Update on Translational Neuroimmunology - Research of ISNI 2018 Sandra Amor,Fabienne Brilot,David Brown,Judith M. Greer,Marc J. Ruitenberg,2020-12-29 The 14th International Congress of Neuroimmunology, ISNI 2018, was held in August 2018 in Brisbane, Australia, and is a biennial event organized by the International Society of Neuroimmunology (ISNI). The theme of ISNI 2018 was “Travelling the Neuroimmunological Translational Highway”, and the Congress highlighted many research discoveries that bridge the gap between basic and clinical sciences, and which impact our understanding of pathogenic immune-mediated mechanisms in diseases affecting the nervous system. In this Research Topic, we aim to give a comprehensive overview of topics highlighted at the Congress, showcasing the current state of the field of neuroimmunology and where it is going in the near future.

Written by a leading worker in the area, it includes many practical applications and case studies in the key process of ultrafiltration (UF), which is used in almost every bioprocess. Focuses on ultrafiltration for biopharmaceuticals—other books look at general ultrafiltration or general biopharmaceuticals A mix of theory and practical applications—other books tend to be more theory-oriented Addresses the main issues encountered in development and scale-up through recommendations and case studies

Summary: Real Leaders Don't Do PowerPoint BusinessNews Publishing,2014-11-12 The must-read summary of Christopher Witt's book: Real Leaders Don't Do PowerPoint: How to Sell Yourself and Your Ideas. This complete summary of the ideas from Christopher Witt's book Real Leaders Don't Do PowerPoint shows that when leaders speak, they're not generally trying to dazzle their audience with their mastery of presentation technology. In reality, leaders speak to make a difference, to promote their vision and to change the way people think. In his book, the author argues that in order to learn how to speak like a leader yourself, you must learn how to shape your message in such a way that it will encourage your audience to think differently now, and therefore act differently in the future. This summary provides readers with the four essential elements of speaking like a leader and delivering high quality speeches and presentations that will make an impact. Added-value of this summary: • Save time • Understand key concepts • Expand your presentation skills To learn more, read Real Leaders Don't Do PowerPoint and find out how you can learn to speak like a leader and influence people every time you deliver a presentation.

Apheresis in Neurological Disorders Johannes Dorst,2020-12-03 Apheresis refers to an extracorporeal therapy which aims at removing pathological constituents from the patients' blood. Due to the development of new techniques as well as the discovery of novel autoimmune antibodies, it is increasingly recognized as an important therapeutic option for a variety of autoimmune-mediated neurological disorders, including multiple sclerosis, myasthenia gravis, autoimmune encephalitis, Guillain-Barré syndrome, and many others. Therapeutic plasma exchange (TPE) constitutes the standard method of apheresis for most indications, while immunoadsorption (IA) offers a more specific, low-risk alternative. Both methods aim at removing auto-antibodies from the blood. Evidence for most neurological diseases is still low. Interestingly, more recent developments suggest that apheresis is not limited to the removal of autoantibodies but may also be useful in neurodegenerative and possibly even in acute vascular disorders.

Developing Biomarker-Based Tools for Cancer Screening, Diagnosis, and Treatment Institute of Medicine,National Cancer Policy Forum,2006-11-18 Research has long sought to identify biomarkers that could detect cancer at an early stage, or predict the optimal cancer therapy for specific patients. Fueling interest in this research are recent technological advances in genomics, proteomics, and metabolomics that can enable researchers to capture the molecular fingerprints of specific cancers and fine-tune their classification according to the molecular defects they harbor. The discovery and development of new markers of cancer could potentially improve cancer screening, diagnosis, and treatment. Given the potential impact cancer biomarkers could have on the cost effectiveness of cancer detection and treatment, they could profoundly alter the economic burden of cancer as well. Despite the promise of cancer biomarkers, few biomarker-based cancer tests have entered the market, and the translation of research findings on cancer biomarkers into clinically useful tests seems to be lagging. This is perhaps not surprising given the technical, financial, regulatory, and social challenges linked to the discovery, development, validation, and incorporation of biomarker tests into clinical practice. To explore those challenges and ways to overcome them, the National Cancer Policy Forum held the conference Developing Biomarker-Based Tools for Cancer Screening, Diagnosis and Treatment: The State of the Science, Evaluation, Implementation, and Economics in Washington, D.C., from March 20 to 22, 2006. At this conference, experts gave presentations in one of six sessions. In addition, seven small group discussions explored the policy implications surrounding biomarker development and adoption into clinical practice. Developing Biomarker-based Tools for Developing Cancer Screening, Diagnosis, and Treatment: The State of the Science, Evaluation, Implementation, and Economics-Workshop Summary presents the conference proceedings and will be used by an Institute of Medicine (IOM) committee to develop consensus-based recommendations for moving the field of cancer biomarkers forward.

