It has gone from gold to coins, paper money to plastic cards and now with Google's venture into the mobile payment industry, we are at the threshold of the next big shift. Google Wallet is a mobile payment Android app that transforms a phone into a wallet. This app utilizes the Near Field Communication (NFC) technology that allows its users to pay for purchased items and redeem offers. At this initial stage of business, there are many features and factors that Google needs to change in order to bring about the mass adoption of this service. As the Business Technology Analysts at Google, we - Kritika Maheshwari, Malvika Saraf and Rohan Handa aim at addressing the hurdles for this technology and the methods to bring it to fruition. In the process we evaluate Google's profit motivation and the bigger strategy behind this service. First, we explain the business approach which describes the importance of the adopted business model. We use Porter's Five Force analysis to determine the competitive intensity in the market followed by SWOT analysis to give recommendations that will help in the mass adoption. Finally, we focus our paper on formulating a strategy canvas in order to study the existing payment methods in comparison to our service. The paper concludes with recommendations to Google for promoting wide customer acceptance.

Critical Success Factors of Mobile Payments Christian Hort, 2003-03-24 Scientific Essay from the year 2002 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: 1,0 (A), Technical University of Darmstadt (Finance and Banking Management (TUD); Institute of Information Management (HSG)), 147 entries in the bibliography, language: English, abstract: In the context of this research, payment is understood as the exchange of monetary value between participants either directly or using an intermediary.<sup>5</sup> Mobile payment (mPayment) can be understood as every payment where at least one participant applies mobile phone technology, thus, uses a mobile phone.<sup>6</sup> But due to technological progress it seems reasonable to classify other devices like a Personal Digital Assistant (PDA) or devices with embedded Radio Frequency (RF) technology as mobile payment devices.<sup>7</sup> However, mobile phones today clearly outnumber every other mobile payment device. Penetration rates<sup>8</sup> are forecasted to reach almost 80% in Europe by 2005.<sup>9</sup> The number of worldwide cellular subscribers is expected to pass one billion by 2003.<sup>10</sup> By 2005 there will be more mobile phones worldwide than TVs, fixed line phones, and Personal Computers (PC).<sup>11</sup> Driven by the increasing penetration and resulting business opportunities, numerous mPayment solutions have been offered by payment service providers, telcos, and financial institutions. The variety of applicable technologies, the possible linkage between the financial instruments, and the mPayment device combined with different payment scenarios offer a wide landscape of mPayment solutions. Besides technology, questions dealing with consumer expectations, factors thriving or inhibiting a widespread adoption, and with its related penetration strategies for payment service providers have to be carefully researched to develop a successful mPayment.<sup>12</sup> <sup>5</sup> See Dahlberg/Mallat (2002) p. 651. <sup>6</sup> See Krueger (2001) p. 1; see IWW (2002a) p. 5; see Kreyer/Pousttchi/Turowski (2002) p. 1 f. <sup>7</sup> See Thing/Rouse (2001); cp. chapter 3.2. <sup>8</sup> Users as a percentage of the population. <sup>9</sup> See Barnett/Hodges/Wilshire (2000) p. 164. <sup>10</sup> See Barnett/Hodges/Wilshire (2000) p. 164; see Krueger (2001) p. 3; see GSM Association (2002b). <sup>11</sup> See Datta/Pasa/Schnitker (2001) p. 72. <sup>12</sup> See Dahlberg/Mallat (2002) p. 650.

**TRUSTING MOBILE PAYMENT** Andrea Bauer, 2017-07-18 In this book Andrea Bauer examines the apparently simple question of the role of trust in the development and establishment of mobile payment services. The proliferation of new payment instruments was always associated with the condition of trustworthiness. Even if the form of payment has changed constantly in the past (e.g. cowrie shells, stones, coins, paper notes, plastic cards or electronic digits), the demand for trustworthiness was always an essential factor regarding its market acceptance. What trust exactly is, which functions trust has in the use of technical solutions and which aspects and determinants of trust are crucial regarding mobile payment services, Andrea Bauer will analyze in the present work.

It processed more than \$10 billion annually in credit and debit card payments from small business owners that used Square's smartphone-enabled card swipe device wherever cellular or wireless Internet services were available. However, Square's success had attracted new entrants into the mobile payments processing space, both in the United States and abroad, threatening to derail the company's remarkable trajectory. With its latest financing round valuing the company in excess of \$3.4 billion, management and investors were considering which strategies would continue, even accelerate, the company's growth.

**Mobile Payments, Consumer Policy and the Law** Nwanneka Ezechukwu,2023-03-17 Mobile technology offers an innovative and cost-effective channel for delivering a range of financial services, including mobile payments. In other jurisdictions, mobile payments are viewed as potentially transformative because they present an opportunity to expand access to financial services. However, as with other innovations, mobile payments raise consumer protection concerns and require robust regulatory mechanisms to address such concerns. Against this backdrop, the book adopts a typology of consumer policy tools which can be used to address the identified consumer concerns. This typology guides the enquiry into the existing consumer protection frameworks applying to mobile payments in selected jurisdictions (Canada, Kenya, and the United Kingdom). The main objective of this endeavour is to identify best practices that national authorities seeking to leverage mobile payments and similar innovations can emulate. This book will be of interest to policymakers, regulators, industry stakeholders, students and scholars interested in the regulation of innovative financial services, particularly from a consumer protection perspective.
