Submillimetre Astronomy Graeme D. Watt, Adrian S. Webster, 2013-03-14 G. M. Bernstein, M. L. Fischer, and P. L. Richards Department of Physics, University of California Berkeley, California 94720, U. S. A. J. B. Peterson Department of Physics, Princeton University Princeton, New Jersey 08540, U. S. A. T. Timusk Department of Physics, McMaster University Hamilton, Ontario L8S 4M1 , Canada ABSTRACT. Recent measurements of the diffuse background at millimeter wavelengths indicate no departure from a Planck spectrum near the peak of the blackbody curve. Anisotropy measurements indicate no structure, at the 2% level, in the recently detected submillimeter excess. We report here the results of an April 1987 balloon flight of an instrument designed to measure the spectrum of the cosmic background radiation from 1 mm to 3 mm. A description of the instrument can be found in Peterson, Richards, and Timusk (1985). Modifications were made to the apparatus and experimental procedure in order to identify and reduce systematic errors. Results from the latest flight indicate that two effects hamper the interpretation of the data. These systematic effects will be described in detail in a forthcoming publications; they are probably responsible for the non-Planckian spectrum measured by Woody and Richards (1981). Attempts to remove the systematic effects from our data yield the upper limits to the CBR brightness temperature in 4 bands from 1 mm to 3 mm. There is no evidence for an excess of radiation near the 2.8 K blackbody peak.

Behind the Clouds Judy Woodford, 2013-03 Behind the Clouds is an endearing story told through the voice of a little girl. The bright and playful illustrations engage the young child while the simple story tells the

feelings and actions of the family who cope with losing a loved one. The author's letter to parents suggests ways for young families to use this colorful book as an effective tool for dealing with this sad but inevitable topic.

The Chemically Controlled Cosmos T. W. Hartquist, D. A. Williams, 1995-12-07 Simple chemistry governs a host of the exotic objects that populate our cosmos. For example, molecules in the early Universe acted as natural temperature regulators, keeping the primordial gas cool and, in turn, allowing galaxies and stars to form. What are the tools of the trade for the cosmic chemist and what can they teach us about the Universe we live in? These are the questions answered in this engaging and informative guide--the first book for nonspecialists on molecular astrophysics. In clear, nontechnical terms, and without formal mathematics, Hartquist and Williams show how to study and understand the behavior of molecules in a host of astronomical situations. Readers will learn about the secretive formation of stars deep within interstellar clouds; the origin of our own solar system; the cataclysmic deaths of many massive stars that explode as supernovae; and the hearts of active galactic nuclei, the most powerful objects in the universe. This book provides an accessible introduction to a wealth of astrophysics, and an understanding of how cosmic chemistry allows the investigation of many of the most exciting questions concerning astronomy today.

High-Velocity Clouds Hugo van Woerden, Bart Wakker, Ulrich Schwarz, Klaas de Boer, 2004-09-29 On the occasion of the retirement of Ulrich Schwarz, a symposium was held in Groningen in May of 1996, celebrating his contributions to the study of the interstellar medium, including his work on the high-velocity clouds. The coming together of many specialists in the latter field prompted the idea of compiling a book containing their contributions, and summarizing the status of our understanding of the high-velocity cloud phenomenon. This seemed especially worthwhile at the time, since many exciting developments were taking place. After the discovery of some H I clouds with high velocities, about 40 years ago, the subject had been dominated by 21-cm observations of H I emission. Starting in the mid-1980s much progress was being made because of the availability of new instruments, such as large ground-based optical telescopes and UV observatories in space. The connections between the work on high-velocity clouds and other studies of the properties of the (hot) interstellar medium also became clearer.

Srimad-Bhagavatam, Tenth Canto His Divine Grace A. C. Bhaktivedanta Swami Prabhupada, Disciples of His Divine Grace A. C. Bhaktivedanta Swami Prabhupada, 1977-12-31 Srimad-Bhagavatam, an epic philosophical and literary classic, holds a prominent position in India's voluminous written wisdom. The timeless wisdom of India is expressed in the Vedas, ancient Sanskrit texts that touches upon all fields of human knowledge. Originally preserved through oral tradition, the Vedas were first put into writing by Srila Vyasadeva, the literary incarnation of God. After compiling the Vedas, Srila Vyasadeva was inspired by his spiritual master to present their profound essence in the form of Srimad-Bhagavatam. Known as the ripened fruit of the tree of Vedic literature, Srimad-Bhagavatam is the most complete and authoritative exposition of Vedic knowledge. After writing the Bhagavatam, Vyasa taught it to his son, Shukadeva Goswami, who later spoke the Bhagavatam to Maharaja Parikshit in an assembly of sages on the bank of the sacred Ganges River.

