Urban Water Systems & Floods II S. Hernández,S. Mambretti,D. Proverbs,J. Puertas,2018-08-21 Developing an improved understanding of emerging flood risk management and urban water management was the goal set for research presented at the 6th International Conference on Flood and Urban Water Management, held in A Coruña, Spain. The published papers look to solve various challenges in this field by drawing on the expertise of numerous disciplines and considering a range of responses. Flooding is a global phenomenon that claims numerous lives worldwide each year. When flooding occurs in urban areas, it can cause substantial damage to property as well as threaten human life. In addition, many more people must endure the homelessness, upset and disruption that are left in the wake of floods. The increased frequency of flooding in the last few years, coupled with climate change predictions and urban development, suggest that these impacts are set to worsen in the future. How we respond and importantly, adapt to these challenges is key to developing our long-term resilience at the property, community and city scale. Apart from the physical damage to buildings, contents and loss of life, which are the most obvious, impacts of floods upon households, other more indirect losses are often overlooked. These indirect and intangible impacts are generally associated with disruption to normal life as well as long-term health issues including community displacements and stress-related illnesses. Flooding represents a major barrier to the alleviation of poverty in many parts of the developing world, where vulnerable communities are often exposed to sudden and life-threatening events. As our cities continue to expand, their urban infrastructures need to be re-evaluated and adapted to new requirements related to the increase in population and the growing areas under urbanization. The papers contained in this book consider these problems and deals with two main urban water topics: water supply systems and urban drainage.

Handbook of Sustainable Development Through Green Engineering and Technology Vikram Bali,Rajni Mohana,Ahmed A. Elngar,Sunil Kumar Chawla,Gurpreet Singh,2022-09-27 Green engineering involves the designing, innovation, and commercialization of products and processes which promote sustainability without eliminating both efficiency and economic viability. This handbook focuses on sustainable development through green engineering and technology. It is intended to address the applications and issues involved in their practical implementation. A new range of renewable-energy technologies, modified to provide green engineering, will be described in this handbook. It will explore all green technologies required to provide green engineering for the future. These include, but are not limited to, green smart buildings, fuel-efficient transportation, paperless offices, and many more energy-efficient measures. Handbook of Sustainable Development through Green Engineering and Technology acts as a comprehensive reference book to use when identifying development for programs and sustainable initiatives within the current legislative framework. It aims to be of great interest to researchers, faculty members, and students across the globe.

Greening Cities Puay Yok Tan,Chi Yung Jim,2017-03-29 This book offers an overview of recent scientific and professional literature on urban greening and urban ecology, focusing on diverse disciplines such as landscape architecture, geography, urban ecology, urban climatology, biodiversity conservation, urban governance, architecture and urban hydrology. It includes contributions in which academics, public policy experts and practitioners share their considerable knowledge on the multi-faceted aspects of greening cities. The greening of cities has witnessed a global resurgence over the past two decades and has made a significant contribution to urban liveability and sustainability, as well as increasing resilience. As urban greening efforts continue to expand, it is useful to promote recent advances in our understanding of various aspects of planning, design and management of urban greenery, but at the same time, it is also important to realize that there are important gaps in our knowledge and that further research is needed. The book is organized in three main parts: concepts, functions and forms of urban greening. The first part examines the historical roots of greening cities and how the burgeoning field of urban ecology can contribute useful principles and strategies to guide the planning, design and management of urban greening. The second part shifts the focus to the diverse range of services – the functions – provided by urban greening, such as those related to urban climate, urban biodiversity, human health, and community building. The final part explores conventional, often neglected, but important forms of urban greenery such as urban woodlands and urban farms, as well as relatively recent forms of urban greenery like those integrated with buildings and waterways. It offers a ready reference resource for researchers, practitioners and policy-makers to grasp the critical issues and trigger further studies and applications in the quest for high-performance green cities.

Games, Actions, and Social Software Jan van Eijck,Rineke Verbrugge,2012-04-23 Edited in collaboration with FoLLI, the Association of Logic, Language and Information, this book collects a set of chapters of the multi-disciplinary project Games, actions and Social software which was carried out at the Netherlands Institute for Advanced Study in the Humanities and Social Sciences (NIAS) in Wassenaar, from September 2006 through January 2007. The chapters focus on social software and the social sciences, knowledge, belief and action, perception, communication, and cooperation.

