**Bee Time** Mark L. Winston,2014-10-06 Being among bees is a full-body experience, Mark Winston writes. Bee Time presents his reflections on three decades spent studying these remarkable creatures, and on the lessons they can teach about how humans might better interact with one another and the natural world, from the boardroom to urban design to agricultural ecosystems.

**Organization of Insect Societies** Jürgen Gadau,Jennifer Fewell,2009-02-28 In this landmark volume, an international group of scientists has synthesized their collective expertise and insight into a newly unified vision of insect societies and what they can reveal about how sociality has arisen as an evolutionary strategy. Jürgen Gadau and Jennifer Fewell have assembled leading researchers from the fields of molecular biology, evolutionary genetics, neurophysiology, behavioral ecology, and evolutionary theory to reexamine the question of sociality in insects. Recent advances in social complexity theory and the sequencing of the honeybee genome ensure that this book will be valued by anyone working on sociality in insects. At the same time, the theoretical ideas presented will be of broad-ranging significance to those interested in social evolution and complex systems.

**Time** Sarit Kattan Gribetz,Lynn Kaye,2023-08-21 Time permeates language, society, and individual lives, but time eludes definition. From grand scales of geologic time to the exasperation of waiting in endless bureaucratic lines, from the unifying sense of ancestral presence at an ancient monument to the imminent question of climate resilience, this volume presents conceptions of time through a kaleidoscope of cultures and disciplines. Accessible to students and scholars alike, the book demonstrates that far from natural, stable, or singular, time is culturally dependent, historically contingent, socially constructed, and disciplinarily specific – and that multidisciplinary and cross-cultural conversations transform our understanding of time.

*The Living Clock* John D. Palmer,2002-03-14 From one-celled paramecium to giant blue whales, we all have internal clocks that regulate the rhythms we live by. In *The Living Clock*, John Palmer, one of the world's leading authorities on these rhythms, takes us on a tour of this broad and multifaceted subject, examining everything from glowing fruit flies to the best cures for jet lag. Palmer has a wonderful sense of humor and an eye for the startling fact. We learn that fiddler crabs--in a lab where there are no time nor tide cues--remain active when low tide would occur and motionless during high tide, the same pattern they follow in their natural habitat. (In fact, you can remove a crab's leg and the leg will keep a tidal rhythm as long as it's kept alive.) Moreover, humans are subject to more than one hundred biological rhythms. Mental acuity peaks in the afternoon, for instance, and our blood pressure peaks at seven in the morning (when most heart attacks occur). The time of day you take medication can affect how well it works. And Palmer shows that when our clocks are thrown off kilter, trouble follows, especially for rotating shift workers--the Bhopal spill, the Chernobyl reactor explosion, and the Three Mile Island accident all happened when new crews began early-hour shifts. No one has discovered exactly how our internal clocks work--Palmer says a Nobel Prize awaits that lucky scientist--but they are no less fascinating for their inexplicable nature. Frequently amusing and always eye-opening, *The Living Clock* is a treat for everyone curious about the nature of life as well as anyone planning a long jet flight.

**The Physiological Clock** Erwin Bünning,2013-06-29 This book is a translation of the second Gennan edition (1963). In a few places modifications have been made to take into account important works that have since appeared. The aim has not been an all-embracing survey of experimental facts on the subject, but rather to emphasize the physiological kinship of phenomena having a wide variety of names, and to show thereby the great extent to which the physiological clock influences quite different phenomena in the behaviour of unicellular organisms, of higher plants, of animals, and of human beings. Furthermore, an attempt has been made to make as thorough an analysis of the mechanism of the clock as is possible at the present time. The first draft of the translation was made by Dr. LARS LORCHER (now of the of Radiation and Organisms, Smithsonian Institution, Washington, D. C.). Division The whole script was then thoroughly revised and corrected by Prof. Dr. FRANK SALISBURY (Department of Botany, Colorado State University, Fort Collins, Colorado). Finally, I made amendments and additions to the presentation, as they seemed to me to be necessary, in order to keep abreast of recent developments. Mr. DEREK MCCULLOCH (at present Lecturer in English Language in the University of Tiibingen) then checked the manuscript. I should like to thank all those involved in the translation for their efforts.