Although Maharaja Parikshit was a great rajarshi (saintly king) and the emperor of the world, when he received notice of his death seven days in advance, he renounced his entire kingdom and retired to the bank of the Ganges to seek spiritual enlightenment. The questions of King Parikshit and Shukadeva Goswami's illuminating answers, concerning everything from the nature of the self to the origin of the universe, are the basis of Srimad-Bhagavatam. This edition of Bhagavatam is the only complete English translation with an elaborate and scholarly commentary, and it is the first edition widely available to the English-reading public. This work is the product of the scholarly and devotional effort of His Divine Grace A. C. Bhaktivedanta Swami Prabhupada, the world's most distinguished teacher of Indian religious and philosophical thought. His Sanskrit scholarship and intimate familiarity with Vedic culture combine to reveal to the West a magnificent exposition of this important classic.

Behind the Clouds Wendy P. Patrick, 2014-02-05 This book holds the interest of readers and is one to which many people can relate, as it evokes feelings of sadness, happiness, concern and even anger. Shem and Saran live contentedly with their mother, Sara, on an island in the Caribbean, their father having disappeared from their home when Shem was six and Saran was two. The last thing anyone has heard about him is that he joined the United States Army. Six years on and having apparently adjusted to a life without a father, their world is shattered when their mother takes ill and subsequently dies. Shem's godmother offers to keep them, but this begins a life of unexpected difficulties for these two unfortunate children. The self-absorbed godmother becomes overwhelmed with the extent of her commitment and eventually resorts to sending them to a children's home. Tragedy follows them to the home and life becomes further complicated. Can one young boy nursing his own inner disappointment for years cope with the persistent curve balls? Eventually Shem is able to move to his own apartment, taking his sister with him but is that the wisest decision? And what could cause their father to reappear in their lives at this time and with shocking revelations? Shem has to decide how he will handle this new situation, which, if not handled correctly, could cause more pain. He must ensure that the tentacles of the past do not reach out and prevent him from finally having a peaceful life.

The Magellanic Clouds Raymond Haynes, Douglas Milne, 1991-02-28 Symposium 148 The Magellanic Clouds and their Dynamical Interaction with the Milky Way was the first IAU Symposium held in Australia since 1973. In all, 23 countries were represented by 149 participants. The Symposium was held from July 9 to 13, 1990 at Womens College, the University of Sydney. The last symposium on the Magellanic Clouds' was held in 1983 in Ttibingen, Germany. Since then new ground-and satellite-based instruments have become available. A range of results from these instruments were presented at IAU Symposium 148 and are published in these proceedings. IAU Symposium 148 was timed to coincide with the commissioning of the Australia Telescope, and indeed, a few of the first results from that instrument were presented at this Symposium Over the next decade the Australia Telescope is destined to make a major impact on Magellanic Cloud research. Papers are arranged in five main sections reflecting the Symposium timetable: • Large-Scale Structure and Kinematics • Star Formation and Clustering • Stellar Evolution • The Interstellar Medium • The LMC-SMC-Galaxy System These are preceeded by both the introduction to and the summary of the Symposium. Questions and answers from the oral sessions

are reproduced at the end of each section.

Antiques Fire Sale Barbara Allan,2020-04-28 That local theater diva of a certain age, Vivian Borne—a.k.a. Brandy's Mother—is sheriff of Serenity County now, but still hot on the trail of precious antiques. On a tour of the historic Wentworth Mansion, the two dedicated dealers are aglow at the treasure trove of priceless objects . . . never dreaming everything will turn to ashes, hours later. A charred corpse in the ruins is identified as the mansion's caretaker, a one-time flame of Vivian's. But Tony Cassato—Brandy's beau and Serenity's Chief of Police—throws cold water on Sheriff Vivian's suspicions of murder. Then Brandy spots a certain familiar item for sale on the Internet, and Mother suspects the fire is just a smoke screen. When their doggie detective, Sushi the shih tzu, sniffs out a second body in the woods, Mother and Brandy turn up the heat on a homicidal torcher. Because any killer who takes on the Borne girls is playing with fire. Don't miss Brandy Borne's tips on buying and selling antiques on the internet! Visit us at kensington.com

Sky Vistas Craig Crossen,Gerald Rhemann,2012-12-06 Praise for Craig Crossen and Gerald Rhemann's, *Sky Vistas Astronomy* This is a practical and stunningly beautiful guide whose core is a descriptive tour of the best celestial sights: open and globular clusters, nebulae, galaxies, and large areas of sky. The photos in black and white and color, are magnificent. The text goes beyond ordinary descriptions to tell the reader something about each object's nature. *Sky & Telescope* Packed with information that I have encountered nowhere else in amateur-astronomy literature. *Sky Vistas* also includes 48 full-page color astrophotos by Gerald Rhemann, most of which are magnificent.
