Small Wars, Big Data Eli Berman,Joseph H. Felter,Jacob N. Shapiro,2020-07-14 How a new understanding of warfare can help the military fight today's conflicts more effectively. The way wars are fought has changed starkly over the past sixty years. International military campaigns used to play out between large armies at central fronts. Today's conflicts find major powers facing rebel insurgencies that deploy elusive methods, from improvised explosives to terrorist attacks. Small Wars, Big Data presents a transformative understanding of these contemporary confrontations and how they should be fought. The authors show that a revolution in the study of conflict--enabled by vast data, rich qualitative evidence, and modern methods--yields new insights into terrorism, civil wars, and foreign interventions. Modern warfare is not about struggles over territory but over people; civilians--and the information they might choose to provide--can turn the tide at critical junctures. The authors draw practical lessons from the past two decades of conflict in locations ranging from Latin America and the Middle East to Central and Southeast Asia. Building an information-centric understanding of insurgencies, the authors examine the relationships between rebels, the government, and civilians. This approach serves as a springboard for exploring other aspects of modern conflict, including the suppression of rebel activity, the role of mobile communications networks, the links between aid and violence, and why conventional military methods might provide short-term success but undermine lasting peace. Ultimately the authors show how the stronger side can almost always win the villages, but why that does not guarantee winning the war. Small Wars, Big Data provides groundbreaking perspectives for how small wars can be better strategized and favorably won to the benefit of the local population.

  Location Technologies in International Context Rowan Wilken,Gerard Goggin,Heather A. Horst,2019-01-21 Location Technologies in International Context offers the first international account of location technologies (in an expanded sense) and brings together a range of contributions on these technologies and their various cultures of use within the Global South. This collection asks: How, within the Global South, do location technologies differ across national markets, geo-linguistic communities and cultural contexts? What are the contrasting or shared meanings and practices associated with location technologies? And what innovative practices and new (or reinvigorated) theory may emerge from attention to the Global South? In exploring these questions, the collection contributes to our understanding of social, cultural, gendered and political relations on a global and local scale. Location Technologies in International Context is ideal for a range of disciplines, including cultural, communication and media studies; anthropology, sociology and geography; new media, Internet and mobile studies; and informatics and development studies.

  Image Politics in the Middle East Lina Khatib,2012-10-22 Politics in the Middle East is now 'seen' and the image is playing a central part in

processes of political struggle. This is the first book in the literature to engage directly with these changing ways of communicating politics in the region - and particularly with the politics of the image, its power as a political tool. Lina Khatib presents a cross-country examination of emerging trends in the use of visuals in political struggles in the Middle East, from the Cedar Revolution in Lebanon to the Green Movement in Iran, to the Arab Spring in Egypt, Syria and Libya. She demonstrates how states, activists, artists and people 'on the street' are making use of television, the social media and mobile phones, as well as non-electronic forms, including posters, cartoons, billboards and graffiti to convey and mediate political messages. She also draws attention to politics as a visual performance by leaders and citizens alike. With a particular focus on the visual dynamics of the Arab Spring, and based on case studies on the visual dimension of political protest as well as of political campaigning and image management by political parties and political leaders, Image Politics in the Middle East shows how visual expression is at the heart of political struggle in the Middle East today. It is a hard-hitting, enjoyable, groundbreaking book, challenging the traditional ways in which politics in the Middle East is conceived of and analysed.

Leading from the Periphery and Network Collective Action Navid Hassanpour,2017-02-17 Political revolutions, economic meltdowns, mass ideological conversions and collective innovation adoptions occur often, but when they do happen, they tend to be the least expected. Based on the paradigm of 'leading from the periphery', this groundbreaking analysis offers an explanation for such spontaneity and apparent lack of leadership in contentious collective action. Contrary to existing theories, the author argues that network effects in collective action originating from marginal leaders can benefit from a total lack of communication. Such network effects persist in isolated islands of contention instead of overarching action cascades, and are shown to escalate in globally dispersed, but locally concentrated networks of contention. This is a trait that can empower marginal leaders and set forth social dynamics distinct from those originating in the limelight. Leading from the Periphery and Network Collective Action provides evidence from two Middle Eastern uprisings, as

well as behavioral experiments of collective risk-taking in social networks.

  AI Embedded Assurance for Cyber Systems Cliff Wang,S.S. Iyengar,Kun Sun,2024-01-13 The rapid growth and reliance on cyber systems have permeated our society, government, and military which is demonstrated in this book. The authors discuss how AI-powered cyber systems are designed to protect against cyber threats and ensure the security and reliability of digital systems using artificial intelligence (AI) technologies. As AI becomes more integrated into various aspects of our lives, the need for reliable and trustworthy AI systems becomes increasingly important. This book is an introduction to all of the above-mentioned areas in the context of AI Embedded Assurance for Cyber Systems. This book has three themes. First, the AI/ML for digital forensics theme focuses on developing AI and ML powered forensic tools, techniques, software, and hardware. Second, the AI/ML for cyber physical system theme describes that AI/ML plays an enabling role to boost the development of cyber physical systems (CPS), especially in strengthening the security and privacy of CPS. Third, the AI/ML for cyber analysis theme focuses on using AI/ML to analyze tons of data in a timely manner and identify many complex threat patterns. This book is designed for undergraduates, graduate students in computer science and researchers in an interdisciplinary area of cyber forensics and AI embedded security applications. It is also useful for practitioners who would like to adopt AIs to solve cyber security problems.

