Defining the Wind Scott Huler,2007-12-18 “Nature, rightly questioned, never lies.” –A Manual of Scientific Enquiry, Third Edition, 1859 Scott Huler was working as a copy editor for a small publisher when he stumbled across the Beaufort Wind Scale in his Merriam Webster Collegiate Dictionary. It was one of those moments of discovery that writers live for. Written centuries ago, its 110 words launched Huler on a remarkable journey over land and sea into a fascinating world of explorers, mariners, scientists, and writers. After falling in love with what he decided was “the best, clearest, and most vigorous piece of descriptive writing I had ever seen,” Huler went in search of Admiral Francis Beaufort himself: hydrographer to the British Admiralty, man of science, and author–Huler assumed–of the Beaufort Wind Scale. But what Huler discovered is that the scale that carries Beaufort’s name has a long and complex evolution, and to properly understand it he had to keep reaching farther back in history, into the lives and works of figures from Daniel Defoe and Charles Darwin to Captains Bligh, of the Bounty, and Cook, of the Endeavor. As hydrographer to the British Admiralty it was Beaufort’s job to track the information that ships relied on: where to lay anchor, descriptions of ports, information about fortification, religion, and trade. But what came to fascinate Huler most about Beaufort was his obsession for observing things and communicating to others what the world looked like. Huler’s research landed him in one of the most fascinating and rich periods of history, because all around the world in the mid-eighteenth and nineteenth centuries, in a grand, expansive period, modern science was being invented every day. These scientific advancements encompassed not only vast leaps in understanding but also how scientific innovation was expressed and even organized, including such enduring developments as the scale Anders Celsius created to simplify how Gabriel Fahrenheit measured temperature; the French-designed metric system; and the Gregorian calendar adopted by France and Great Britain. To Huler, Beaufort came to embody that passion for scientific observation and categorization; indeed Beaufort became the great scientific networker of his time. It was he, for example, who was tapped to lead the search for a naturalist in the 1830s to accompany the crew of the Beagle; he recommended a young naturalist named Charles Darwin. Defining the Wind is a wonderfully readable, often humorous, and always rich story that is ultimately about how we observe the forces of nature and the world around us.

Encyclopedia of World Climatology John E. Oliver,2008-04-23 Today, given the well-publicized impacts of events such as El Niño, there is an unequaled public awareness of how climate affects the quality of life and environment. Such awareness has created an increasing demand for accurate climatological information. This information is now available in one convenient, accessible source, the Encyclopedia of World Climatology. This comprehensive volume covers all the main subfields of climatology, supplies information on climates in major continental areas, and explains the intricacies of climatic processes. The level of presentation will meet the needs of specialists, university students, and educated laypersons. A successor to the 1986 Encyclopedia of Climatology, this compendium provides a clear explanation of current knowledge and research directions in modern climatology. This new encyclopedia emphasizes climatological developments that have evolved over the past twenty years. It offers more than 200 informative articles prepared by 150 experts on numerous subjects, ranging from standard areas of study to the latest research studies. The relationship between climatology and both physical and social science is fully explored, as is the significance of climate for our future well-being. The information is organized for speedy access. Entries are conveniently arranged in alphabetical order, thoroughly indexed, and cross-referenced. Every entry contains useful citations to additional source materials. The Editor John E. Oliver is Professor Emeritus at Indiana State University. He holds a B.Sc. from London University, and a MA and Ph.D from Columbia University. He taught at Columbia University and then at Indiana State where he was formerly Chair of the Geography-Geology Department, and Associate Dean, College of Arts and Sciences. He has written many books and journal articles in Climatology, Applied Climatology and Physical Geography.

An Exploration of the Origin and Persistence of the Beaufort Wind Force Scale Blair Kinsman,1968 A discussion of the history and meaning of the original Beaufort wind force scale is presented and compared with a recent version. Some account of the accidents that have kept the Beaufort scale current after 160 years and the comedy of providing wind velocity equivalents is given. It is suggested that perhaps the time has come to return the Beaufort force scale to the seamen from whom it was borrowed. (Author).

