online course offerings. These programs, including both formal degree programs as well as non-credit and leisure learning options, rely on students to engage with their faculty members as well as other learners to maximize their class experiences. Virtual learning, however, can be a difficult space to create community and resulted in the need to explore how community and culture can be constructed in the virtual, tech-fed world. The model presented here consists of five key elements that program administrators, instructional designers, and teaching faculty must all take into consideration as they develop their courses.
