Nothing on the left Stien Bekaert,2018-10-16 Stien Bekaert's 'Nothing on the left' is a carefully composed formal play with fragmentary photographs? from found footage to self-made images. Most of these photos would normally be doomed to disappear between the folds of time, if Stien Bekaert did not take care of them, and granted them a new life.00Captivated by handicraft, Bekaert experiments with various printing techniques. She makes etchings, lithographs and monotypes, as well as riso, offset and transfer prints. Through manipulations? such as crops, transformations and blowups? Stien Bekaert deconstructs the images and creates distance. The compositions, the choice of materials and the meticulous assembling of loose sheets into a new narrative, no detail remains untouched. The main objective is to give the viewer a poetic viewing experience. At times lyrical and dreamy, at others uncanny or disquieting. Always ambiguous and permeated with an unfulfillable desire.

International Financial Management Geert Bekaert,Robert Hodrick,2017-11-30 Combining academic theory with practical case studies, this book helps students understand global financial markets and business management.

Development Economics Research Trends Gustavo T. Rocha,2008 Development economics is a branch of economics which largely deals with the economic aspects of the development process in developing countries with a focus on methods of promoting economic growth while also dealing with the economic, social, political and institutional mechanisms, both public and private, necessary to bring about rapid...and large-scale improvements in levels of living for the peoples living in developing countries. This new book presents the latest research in this growing field.

Emerging Market Capital Flows Richard M. Levich,1998-01-31 In a little over one decade, the spread of market-oriented policies has turned the once so-called lesser developed countries into emerging markets. Many forces have been responsible for the tremendous growth in emerging markets. Trends toward market-oriented policies that permit private ownership of economic activities, such as public utilities and telecommunications, are part of the explanation. Corporate restructuring, following the debt crisis of the early 1980's has permitted many emerging market companies to gain international competitiveness. And an essential condition, a basic sea-change in economic policy, has opened up many emerging markets to international investors. This growth in emerging markets has been accompanied by volatility in individual markets, and a sector-wide shock after the meltdown in the Mexican Bolsa and Mexican peso, resulting in heated debate over the nature of these markets. Emerging market capital flows continue to be the subject of intense discussion around the world among investors, academics, and policymakers. Emerging Market Capital Flows examines the issues of emerging market capital flows from several distinct perspectives, addressing a number of related questions about emerging markets.

Supply Chain Strategy and Financial Metrics Bram DeSmet,2018-05-03 Supply Chain Strategy and Financial Metrics is a step-by-step guide to balancing the triangle of service, cost and cash which is the essence of supply chain management. Supply chains have become increasingly strategy-driven, and this Supply Chain Triangle approach puts the supply chain at the heart of the strategy discussion instead of seeing it as a result. Supply Chain Strategy and Financial Metrics fully reflects the 'inventory' or 'working capital' angle and examines the optimisation of the supply chain and Return on Capital Employed. Including case studies of Barco, Casio and a selection of food retail companies, this book covers building a strategy-driven KPI dashboard, target setting and financial benchmarking. Regular examples and diagrams illustrate how different types of strategies lead to different trade-offs in the Supply Chain Triangle. This ground-breaking text links supply chain, strategy and finance through financial metrics, therefore creating value for the shareholder. Online supporting resources include worksheets covering basic financial concepts such as cash flow and working capital, with example data sets and guidelines/exercises to make it interactive.

Cracking the Emerging Markets Enigma G. Andrew Karolyi,2015 In Cracking the Emerging Markets Enigma, emerging markets expert Andrew Karolyi outlines a practical strategy for evaluating the opportunities and-more importantly-the risks of investing in emerging markets. Karolyi's proposed system evaluates multiple dimensions of the potential risks faced by prospective investors. These categories of risk reflect the uneven quality or fragility of the various institutions designed to assure integrity in capital markets-political stability, corporate opacity, limits placed on foreign investors, and more. By distilling these analyses into a numerical scoring system, Karolyi has devised a way to assess with ease emerging markets by different dimensions of risk and across all dimensions together.

Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art Daniele Peila,Giulia Viggiani,Tarcisio

Celestino,2019-04-17 Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground – the black circle in the logos – it will be possible to preserve and enhance the quality of the space at ground level – the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.

Geotechnical Aspects of Underground Construction in Soft Ground Mohammed Elshafie,Giulia Viggiani,Robert Mair,2021-05-10 Geotechnical Aspects of Underground Construction in Soft Ground comprises a collection of 112 papers, four general reports on the symposium themes, the Fujita Lecture, three Special Lectures and the Bright Spark Lecture presented at the Tenth International Symposium on Geotechnical Aspects of Underground Construction in Soft Ground, held in Cambridge, United Kingdom, 27-29 June 2022. The symposium is the latest in a series which began in New Delhi in 1994, and was followed by symposia in London (1996), Tokyo (1999), Toulouse (2002), Amsterdam (2005), Shanghai (2008), Rome (2011), Seoul (2014) and Sao Paulo (2017). This was organised by the Geotechnical Research Group at the University of Cambridge, under the auspices of the Technical Committee TC204 of the International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE). Geotechnical Aspects of Underground Construction in Soft Ground includes contributions from more than 25 countries on research, design and construction of underground works in soft ground. The contributions cover: Field case studies Sensing technologies and monitoring for underground construction in soft ground Physical and numerical modelling of tunnels and deep excavations in soft ground Seismic response of underground infrastructure in soft ground Design and application of ground improvement for underground construction Ground movements, interaction with existing structures and mitigation measures The general reports give an overview of the papers submitted to the symposium, covered in four technical sessions. The proceedings include the written version of the five invited lectures covering topics ranging from developments in geotechnical aspects of underground construction, tunnelling and groundwater interaction (short and long-term effects), the influence of earth pressure balance shield tunnelling on pre-convergence and segmental liner loading (field observations, modelling and implications on design). Similar to previous editions, Geotechnical Aspects of Underground Construction in Soft Ground represents a valuable source of reference on the current practice of analysis, design, and construction of tunnels and deep excavations in soft ground. The book is particularly aimed at academics and professionals interested in geotechnical and underground engineering.

International Financial Management Geert J Bekaert,Robert J. Hodrick,2013-08-27 For undergraduate and graduate students enrolled in an international finance course.
