Hey! Listen! Andrew S. Latham,2024-02-09 How does analyzing video games as hypertexts expand the landscape of research for video game rhetoricians and games studies scholars? This is the first book to focus on how hypertext rhetoric impacts the five canons of rhetoric, and to apply that hypertext rhetoric to the study of video games. It also explores how ludonarrative agency is seized by players seeking to express themselves in ways that game

makers did not necessarily intend when making the games that players around the world enjoy. This book takes inspiration from The Legend of Zelda, a series which players all over the world have spent decades deconstructing through online playthroughs, speedruns, and glitch hunts. Through these playthroughs, players demonstrate their ability to craft their own agency, independent of the objectives built by the makers of these games, creating new rhetorical situations worthy of analysis and consideration.

Von Braun Michael Neufeld,2017-04-12 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun. Chief rocket engineer of the Third Reich and one of the fathers of the U.S. space program, Wernher von Braun is a source of consistent fascination. Glorified as a visionary and vilified as a war criminal, he was a man of profound moral complexities, whose intelligence and charisma were coupled with an enormous and, some would say, blinding ambition. Based on new sources, Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V-2 rocket and his times, detailing how he was a man caught between morality and progress, between his dreams of the heavens and the earthbound realities of his life.

The Crowded Universe Alan Boss,2010-11 We are nearing a turning point in our quest for life in the universe - we now have the capacity to detect Earth-like planets around other stars. But will we find any? In *The Crowded Universe*, renowned astronomer Alan Boss argues that based on what we already know about planetary systems, in the coming years we will find abundant Earths, including many that are indisputably alive. Life is not only possible elsewhere in the universe, Boss argues - it is common. Boss describes how our ideas about planetary formation have changed radically in the past decade and brings readers up to date on discoveries of bizarre inhabitants of various solar systems, including our own. America must stay in this new space race, Boss contends, or risk being left out of one of the most profoundly important discoveries of all time; the first confirmed finding of extraterrestrial life.