Unicist R&D of Adaptive Systems in Business Peter Belohlavek,2012-03-19 This book is focused on the R&D of the adaptive systems of businesses in order to develop and design solutions for them. It provides the technology to research and develop solutions for growth, innovation and improvement of business processes. It integrates applied research and architectural design. It starts with a research process where the solutions need to be confirmed and ends with a design process developing the architecture of a business, business process or business unit. The research process is homologous to the clinical trials that are developed in medicine. What needs to be confirmed is the efficacy the solution provides, the security and safety of the process and the side effects the solution produces. The solution needs to be considered as a unified field with the system in order to confirm the validity of the remedy . The first step of an R&D process is being able to apprehend the unified field of a business. After this has been achieved, a diagnosing process can begin. This work shows that the solution has to be designed and built considering its utility, aesthetics and solidity. That is why an extreme design process is used (Unicist XD) that includes several pilot tests to ensure the functionality of the solution.

Blue and Green Cities Robert C. Brears,2023-11-04 A completely revised and updated new edition of this successful book focused on urban policy innovations that promote the application of blue-green infrastructure in managing water resources sustainably. Since the first edition published, nature-based solutions in general and blue-green infrastructure, in particular, have become a more recognised solution to various societal challenges, including mitigating climatic extremes in cities while restoring the natural environment and enhancing biodiversity. This new edition provides updated research on urban policy innovations that promote the application of BGI in managing water resources sustainably. In particular, the book contains case studies that illustrate how cities of differing climates, lifestyles and income levels have implemented policy innovations that promote the application of BGI in managing water, wastewater and stormwater sustainably to enhance resilience to climate change and reduce environmental degradation. The seven case studies are leading cities that have implemented various fiscal and non-fiscal policy tools to

encourage the implementation of BGI on both public and private property to reduce stormwater runoff volumes, enhance the health of waterways, enhance resilience to climate change and meet regulatory requirements.

The Palgrave Encyclopedia of Urban and Regional Futures Robert C. Brears,2023-01-13 While urban settlements are the drivers of the global economy and centres of learning, culture, and innovation and nations rely on competitive dynamic regions for their economic, social, and environmental objectives, urban centres and regions face a myriad of challenges that impact the ways in which people live and work, create wealth, and interact and connect with places. Rapid urbanisation is resulting in urban sprawl, rising emissions, urban poverty and high unemployment rates, housing affordability issues, lack of urban investment, low urban financial and governance capacities, rising inequality and urban crimes, environmental degradation, increasing vulnerability to natural disasters and so forth. At the regional level, low employment, low wage growth, scarce financial resources, climate change, waste and pollution, and rising urban peri-urban competition etc. are impacting the ability of regions to meet socio-economic development goals while protecting biodiversity. The response to these challenges has typically been the application of inadequate or piecemeal solutions, often as a result of fragmented decision-making and competing priorities, with numerous economic, environmental, and social consequences. In response, there is a growing movement towards viewing cities and regions as complex and sociotechnical in nature with people and communities interacting with one another and with objects, such as roads, buildings, transport links etc., within a range of urban and regional settings or contexts. This comprehensive MRW will provide readers with expert interdisciplinary knowledge on how urban centres and regions in locations of varying climates, lifestyles, income levels, and stages development are creating synergies and reducing trade-offs in the development of resilient, resource-efficient, environmentally friendly, liveable, socially equitable, integrated, and technology-enabled centres and regions.

Transactions on Computational Systems Biology IV Luca Cardelli,Stephen Emmott,2006-04-06 This, the 4th Transactions on Computational Systems Biology volume, contains carefully selected and enhanced contributions presented at the first Converging Science conference held at the University of Trento, Italy, in December 2004. Dedicated especially to models and metaphors from biology to bioinformatics tools, the 11 papers selected for the special issue cover a wide range of bioinformatics research, such as foundations of global computing, interdisciplinarity in innovation initiatives, biodiversity, and more.

Teamwork in Multi-Agent Systems Barbara Dunin-Keplicz,Rineke Verbrugge,2011-06-24 What makes teamwork tick? Cooperation matters, in daily life and in complex applications. After all, many tasks need more than a single agent to be effectively performed. Therefore, teamwork rules! Teams are social groups of agents dedicated to the fulfilment of particular persistent tasks. In modern multiagent environments, heterogeneous teams often consist of autonomous software agents, various types of robots and human beings. Teamwork in Multi-agent Systems: A Formal Approach explains teamwork rules in terms of agents' attitudes and their complex interplay. It provides the first comprehensive logical theory, TeamLog, underpinning teamwork in dynamic environments. The authors justify design choices by showing TeamLog in action. The book guides the reader through a fascinating discussion of issues essential for teamwork to be successful: What is teamwork, and how can a logical view of it help in designing teams of agents? What is the role of agents' awareness in an uncertain, dynamic environment? How does collective intention constitute a team? How are plan-based collective commitments related to team action? How can one tune collective commitment to the team's organizational structure and its communication abilities? What are the methodological underpinnings for teamwork in a dynamic environment? How does a team and its attitudes adjust to changing circumstances? How do collective intentions and collective commitments arise through dialogue? What is the computational complexity of TeamLog? How can one make TeamLog efficient in applications? This book is an invaluable resource for researchers and graduate students in computer science and artificial intelligence as well as for developers of multi-agent systems. Students and researchers in organizational science, in particular those investigating teamwork, will also find this book insightful. Since the authors made an effort to introduce TeamLog as a conceptual model of teamwork, understanding most of the book requires solely a basic logical background.