  Global Perspectives on Press Regulation, Volume 2 Paul Wragg,András Koltay,2024-02-22 In this ground-breaking two-volume set, world-leading experts produce a rich, authoritative depiction of the world's press, its freedom, and its limits. We want press freedom but we also want freedom from the press. A powerful press may expose corrupt government or aid it. It may champion citizens or unfairly attack them. A vulnerable press may lack supporters and succumb to conformity. It may resist, and overcome tyranny. According to common belief, press freedom involves social responsibilities to equip public debate and render government transparent. Is this attitude valid given that the press is usually a private, commercial actor? Globally, the health, authority, and viability of the press varies dramatically. These patterns do not conform to traditional divisions between North and South, East and West. Instead, they are much more complex. How do we measure successful press regulation? What concessions can the state and/or society

demand of the press? What constitutes the irreducible core of press freedom? The contributions in Volume 1 look at key jurisdictions in Europe; whereas Volume 2 goes beyond Europe to analyse the situation in key jurisdictions in Asia, Africa, the Americas and Oceania. Each volume can be used independently or as part of the complete set. This work will be incredibly valuable to policy makers and academics who seek to capture the global picture for the purposes of effecting change.

When the Lights Went Out David E. Nye,2010-01-29 Blackouts—whether they result from military planning, network failure, human error, or terrorism—offer snapshots of electricity's increasingly central role in American society. Where were you when the lights went out? At home during a thunderstorm? During the Great Northeastern Blackout of 1965? In California when rolling blackouts hit in 2000? In 2003, when a cascading power failure left fifty million people without electricity? We often remember vividly our time in the dark. In When the Lights Went Out, David Nye views power outages in America from 1935 to the present not simply as technical failures but variously as military tactic, social disruption, crisis in the networked city, outcome of political and economic decisions, sudden encounter with sublimity, and memories enshrined in photographs. Our electrically lit-up life is so natural to us that when the lights go off, the darkness seems abnormal. Nye looks at America's development of its electrical grid, which made large-scale power failures possible and a series of blackouts from military blackouts to the "greenout" (exemplified by the new tradition of "Earth Hour"), a voluntary reduction organized by environmental organizations. Blackouts, writes Nye, are breaks in the flow of social time that reveal much about the trajectory of American history. Each time one occurs, Americans confront their essential condition—not as isolated individuals, but as a community that increasingly binds itself together with electrical wires and signals.

The Great Firewall of China James Griffiths,2021-10-21 China's 'Great Firewall' has evolved into the most sophisticated system of online censorship

in the world. As the Chinese internet grows and online businesses thrive, speech is controlled, dissent quashed, and attempts to organise outside the official Communist Party are quickly stamped out. Updated throughout and available in paperback for the first time, The Great Firewall of China draws on James Griffiths' unprecedented access to the Great Firewall and the politicians, tech leaders, dissidents and hackers whose lives revolve around it. New chapters cover the suppression of information about the first outbreak of COVID-19 in Wuhan, disinformation campaigns in response to the exposure of the persecution of Uyghur communities in Xinjiang and the crackdown against the Umbrella movement in Hong Kong.

Winds of Change Cyrus Rohani,Behrooz Sabet,2019-11-07 Recent developments in the Middle East and North Africa have radically destabilised the region, which is beset with rising religious and political tensions, sectarian conflict and terrorism. Though in crisis and suffering from a paralysis of will, the region is also vastly rich in culture, and vital for the stability of the international order. There is an urgent need for an accurate understanding of these complex developments. What does the future hold for this geopolitically critical region? In this vital multidisciplinary volume, leading Middle Eastern and Western scholars present constructive, long-term solutions to endemic sociocultural, economic and political issues facing the MENA region — issues which require a fundamental transformation of the current system of values and patterns of thought. They offer expert analysis on critical facets of the region, including globalisation, the environment and sustainability, education, nonviolence, human rights, inter-religious coexistence, Islamic social principles, and Qur'anic ethics. Enriching our understanding of the contemporary affairs of the MENA region, Winds of Change is essential reading for achieving peace, socio-cultural progress and prosperity in the region.

Mobile Internet Apostolis K. Salkintzis,2004-04-13 Consumers want it, businesses are demanding it. The migration of Internet services to a mobile environment is inevitable. Hammer of the Caliphate Dave Dilegge,2018-04-09 Part of the Small Wars Journal (SWJ) Anthology, Hammer of the Caliphate is a continuation of previous works on the Islamic State, Al-Qaeda, and their affiliate groups. The anthology title is a play on words related to the fifteenth-century treatise Malleus Maleficarum (Hammer of the Witches). Given the Islamic State's predisposition for engaging in heinous acts and barbaric atrocities in the name of their apocalyptic god, one derived from a perverted version of what mainstream Islam is today, declaring IS anathema to our modern world seems only fitting. The work represents the fifth volume in the SWJ series of

radical Islamist-focused anthologies.

Making Electricity Resilient Antti Silvast,2017-04-21 Energy risk and security have become topical matters in Western and international policy discussions; ranging from international climate change mitigation to investment in energy infrastructures to support economic growth and more sustainable energy provisions. As such, ensuring the resilience of more sustainable energy infrastructures against disruptions has become a growing concern for high-level policy makers. Drawing on interviews, participant observation, policy analysis, and survey research, this book unpacks the work of the authorities, electricity companies, and lay persons that keeps energy systems from failing and helps them to recover from disruptions if they occur. The book explores a number of important issues: the historical security policy of energy infrastructures; control rooms where electricity is traded and maintained in real time; and electricity consumers in their homes. Presenting case studies from Finland and Scandinavia, with comparisons to the United States, the United Kingdom, and the European Union at large, Making Electricity Resilient offers a detailed and innovative analysis of long-term priorities and short-term dynamics in energy risk and resilience. This book will be of great interest to students and scholars of energy policy and security, and science and technology studies.
