The Music of Wild Birds Judy Pelikan, 2004-01-01 One hundred years ago, F. Schuyler Mathews, an erudite naturalist and birder, theorized that birds sing first for love of music, and second for love of the lady. To expand on his theory, he actually scored the songs of birds in the wild. His charming text and bird-by-bird annotations were compiled into a guide called *Field Book of Wild Birds and Their Music*. This extraordinary work has now been lavishly illustrated and adapted for a new audience. Each bird is meticulously rendered by artist Judy Pelikan in full-color illustrations that feature not only the birds, but also their nests, eggs, and feathers. And every song is represented by its written musical score, which Mathews expertly explains in a way that both musicians and non-musicians can enjoy. As Mathews points out, the music of wild birds is everywhere--in poems, children's nursery songs, as well as in the works of the great composers: the Black-billed Cuckoo's call appears near the close of Beethoven's *Pastoral Symphony*; the Nashville Warbler's song is found in the opening bars of Rossini's *Carovale*, and the Meadowlark's song is remarkably like the first two bars of Alfredo's song in *La Traviata*. He reveals how a bird's character is reflected in its song: the Baltimore Oriole is a sharp-billed, sharp-witted character, and his remarks are as incisive and crisp as the toots of a steam whistle. And he reminds us of the words of our great poets--Wordsworth, Emerson, Sir Walter Scott--and their descriptions of the very same birds and their music. This classic, useful, and completely original guide will put a song into the heart of novice and experienced birder alike.

Peterson Field Guide To Bird Sounds Of Eastern North America Nathan Pieplow, 2017-03-07 The first comprehensive guide to the sounds of eastern North American birds, featuring an innovative visual index that allows readers to quickly look up unfamiliar sounds in the field. Bird songs and calls are just as important as visual field marks in identifying birds. But until now, the only way to learn them was by memorization. With this groundbreaking book, it's possible to visually distinguish bird sounds and identify birds using a field guide format. At the core of this guide is the spectrogram, a visual graph of sound. With a brief introduction to five key aspects—speed, repetition, pauses, pitch pattern, and tone quality—readers can learn to visualize sounds, without any musical training or auditory memorization. Picturing sounds makes it possible to search this book visually for a bird song heard in the field. The Sound Index groups similar songs together, narrowing the identification choices quickly to a brief list of birds that sound alike. Readers can then turn to the species account for more information and/or listen to the accompanying audio tracks available online, through Cornell's Lab of Ornithology. Identifying birds by sound is arguably the most challenging and important skill in birding. This book makes it vastly easier to master than ever before.

Senses in Cities Kelvin E.Y. Low, Devorah Kalekin-Fishman, 2017-10-05 Urban landscapes are usually thought of first and foremost as engineered formations designed for functionality. It is quite clear, however, that cities and towns are sites of social structure, scenes of diversity, and hotbeds of transgressions. They are also sources of satisfying social relationships, settings for actions negotiated on an everyday basis, and opportunities for kinesthetic and aesthetic experiences. Within these processes, the senses mediate engagement with the optimism of urban growth, the comfort of urban traditions, and a consciousness of the diverse relationships that embellish urban living, but also with the repellent sights and sounds that invade zones of comfort. This book examines how qualities of place and their sensuous reorganisation elucidate particular sociocultural expressions and practices in urban life. The collection illuminates how urban environments are distinguished, valued, or reconfigured with the senses as media for evaluating authentic spaces and places that endure and change over time.

Peterson Field Guide to Bird Sounds of Western North America Nathan Pieplow, 2019 A comprehensive field guide that uses an innovative Sound Index to allow readers to quickly identify unfamiliar songs and calls of birds in western North America. Bird songs and calls are at least as important as visual field marks in identifying birds. Yet short of memorizing each bird's repertoire, it's difficult to sort through them all. Now, with the western edition of this groundbreaking book, it's possible to visually distinguish bird sounds and identify birds using a field-guide format. At the core of this guide is the spectrogram, a visual graph of sound. With a brief introduction to five key aspects--speed, repetition, pauses, pitch pattern, and tone quality--readers can translate what they hear into visual recognition, without any musical training or auditory memorization. The Sound Index groups similar songs together, narrowing the identification choices quickly to a brief list of birds that are likely to be confused because of the similarity of their songs. Readers can then turn to the species account for more information and/or listen to the accompanying audio tracks available online. Identifying birds by sound is arguably the most challenging and important skill in birding. This book makes it vastly easier to master than ever before.