Curing MS Howard L. Weiner, M.D.,2007-12-18 What causes multiple sclerosis? When will there be a cure? Dr. Howard Weiner has spent nearly three decades trying to find answers to the mysteries of multiple sclerosis, an utterly confounding and debilitating disease that afflicts almost half a million Americans. Curing MS is his moving, personal account of the long-term scientific quest to pinpoint the origins of the disease and to find a breakthrough treatment for its victims. Dr. Weiner has been at the cutting edge of MS research and drug development, and he describes in clear and illuminating detail the science behind the symptoms and how new

drugs may hold the key to taming the monster. From the Twenty-one Points of MS--a concise breakdown of the knowns and unknowns of the disease--to stories from the frontlines of laboratories and hospitals, Curing MS offers a message of hope about new treatments and makes a powerful argument that a cure can--and will--be found.

Healthcare Biotechnology Dimitris Dogramatzis, 2016-04-19 Foreseeing and planning for all of the possibilities and pitfalls involved in bringing a biotechnology innovation from inception to widespread therapeutic use takes strong managerial skills and a solid grounding in biopharmaceutical research and development procedures. Unfortunately there has been a dearth of resources for this aspect of the field.

Cancer Biomarkers Institute of Medicine, Committee on Developing Biomarker-Based Tools for Cancer Screening, Diagnosis, and Treatment, 2007-03-27 Many cancer patients are diagnosed at a stage in which the cancer is too far advanced to be cured, and most cancer treatments are effective in only a minority of patients undergoing therapy. Thus, there is tremendous opportunity to improve the outcome for people with cancer by enhancing detection and treatment approaches. Biomarkers will be instrumental in making that transition. Advances in biotechnology and genomics have given scientists new hope that biomarkers can be used to improve cancer screening and detection, to improve the drug development process, and to enhance the effectiveness and safety of cancer care by allowing physicians to tailor treatment for individual patients—an approach known as personalized medicine. However, progress overall has been slow, despite considerable effort and investment, and there are still many challenges and obstacles to overcome before this paradigm shift in oncology can become a reality.

Quality by Design for Biopharmaceuticals Anurag S. Rathore, Rohin Mhatre, 2011-09-20 The concepts, applications, and practical issues of Quality by Design Quality by Design (QbD) is a new framework currently being implemented by the FDA, as well as EU and Japanese regulatory agencies, to ensure better understanding of the process so as to yield a consistent and high-quality pharmaceutical product. QbD breaks from past approaches in assuming that drug quality cannot be tested into products; rather, it must be built into every step of the product creation process. Quality by Design: Perspectives and Case Studies presents the first systematic approach to QbD in the biotech industry. A comprehensive resource, it combines an in-depth explanation of basic concepts with real-life case studies that illustrate the practical aspects of QbD implementation. In this single source, leading authorities from the biotechnology industry and the FDA discuss such topics as: The understanding and development of the product's critical quality attributes (CQA) Development of the design space for a manufacturing process How to employ QbD to design a formulation process Raw material analysis and control strategy for QbD Process Analytical Technology (PAT) and how it relates to QbD Relevant PAT tools and applications for the pharmaceutical industry The uses of risk assessment and management in QbD Filing QbD information in regulatory documents The application of multivariate data analysis (MVDA) to QbD Filled with vivid case studies that illustrate QbD at work in companies today, Quality by Design is a core reference for scientists in the biopharmaceutical industry, regulatory agencies, and students.

European Handbook of Neurological Management Nils Erik Gilhus, Michael R. Barnes, Michael Brainin, 2011-07-12 Evidence-based, peer reviewed, best practice management guidelines for neurologists Diagnosis is only part of the puzzle. Effective treatment is what your patients really want. The European Federation of Neurological Societies has been publishing management guidelines in the European Journal of Neurology for many years. Developed by a consensus approach, using graded evidence, and then fully peer

reviewed, these guidelines provide gold-standard, best-practice guidance to the treatment of neurological disorders. They help bridge the gap between what is done and what should be done for patients with neurological disorders. The basic guidelines have been expanded with 'Recommendations' based on strong evidence and 'Good Practice Points' where only weaker evidence is available. The Guidelines in this volume cover: Investigation Major neurological diseases Neuromuscular diseases Infections Neurological problems Sleep disorders Rehabilitation The European Handbook of Neurological Management provides a thoroughly rounded and grounded approach to best-practice neurological management using evidence-based principles.

