Mental Spaces in Grammar Barbara Dancygier,Eve Sweetser,2005-07-07 Conditional constructions have long fascinated linguists, grammarians and philosophers. In this pioneering new study, Barbara Dancygier and Eve Sweetser offer a new descriptive framework for the study of conditionality, broadening the range of richly described conditional constructions. They explore theoretical issues such as the mental-space-building processes underlying conditional thinking and the form-meaning relationship involved in expressing conditionality. Using a broad range of attested English conditional constructions, the book examines inter-constructural relationships. Within the framework of Mental Spaces Theory, shared parameters of meaning are shown to be relevant to conditional constructions generally, as well as related temporal and causal constructions. This significant contribution to the field will be welcomed by a wide range of researchers in theoretical and cognitive linguistics.

Causal Categories in Discourse and Cognition Ted Sanders,Eve Sweetser,2009 Review text: With all these contributions, this collection definitely constitutes a high quality volume in this research area and is a valuable reference to anyone who is interested in discourse and cognition.Han-wei in: Discourse Studies 3/2011

The Way We Think Gilles Fauconnier,Mark Turner,2008-08-06 In its first two decades, much of cognitive science focused on such mental functions as memory, learning, symbolic thought, and language acquisition -- the functions in which the human mind most closely resembles a computer. But humans are more than computers, and the cutting-edge research in cognitive science is increasingly focused on the more mysterious, creative aspects of the mind. *The Way We Think* is a landmark synthesis that exemplifies this new direction. The theory of conceptual blending is already widely known in laboratories throughout the world; this book is its definitive statement. Gilles Fauconnier and Mark Turner argue that all learning and all thinking consist of blends of metaphors based on simple bodily experiences. These blends are then themselves blended together into an increasingly rich structure that makes up our mental functioning in modern society. A child's entire development consists of learning and navigating these blends. *The Way We Think* shows how this blending operates; how it is affected by (and gives rise to) language, identity, and concept of category; and the rules by which we use blends to understand ideas that are new to us. The result is a bold, exciting, and accessible new view of how the mind works.

Using Language Herbert H. Clark,1996-05-16 Herbert Clark argues that language use is more than the sum of a speaker speaking and a listener listening. It is the joint action that emerges when speakers and listeners, writers and readers perform their individual actions in coordination, as ensembles. In contrast to work within the cognitive sciences, which has seen language use as an individual process, and to work within the social sciences, which has seen it as a social process, the author argues strongly that language use embodies both individual and social processes.

The Shared Mind Jordan Zlatev,2008 The cognitive and language sciences are increasingly oriented towards the social dimension of human cognition and communication. The hitherto dominant approach in modern cognitive science has viewed social cognition through the prism of the traditional philosophical puzzle of how individuals solve the problem of understanding Other Minds. *The Shared Mind* challenges the conventional theory of mind approach, proposing that the human mind is fundamentally based on intersubjectivity the sharing of affective, conative, intentional and cognitive states and processes between a plurality of subjects. The socially shared, intersubjective foundation of the human mind is manifest in the structure of early interaction and communication, imitation, gestural communication and the normative and argumentative nature of language. In this

path breaking volume, leading researchers from psychology, linguistics, philosophy and primatology offer complementary perspectives on the role of intersubjectivity in the context of human development, comparative cognition and evolution, and language and linguistic theory.

Grammar in Interaction Cecilia E. Ford, 1993-04-08 Cecilia E. Ford explores the question: what work do adverbial clauses do in conversational interaction? Her analysis of this predominating conjunction strategy in English conversation is based on the assumption that grammars reflect recurrent patterns of situated language use, and that a primary site for language is in spontaneous talk. She considers the interactional as well as the informational work of talk and shows how conversationalists use grammar to coordinate their joint language production. The management of the complexities of the sequential development of a conversation, and the social roles of conversational participants, have been extensively examined within the sociological approach of Conversation Analysis. Dr Ford uses Conversation Analysis as a framework for the interpretation of interclausal relations in her database of American English conversations. Her book contributes to a growing body of research on grammar in discourse, which has until recently remained largely focused on monologic rather than dialogic functions of language.