Below-ground Interactions in Tropical Agroecosystems Meine van Noordwijk,Georg Cadisch,C. K. Ong,2004 Below-grownd interactions are often seen as the 'dark side' of agroecosystems, especially when more than one crop is grown on the same piece of land at he same time. this book aims to review the amount of light he past decade of research has shed on this topic. It also aims to review ohw far we have come in unravelling the positive and negative aspects of these interactions and how, in dialogue with farmers, we can use the generic principles that are now emerging to look for sita-specifics solutions.

Molecular Diagnostics George P. Patrinos,Wilhelm Ansorge,Phillip B. Danielson,2016-10-27 Molecular Diagnostics, Third Edition, focuses on the technologies and applications that professionals need to work in, develop, and manage a clinical diagnostic laboratory. Each chapter contains an expert introduction to each subject that is next to technical details and many applications for molecular genetic testing that can be found in comprehensive reference lists at the end of each chapter. New chapters have been added, including the various new technologies involved in next-generation sequencing (mutation detection, gene expression, etc.), mass spectrometry, and protein-specific methodologies. All revised chapters have been completely updated, to include not only technology innovations, but also novel diagnostic applications. As with previous editions, each of the chapters in this section includes a brief description of the technique followed by examples from the area of expertise from the selected contributor. The second part of the book attempts to integrate previously analyzed technologies into the different aspects of molecular diagnostics, such as identification of genetically modified organisms, stem cells, pharmacogenomics, modern forensic science, molecular microbiology, and genetic diagnosis. Part three focuses on various everyday issues in a diagnostic laboratory, from genetic counseling and related ethical and psychological issues, to safety and quality management. Presents a comprehensive account of all new technologies and applications used in clinical diagnostic laboratories Explores a wide range of molecular-based tests that are available to assess DNA variation and changes in gene expression Offers clear translational presentations by the top molecular pathologists, clinical chemists, and molecular geneticists in the field

Urban Flooding in Brazil Francisco Mendonça,Ariadne Farias,Elaiz Buffon,2023-04-24 This contributed volume analyzes flooding scenarios in Brazilian cities using a geographic and spatiotemporal approach to explore impacts and ways to mitigate future disasters. The problem of urban flooding is growing in Brazilian cities due to the increasing number of natural disasters in the context of global climate change; this is a topic that poses challenges to urban planners and academics. Through three sections, this volume offers theoretical-conceptual, methodological and technical case studies, as well as cases that explore urban socio-environmental problems associated with flooding. Throughout the book, the concepts of risk, vulnerability and adaptation are used to explore future flood scenarios in Brazil. The integrated vision offered in this volume covers the floods themselves, evaluation of flood impacts, and the management process before, during, and after the flood event. The case studies presented here elucidate the concept of comprehensive urban flood management, offering a technical and diagnostic basis for the problem in different cities in Brazil. The present and future challenges presented by these chapters offer widely-transferable lessons that can be applied to making cities around the world more sustainable and disaster-resilient.

Management Education for Global Sustainability Charles Wankel,James A.F. Stoner,2009-10-01 For more than a century management education has fostered the development of leaders of many of the world's industrial successes with their immense creation of output that we now see as unsustainable. If we wish to avoid a time of tumultuous environmental crises in the global ecosystem management education must move more to being part of the solution, rather than of the problem. The task of transforming management education to contribute to the challenge of moving to global sustainability is upon us. *Management Education for Global Sustainability* provides a diverse and extensive set of perspectives on how management education can be transformed to be a significant part of the solution to the sustainability problem that business and other sectors of our world must grapple with. The spectrum of current integration of managing for sustainability into business school curricula is provided. A review of the current status sustainability oriented business degree options is completed. Approaches from around the world including China are offered. Management Education approaches through systems thinking, art, and stakeholder's theory are parsed. Specific examples of notable programs are covered, sustainable entrepreneurship for instance. A series of reports on program and institutional level initiatives that have been very successful are described. A new MBA program with a major in sustainability, integrating ocean science courses, is considered. Programs with action learning projects and industry concentrations as core elements will be analyzed. The sense of deeper purpose vibrancy and developing authentic relationships in management education for global sustainability is robust throughout this volume.
