Impulse Dave Bara,2015-02-03 With his critically acclaimed military science fiction debut series, Dave Bara launched readers on a star-spanning journey of discovery, diplomacy, and danger. Lieutenant Peter Cochrane of the Quantar Royal Navy believes he has his future clearly mapped out. It begins with his new assignment as an officer on Her Majesty's Spaceship Starbound, a Lightship bound for deep space voyages of exploration. But everything changes when Peter is summoned to the office of his father, Grand Admiral Nathan Cochrane, and given devastating news: the death of a loved one. In a distant solar system, a mysterious and unprovoked attack upon Lightship Impulse resulted in the deaths of Peter's former girlfriend and many of her shipmates. Now Peter's plans are torn asunder as he is transferred to a Unified Space Navy ship under foreign command, en route to an unexpected destination, and surrounded almost entirely by strangers. To top it off, his superiors have given him secret orders that might force him to become a mutineer. The crisis at hand becomes a gateway to something much more when the ship's Historian leads Peter and his shipmates into a galaxy of the unknown -- of ancient technologies, age-old rivalries, new cultures, and unexpected romance. It's an overwhelming responsibility for Peter, and one false step could plunge humanity into an apocalyptic interstellar war....

Camp Songs, Folk Songs Patricia Averill,2014-05-27 Description and analysis of a folk tradition that long has been a rite of passage for children and adolescents. In depth discussion of 19 songs, brief mention of 1,400 others. 65 historic photographs.

Ginger Rogers Jocelyn Faris,1994-03-14 Though chiefly remembered as the dance partner of Fred Astaire, Ginger Rogers had many other significant achievements in the entertainment world. She was a dancer, singer, comedienne, and Academy Award winning dramatic actress, as well as the highest paid Hollywood star in 1942. Miss Faris provides a detailed record of Ginger Roger's life and career, painting a picture of her as one of the most versatile performers in the United States. The volume begins with a short biography of Ginger Rogers, along with a succinct chronology of the major events in her life and career. These portions of the book provide a context for the chapters that follow, which contain annotated entries for her stage, film, radio, and television performances. The entries provide production information and cast listings, along with excerpts from reviews and critical commentaries. An extensive annotated bibliography lists books, magazine and newspaper articles, and movie trade publications that provide further information about Ginger Rogers's fascinating career.

Advanced Mechatronics and MEMS Devices Dan Zhang,2012-09-14 Advanced Mechatronics and MEMS Devices describes state-of-the-art MEMS devices and introduces the latest technology in electrical and mechanical microsystems. The evolution of design in microfabrication, as well as emerging issues in nanomaterials, micromachining, micromanufacturing and microassembly are all discussed at length in this volume. Advanced Mechatronics also provides a reader with knowledge of MEMS sensors array, MEMS multidimensional accelerometer, artificial skin with imbedded tactile components, as well as other topics in MEMS sensors and transducers. The book also presents a number of topics in advanced robotics and an abundance of applications of MEMS in robotics, like reconfigurable modular snake robots, magnetic MEMS robots for drug delivery and flying robots with adjustable wings, to name a few.

Modelling, Simulation and Control of Thermal Energy Systems Kwang Y. Lee,Damian Flynn,Hui Xie,Li Sun,2020-11-03 Faced with an ever-growing resource scarcity and environmental regulations, the last 30 years have witnessed the rapid development of various renewable power sources, such as wind, tidal, and solar power generation. The variable and uncertain nature of these resources is well-known, while the utilization of power electronic converters presents new challenges for the stability of the power grid. Consequently, various control and operational strategies have been proposed and implemented by the industry and research community, with a growing requirement for flexibility and load regulation placed on conventional thermal power generation. Against this background, the modelling and control of conventional thermal engines, such as those based on diesel and gasoline, are experiencing serious obstacles when facing increasing environmental concerns. Efficient control that can fulfill the requirements of high efficiency, low pollution, and long durability is an emerging requirement. The modelling, simulation, and control of thermal energy systems are key to providing innovative and effective solutions. Through applying detailed dynamic modelling, a thorough understanding of the thermal conversion mechanism(s) can be achieved, based on which advanced control strategies can be designed to improve the performance of the thermal energy system, both in economic and environmental terms. Simulation studies and test beds are also of great significance for these research activities prior to proceeding to field tests. This Special Issue will contribute a practical and comprehensive forum for exchanging novel research ideas or empirical practices that bridge the modelling, simulation, and control of thermal energy systems. Papers that analyze particular aspects of thermal energy systems, involving, for example, conventional power plants, innovative thermal power generation, various thermal engines, thermal energy storage, and fundamental heat transfer

management, on the basis of one or more of the following topics, are invited in this Special Issue:

- Power plant modelling, simulation, and control;
- Thermal engines;
- Thermal energy control in building energy systems;
- Combined heat and power (CHP) generation;
- Thermal energy storage systems;
- Improving thermal comfort technologies;
- Optimization of complex thermal systems;
- Modelling and control of thermal networks;
- Thermal management of fuel cell systems;
- Thermal control of solar utilization;
- Heat pump control;
- Heat exchanger control.