Hear the Wind Blow Doe Boyle,2021-03-01 Chicago Public Library Best Informational Books for Younger Readers 2021 The Best Children's Books of the Year 2022, Bank Street College STARRED REVIEW! An artful blend of language, illustration, and science.–Kirkus Reviews starred review You can almost feel the wind in this explanation of the Beaufort scale, with science and rhythmic verse. The stages of the Beaufort wind scale, portrayed with precision and also with poetic free verse, style, and imagination. It will stretch readers' imaginations as we see the wind pick up from a kiss of air, to a gentle breeze that shivers the shifting grasses, to a roiling hurricane that makes tree roots shudder.

Close to the Wind Peter Malone,2007 Describes Francis Beaufort's creation of the Beaufort wind force scale in 1810. Presents fictional diary entries by a twelve-year-old midshipman that describe conditions aboard ship at each of the scale's twelve levels. Includes facts on the construction of a man-of-war and the daily lives of English sailors.

The Secret of Running Hans van Dijk,Ron van Megen,2017-05-01 How much power does your human engine have? How much power do you need for running in different conditions? How can you optimize your training and racing performance? How can you use power meters to improve your results? What are the ultimate limits of human performance? The Secret of Running answers all of these questions. All factors determining the performance in running (from 800-meter race to marathon) are explained step by step: training, nutrition, body weight, running form, wind, hills, temperature, running gear, power meters and much more. Written in a crystal-clear and lively style, this book is a wealth of information for every ambitious runner. This title also contains brand new insights on how the balance of the power of your human engine and the power requirement for running in different conditions determines your performance. It shows how power meters can be used to optimize your training, running economy and race result. This book is lavishly illustrated and packed with useful data. Being already a bestseller in the Netherlands and Belgium, The Secret of Running can be considered the ultimate textbook for all serious runners and their coaches.

Wind Forces in Engineering Peter Sachs,2013-10-22 Wind Forces in Engineering, Second Edition covers the various aspects, principles, and engineering applications of wind forces. This book is composed of 10 chapters and starts with an introduction to the history of wind forces. The subsequent chapters consider the wind speeds for various topographies; particular shape factors for general and special structures; oscillatory wind forces of a random or single-frequency type; and the dynamic

response of structures to oscillatory wind forces. Other chapters deal with specific structures, such as buildings, bridges, towers, radar antennas, for static and dynamic wind loadings. The final chapter provides the Code of Practice which has been republished since 1972, including those for Australia, Canada, Great Britain and the U.S.A. These codes do not provide similar responses and are all essentially in a transitional state between the old static force concept and an improved statistical analysis to be based on more experimental evidence. This book will prove useful to engineers and researchers.

The Encyclopedia of Beaches and Coastal Environments M. Schwartz,1982 This book should be of interest to geologists; biologists; environmentalists; ecologists; engineers; lecturers and students in related subjects; libraries.

The Weather Experiment Peter Moore,2015-06-02 A history of weather forecasting, and an animated portrait of the nineteenth-century pioneers who made it possible By the 1800s, a century of feverish discovery had launched the major branches of science. Physics, chemistry, biology, geology, and astronomy made the natural world explicable through experiment, observation, and categorization. And yet one scientific field remained in its infancy. Despite millennia of observation, mankind still had no understanding of the forces behind the weather. A century after the death of Newton, the laws that governed the heavens were entirely unknown, and weather forecasting was the stuff of folklore and superstition. Peter Moore's The Weather Experiment is the account of a group of naturalists, engineers, and artists who conquered the elements. It describes their travels and experiments, their breakthroughs and bankruptcies, with picaresque vigor. It takes readers from Irish bogs to a thunderstorm in Guanabara Bay to the basket of a hydrogen balloon 8,500 feet over Paris. And it captures the particular bent of mind—combining the Romantic love of Nature and the Enlightenment love of Reason—that allowed humanity to finally decipher the skies.

Rescue in the Pacific: A True Story of Disaster and Survival in a Force 12 Storm Tony Farrington,1998-03-22 In June of 1994 a dangerous bomb storm caught dozens of cruising sailors by surprise as they voyaged north from New Zealand. This is the true story of how nine yachts struggled to survive the hurricane-like conditions. Boats were battered by fierce winds and capsized by seas towering well over 50 feet high. Equipment was ripped loose, and water penetrated every weak point. Masts collapsed, rudders broke, and sailors lost steering control when they needed it most. The crews coped as best they could with injury, fear, exhaustion, and illness. Their electronic calls for help were picked up by satellites and radio operators, who initiated a massive air and sea search. This is the story of heroic rescues, human endurance, and tragic loss.
