Bee-Culture F. A. Jacobsen, 2015-06-13 Excerpt from Bee-Culture The advice here given, though it concerns chiefly beginners who contemplate taking up bee-culture as a business, applies also to those who merely wish to keep a few hives of bees as a hobby and to work them successfully. Any person may become a beekeeper, but to become a bee-master the aspirant must possess more than an ordinary share of patience and perseverance, and also be prepared to give the subject of bee-culture his most careful study. He should be discerning and resourceful, have good judgment, with keen insight to anticipate and be swift to take advantage of all circumstances likely to lead to success - in short, he should possess just such qualities as would contribute to his prosperity in any line of life. Procrastination is a serious imperfection under all circumstances, and especially so in bee-culture: bee-work cannot be put off without great loss; it must be done when needed; in fact, it should be anticipated - a bee-master always keeps a little ahead of his bees. It must be distinctly understood that successful bee-farming cannot be carried on

without a good deal of work and close application, but, as the work to a bee-master is both interesting and congenial, it is never irksome. All bee-masters are enthusiasts in their calling; hence, in a great measure, their success. It may be said of those adapted for beekeeping that once a beekeeper always a beekeeper, for about the work there is undoubtedly, in spite of the stings, a charm which, once experienced, never loses its attractions. Bee-culture is a rapidly progressive industry; new methods and appliances are constantly coming to the front, and things that are new to-day may be obsolete to-morrow. It therefore behoves the beekeeper to keep himself posted in everything going on in the beekeeping world through the excellent bee literature now at command. Who should not keep Bees. All beginners suffer more or less from the effects of bee-stings, but in most cases the bad effects wear off gradually as the system becomes inoculated against the poison, until, finally, little more inconvenience is felt from a sting than would be caused by the prick of a needle. In rare instances, however, there are to be found people who suffer so severely that a sting is positively dangerous to them: their system never seems to become immune to the poison. It is scarcely necessary to say that such persons should not keep bees. Again, there are individuals too nervous to go among their bees without being clad in armour, as it were, from head to feet. There are many such who have kept bees for a long time, and yet have never been able to get over their nervousness. Such people should not keep bees. Bees and Bee-Keeping W. C. Harbison, 2015-07-21 Excerpt from *Bees and Bee-Keeping: A Plain, Practical Work; Resulting From Tears of Experience and Close Observation in Extensive Apiaries, Both in Pennsylvania and California; With Directions How to Make Bee Keeping a Desirable and Lucrative Business, and for Shipping Bees to California* The author of this treatise, having been taught from youth to work with Bees, ever admiring their great sagacity, industry and perseverance, and desiring to turn their industry to account as a matter of profit, directed all his efforts to acquire a correct

knowledge of their habits, wants and requirements necessary to continued prosperity and profit. He observed, years ago, that when the seasons were favorable for producing abundance of honey, bees invariably flourished and increased rapidly, yielding large returns in the shape of surplus honey, bidding defiance to worms and all other enemies, being evidently prosperous and happy; but when scarcity prevailed, the very reverse of this condition of things was true; adversity took the place of prosperity - some would starve, others would fall a prey to their enemies. from the publisher. Not indexed. Not illustrated. 1860 edition. Excerpt: ... ment (eggs), so that few or many are produced, according to the necessities of the colony. That this is true to a certain extent, seems highly probable; for if a queen is taken from a feeble colony, her abdomen seldom appears greatly distended; and yet, if put in a strong one, she speedily becomes prolific. He continues: I conceive that she has the power of regulating or repressing the development of her eggs, so that gradually she can diminish the number maturing and finally cease laying, and remain inactive as long as circumstances require. The old queen appears to qualify herself for accompanying a first swarm, by repressing the development of eggs; and as this is done at the most genial season of the year, it does not seem to be the result of atmospheric influence. The only difference upon this point between Mr. Langstroth and myself is, that he ascribes entirely to the queen the ability to produce a greater or less amount of eggs, whilst I believe this matter is regulated entirely by the common worker bees, by the quantity or quality of food they give her; or in other words, she is an instrument which they use as they see fit, to supply them with eggs from which to replenish the hive with young workers. NO EGGS ARE DEPOSITED BY THE QUEEN IN QUEEN CELLS. This may seem paradoxical to some, yet I think facts will fully confirm this opinion. The inveterate hostility that exists between queens is well known by all observing bee-keepers. So fearful are they of a rival in the family, that I have known them frequently to rush to the queen cells, and if permitted by the bees, destroy the contents of every one, from the larva of a day or two old up to those in an advanced stage; and they are just as ready to do this, and will do it, if...