Conditionals and Prediction Barbara Dancygier, 1999-01-13 This book offers a new and in-depth analysis of English conditional sentences. In a wide-ranging discussion, Dancygier classifies conditional constructions according to time-reference and modality. She shows how the basic meaning parameters of conditionality correlate to formal parameters of the linguistic constructions which are used to express them. Dancygier suggests that the function of prediction is central to the definition of conditionality, and that conditional sentences display certain formal features which correlate to aspects of interpretation. Although the analysis is based primarily on English, it provides a theoretical framework that can be extended cross-linguistically to a broad range of grammatical phenomena. It will be essential reading for scholars and students concerned with the role of conditionals in English and many other languages.

Foundations of Cognitive Grammar Ronald W. Langacker, 1987 This is the first volume of a two-volume work that introduces a new and fundamentally different conception of language structure and linguistic investigation. The central claim of cognitive grammar is that grammar forms a continuum with lexicon and is fully describable in terms of symbolic units (i.e. form-meaning pairings). In contrast to current orthodoxy, the author argues that grammar is not autonomous with respect to semantics, but rather reduces to patterns for the structuring and symbolization of conceptual content. Reviews It is impossible within the limits of a review to discuss, or even do justice to, the wealth of information and genuine insights that the book contains. . . . Let us look forward to seeing the continuation of this promising approach to language. Langacker has written a highly stimulating first part; it will be exciting to see the sequel. Canadian Journal of Linguistics It represents important changes in the thrust of linguistic approaches to language. . . . It is rich, full, and thought-provoking. . . . The issues it raises are significant and will be much debated in the future. Linguistic Anthropology Understanding Langacker's grammar is made easier by the fact that, instead of using mathematical formalisms to prove his points, he uses common knowledge of language to persuade the reader. . . . The book is valuable for several factors in addition to its clarification of grammar. The insights into verbal thought and meaning are prime reasons for recommending the book to the semantically inclined. Et cetera

Subjectivity and Subjectivisation Dieter Stein, Susan Wright, 1995-11-30 The notion of subjectivity explored here concerns expression of self and the representation of a speaker's perspective or point of view in discourse. Subjectivization involves the structures and strategies that languages evolve in the linguistic realization of subjectivity and the relevant processes of linguistic evolution themselves. This volume reflects the growing attention in linguistics and related disciplines commanded by the centrality of the speaker in language. An international team of contributors offers a series of studies on grammatical, diachronic, and literary aspects of subjectivity and subjectivization, from a variety of perspectives including literary stylistics, historical linguistics, formal semantics, and discourse analysis. The essays look at the role of the perspective of locutionary agents, their

expression of affect and modality in linguistic expressions and discourse, and the effects of these phenomena on the formal shape of discourse. This volume demonstrates how deeply embedded in linguistic expression subjectivity is, and how central to human discourse.

The Semantics of Coordination Ewald Lang, 1984-01-01 This study is an attempt to explain coordinate conjoining as a rule-governed process of establishing specific semantic relations within and between sentences. Coordination is thus conceived of both as a basic device of linguistic complex formation and as a rather fundamental principle underlying the creation of the text. From the point of view of achieving coherence, coordinate conjoining is described in this monograph as an integrative process. Described are the conditions governing this process, the rules according to which take place, in short: the complex interaction of various linguistically identifiable features displayed by coordinate structures. Coordinate conjoining is regarded here as the result of the interplay of three factors which belong to distinct levels of semantic description: the meaning of the conjuncts, the relation between the meaning of the conjuncts and the meaning of the connectors. The step-by-step explication of the interaction of these levels in determining the semantic interpretation of coordinate structures forms the core of the present study.

