Novel Enzyme and Whole-Cell Biocatalysts Anwar Sunna,Richard Daniellou,2020-11-04 The concept of a circular economy relies on waste reduction, valorization, and recycling. Global trends for “green” synthesis of chemicals have positioned the field of enzyme technology and biocatalysis (multi-enzymes and whole-cells) as an alternative for the synthesis of more social- and environmentally-responsible bio-based chemicals. Recent advances in synthetic biology, computational tools, and metabolic engineering have supported the discovery of new enzymes and the rational design of whole-cell biocatalysts. In this book, we highlight these current advances in the field of biocatalysis, with special emphasis on novel enzymes and whole-cell biocatalysts for applications in several industrial biotechnological applications.

Horizontal Gene Transfer Mediated Multidrug Resistance: A Global Crisis, 2nd Edition Dongchang Sun, Katy Jeannot, Yonghong Xiao,Charles W. Knapp,2020-07-16 Throughout history, human life has been seriously threatened by bacterial infectious diseases. After the discovery of antibiotics, humanity thought it had won the fight against infectious bacteria. However, considering the rapid evolution of bacterial multidrug resistance and exhausted pipeline of antibiotics for fighting bacterial infectious diseases, we are approaching the ‘post-antibiotic’ era. Unlike eukaryote, bacteria are proficient in exchanging their genetic materials with others by means of horizontal gene transfer (HGT). As a vehicle for antibiotic resistance gene (ARG), plasmid is self-replicable and transferable in a wide range of host bacteria. Moreover, ways of HGT-mediated ARGs spreading are highly diverse among different species, implicating complex evolution routes for the development of multidrug resistance in bacteria. In recent years, multidrug resistance plasmids have been widely found in bacteria not only from clinical patients, but also from animals, birds and plants, as well as from natural environmental settings including soil and water – heralding that the ‘post-antibiotic’ era is much closer than we previously thought. The global crisis of multidrug resistance calls for a closer collaboration among people of different professions in different regions, countries and continents, which will help us recognize the current situation and eventually find effective and long-lasting solutions for fighting against infectious bacteria.

Open Access Neil Jacobs,2006-07-31 This book brings together many of the worlds leading open access experts to provide an analysis of the key strategic, technical and economic aspects on the topic of open access. Open access to research papers is perhaps a defining debate for publishers, librarians, university managers and many researchers within the international academic community. Starting with a description of the current situation

and its shortcomings, this book then defines the varieties of open access and addresses some of the many misunderstandings to which the term sometimes gives rise. There are chapters on the technologies involved, researchers, perspectives, and the business models of key players. These issues are then illustrated in a series of case studies from around the world, including the USA, UK, Netherlands, Australia and India. Open access is a far-reaching shift in scholarly communication, and the book concludes by going beyond today's debate and looking at the kind of research world that would be possible with open access to research outputs. Chapters by leading experts in the field, including Professor Jean-Claude Guéhen, Clifford Lynch, Stevan Harnad, Peter Suber, Charles Bailey, Jr., Alma Swan, Fred Friend, John Shipp and Leo Waaijers Discussion of open access from a wide range of perspectives Country case studies, summarising open access in the USA, UK Netherlands, Australia and India

Circulating Tumor Cells Catherine Alix-Panabieres,2020-04-03 The analysis of circulating tumor cells (CTCs) as a real-time liquid biopsy approach can be used to obtain new insights into metastasis biology, and as companion diagnostics to improve the stratification of therapies and to obtain insights into the therapy-induced selection of cancer cells. In this book, we will cover all the different facets of CTCs to assemble a huge corpus of knowledge on cancer dissemination: technologies for their enrichment, detection, and characterization; their analysis at the single-cell level; their journey as CTC microemboli; their clinical relevance; their biology with the epithelial-to-mesenchymal transition (EMT); their stem-cell properties; their potential to initiate metastasis at distant sites; their ex vivo expansion; and their escape from the immune system.

Integrated Pest and Disease Management in Greenhouse Crops Maria Lodovica Gullino,Ramon Albajes,Philippe C. Nicot,2020-03-17 This book represents a new, completely updated, version of a book edited by two of the current editors, published with Springer in 1999. It covers pest and disease management of greenhouse crops, providing readers the basic strategies and tactics of integrated control together with its implementation in practice, with case studies with selected crops. The diversity of editors and authors provides readers a complete picture of the world situation of IPM in greenhouse crops.

Genetically Modified Crops and Food Security Jasmeet Kour,Vishal Sharma,Imtiyaz Khanday,2022-11-18 This book reviews a wide-range of genetically modified (GM) crops to understand how they are produced, the impacts on the agricultural industry, and their potential for improving food security. The production of GM crops has now become an invaluable asset in the agricultural toolbox. With a significant portion of the world suffering from hunger and poverty, this book examines how food security can be achieved through GM crops. A wide variety of crops are examined, from the earliest developments of GM tomatoes and potatoes to recent interest in the development of low-cost, high yielding biofuels, such as microalgae. Chapters also discuss the role of GM crops in pest management and the consequential reduction in the use of insecticides. Overall, this book provides an important synthesis of GM crops from their commercial value to the agricultural industry, as well as their potential for improving food security. This book will be of great interest to students and scholars of agricultural engineering, crop science, food biotechnology, food security, and those interested

in food and agriculture and sustainable development more broadly.