Real Leaders Don't Do PowerPoint Christopher Witt,Dale Fetherling,2009-02-03 Think about the most powerful speech you've ever heard a leader give. What made that speech--and that speaker--memorable was likely a mix of authenticity, stage presence, masterful delivery, and--above all--an inspirational message. Nobody ever walked out of a great speech saying, "I loved the way she used PowerPoint." Yet, all too often, speakers rely on tools like it to carry them through a presentation. Real leaders speak to make a difference, to promote a vision, to change the way people think and feel and act. Their ability to lead goes hand in hand with their ability to get their message across, no matter what size audience they're addressing. Drawing on his years of experience in coaching executives, Christopher Witt shows not just how to make a speech but why and when you should make one. His practical advice on how to take your game to the next level includes: • You are the message. Who you are--your character, experience, values--shapes the message your listeners hear. • Content is king. Delivery is important, but it is only the helpful--or unhelpful--servant of your message. So build each speech around one, and only one, "Big Idea." • A confused mind always says no. When you want your listeners to say yes, you've got to make them understand what you want them to do and why they should care. • Dare to do the unexpected. Leaders know the rules, and they know when, why, and how to break them. In chapters that can be read in five minutes or less and in a book that can be gone through in one sitting, Witt shows you how to become more confident, more commanding, more compelling speakers. But this isn't just a book about speaking. It's about leadership and about how people--CEOs and PTA presidents, small business owners and sales reps, middle managers and techno geeks--can present themselves and their ideas with greater impact.

Regulation of Tissue Responses: The TWEAK/Fn14 Pathway and other TNF/ TNFR Superfamily Members that Activate Noncanonical NFkB Signaling Linda C. Burkly,Timothy S. Zheng,John Silke,2016-01-21 The immune system mediates tissue responses under both physiological and pathological conditions, impacting the inflammatory, fibrogenic and regenerative components. In addition to various leukocyte subsets, it is now recognized that epithelial, endothelial and other non-hematopoietic tissue cell types actively contribute to the interplay shaping tissue responses. Further understanding the molecular pathways and mechanisms mediating these tissue responses is of great interest. In the past decade, TNF-like weak inducer of apoptosis (TWEAK) and its receptor, FGF-inducible molecule-14 (Fn14), members of the TNF/TNFR superfamily, have emerged as a prominent molecular axis regulating tissue responses. Generally leukocyte-derived, TWEAK signals through Fn14 which is highly induced in injured and diseased tissues on the surface of parenchymal, stromal and progenitor cells, thereby orchestrating a host of tissue-shaping responses, including inflammation, angiogenesis, cell proliferation or death, and the regulation of progenitor cells. Compelling preclinical results indicate that whereas transient TWEAK/Fn14 activation promotes productive tissue responses after acute injury, excessive or persistent TWEAK/Fn14 activation drives pathological tissue responses, leading to progressive damage and degeneration in target organs of injury, autoimmune and inflammatory diseases and cancer. Given that the highly inducible pattern of Fn14

expression is well conserved between mouse and man, the role of TWEAK/Fn14 in human disease is an area of intense investigation. Recent findings have also begun to shed light on how the TWEAK/Fn14 pathway fits into the immune network, interplaying with other well-established pathways, including TNF α , IL-17, IL-13 and TGF β , in regulating tissue responses. The noncanonical nuclear factor κ B (NF κ B) pathway plays a role in immunity and disease pathologies and appears to be activated by only a subset of TNF/ TNFR superfamily members. Of the various signaling pathways downstream of TWEAK/Fn14, particular attention has been placed on the noncanonical NF κ B pathway given that TWEAK induces acute activation of canonical NF κ B but prolonged activation of noncanonical pathway. Thus dovetailing of the TWEAK/Fn14 axis with noncanonical NF κ B pathway activation may be a key mechanism underlying tissue responses. Also of great interest is a deeper understanding of where, when and how tissue responses are regulated by other TNF/ TNFR superfamily members that can signal through noncanonical NF κ B. This Research Topic issue will cover: 1. TWEAK/Fn14 pathway biology, role in tissue responses, injury, and disease pathogenesis 2. Role of noncanonical NF κ B signaling cascade in tissue responses 3. Translational studies of relevance of TWEAK/Fn14 and noncanonical NF κ B in human disease 4. Other TNF superfamily members' signaling through noncanonical NF κ B in the regulation of tissue responses 5. Reviews and Perspectives on the above

Making in America Suzanne Berger, 2013-08-23 How America can rebuild its industrial landscape to sustain an innovative economy. America is the world leader in innovation, but many of the innovative ideas that are hatched in American start-ups, labs, and companies end up going abroad to reach commercial scale. Apple, the superstar of innovation, locates its production in China (yet still reaps most of its profits in the United States). When innovation does not find the capital, skills, and expertise it needs to come to market in the United States, what does it mean for economic growth and job creation? Inspired by the MIT Made in America project of the 1980s, Making in America brings experts from across MIT to focus on a critical problem for the country. MIT scientists, engineers, social scientists, and management experts visited more than 250 firms in the United States, Germany, and China. In companies across America—from big defense contractors to small machine shops and new technology start-ups—these experts tried to learn how we can rebuild the industrial landscape to sustain an innovative economy. At each stop, they asked this basic question: “When you have a new idea, how do you get it into the market?” They found gaping holes and missing pieces in the industrial ecosystem. Even in an Internet-connected world, proximity to innovation and users matters for industry. Making in America describes ways to strengthen this connection, including public-private collaborations, new government-initiated manufacturing innovation institutes, and industry/community college projects. If we can learn from these ongoing experiments in linking innovation to production, American manufacturing could have a renaissance.