Processing Interclausal Relationships Jean Costermans, Michel Fayol, 2014-03-18 During the last 10 years, more and more linguistic and psycholinguistic research has been devoted to the study of discourse and written texts. Much of this research deals with the markers that underline the connections and the breaks between clauses and sentences plus the use of these markers -- by adults and children -- in the production and comprehension of oral and written material. In this volume, major observations and theoretical views from both sides of the Atlantic are brought together to appeal to a wide range of linguists, psychologists, and speech therapists. The volume presents contributions from researchers interested specifically in adult language and from others concerned with developmental aspects of language. Some contributors deal primarily with production, whereas others concentrate on comprehension. Some direct their attention to oral discourse while others focus on written texts. To preserve overall coherence, however, the contributors were given the following recommendations: * With regard to the level of linguistic analysis, the emphasis should be on the clause level -- more particularly, on the relationships between clauses. * Special emphasis should also be placed on linguistic markers (e.g., connectives, markers of segmentation, punctuation). * An overview of a given field of research should be offered, and current research should be put into perspective. * For contributors in the developmental field, attention should be paid to the fact that an account of the acquisition of some language functions throughout childhood should be included only if general principles of interclause relations that might be masked by the exclusive examination of adult evidence could be derived from it.

Discourse and Perspective in Cognitive Linguistics Wolf-Andreas Liebert, Gisela Redeker, Linda R. Waugh, 1997-01-01 Cognitive models, perspectives, and the construction of situated meaning have always been core concepts in Cognitive Linguistics. The papers in this volume present applications of those concepts to the study of discourse phenomena like the use and interpretation of metaphors, modal expressions, focus particles, tag questions, indirect speech acts, and iconographic textual references. The volume also includes two studies focussing on cognitive processes involved in discourse production.

Theory of Language Karl Bühler, 2011-04-27 Karl Bühler (1879-1963) was one of the leading theoreticians of language of the twentieth century. Although primarily a psychologist, Bühler devoted much of his attention to the study of language and language theory. His masterwork *Sprachtheorie* (1934) quickly gained recognition in the fields of linguistics, semiotics, the philosophy of language and the psychology of language. This new edition of the English translation of Bühler's theory begins with a survey on 'Bühler's legacy' for modern linguistics (Werner Abraham), followed by the *Theory of Language*, and finally with a special 'Postscript: Twenty-five Years Later ...' (Achim Eschbach). Bühler's theory is divided into four parts. Part I discusses the four axioms or principles of language research, the most famous of which is the first, the organon model, the base of Bühler's instrumental view of

language. Part II treats the role of indexicality in language and discusses deixis as one determinant of speech. Part III examines the symbolic field, dealing with context, onomatopoeia and the function of case. Part IV deals with the elements of language and their organization (syllabification, the definition of the word, metaphor, anaphora, etc).The text is accompanied by an Introduction (Achim Eschbach); Translator's preface (Donald Fraser Goodwin); Glossary of terms; and a Bibliography of cited works.

The Development of Dutch Connectives Jacqueline Evers-Vermeul,2005

Form and Function of Causation Liesbeth Degand,2001 The aim of this study is to provide a unified functional description of a number of causal constructions in Dutch: the connectives *omdat*, *want*, *doordat*, the prepositions *door*, *vanwege*, *wegens*, and the auxiliaries *doen* and *laten*. Given the observation that the various causal alternatives are not in free variation in discourse, the author hypothesises that this distribution must be constrained and that it should be possible to identify some of the constraints that play a role in the selection of these causal forms. To reach this goal, Degand proposes to make use of a multifunctional theory of language - Systemic Functional Linguistics - in combination with numerous corpus analyses. This approach to language appeared to be particularly relevant, because it enables to give an explicit account of aspects of language that fall out of the traditional scope of linguistic description, namely accounts of genre, register, discourse semantics, etc. while the corpus analyses provide a solid empirical basis for the theoretical descriptions.
