Ubiquitous Mobile Information and Collaboration Systems Luciano Baresi,Schahram Dustdar,Harald Gall,Maristella Matera,2005-03-01 Over recent years most business processes have changed in various dimensions (e. g. , ?exibility, interconnectivity, coordination style, autonomy) due to market conditions, organizational models, and usage scenarios of information systems. Frequently, inf-mationisrelocatedwithinageographicallydistributedsystemaccordingtorulesthatare only seldom de?ned as a well-codi?ed business process. This creates the need for a so- ware infrastructure that enables ubiquitous mobile and collaboration systems (UMICS). The anywhere/anytime/any means paradigm is becoming the major challenge in conceiving, designing, and releasing next-generation information systems. New te- nologies, like wi-? networks and 3rd-generation mobile phones, are offering the infr- tructure to conceive of information systems as ubiquitous information systems, that is, systems that are accessible from anywhere, at any time, and with any device. Ubiquity is not yet another buzzword pushed by emerging technologies, but is mainly a means to support new business models and encourage new ways of working. This new wave of UMICS will exploit the knowledge developed and deployed for conventional infor- tion systems, but will also need new concepts, models, methodologies, and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge. Moreover, people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations. The ability to query the company's distributed knowledge base and to cooperate with co-workers is still a requirement, but mobility brings new access scenarios and higher complexity.

Telecommunications, Broadcasting and the Internet Laurent J. H. F. Garzaniti,Matthew O'Regan,2010 Sweet and Maxwell Statutes offer accurate and comprehensive coverage of all core and several popular optional subjects on current law courses. Compiled using data from WestlawUK, each text provides the most up-to-date statutory material. This statute book covers environmental law.

Hypercrime Michael McGuire,2007-12-06 Hypercrime develops a new theoretical approach toward current reformulations in criminal behaviours, in particular the phenomenon of cybercrime. Emphasizing a spatialized conception of deviance, one that clarifies the continuities between crime in the traditional, physical context and developing spaces of interaction such as a 'cyberspace', this book analyzes criminal behaviours in terms of the destructions, degradations or incursions to a hierarchy of regions that define our social world. Each chapter outlines violations to the boundaries of each of these spaces - from those defined by our bodies or our property, to the more subtle borders of the local and global spaces we inhabit. By treating cybercrime as but one instance of various possible criminal virtualities, the book develops a general theoretical framework, as equally applicable to the, as yet unrealized, technologies of criminal behaviour of the next century, as it is to those which relate to contemporary computer networks. Cybercrime is thereby conceptualized as one of a variety of geometries of harm, merely the latest of many that have extended opportunities for illicit gain in the physical world. Hypercrime offers a radical critique of the narrow conceptions of cybercrime offered by current justice systems and challenges the governing presumptions about the nature of the threat posed by it. up for the British Society of Criminology Book Prize (2008).

Data Dissemination and Query in Mobile Social Networks Jiming Chen,Jialu Fan,Youxian Sun,2012-03-27 With the increasing popularization of personal hand-held mobile devices, more people use them to establish network connectivity and to query and share data among themselves in the absence of network infrastructure, creating mobile social networks (MSNet). Since users are only intermittently connected to MSNets, user mobility should be exploited to bridge network partitions and forward data. Currently, data route/forward approaches for such intermittently connected networks are commonly store-carry-and-forward schemes, which exploit the physical user movements to carry data around the network and overcome path disconnection. And since the source and destination may be far away from each other, the delay for the destination to receive the data from the source may be long. MSNets can be viewed as one type of socially-aware delay tolerant networks (DTNs). Observed from social networks, the contact frequencies are probably different between two friends and two strangers, and this difference should be taken into consideration when designing data dissemination and query schemes in MSNets. In this book, the fundamental concepts of MSNets are introduced including the background, key features and potential applications of MSNets, while also presenting research topics, such as, MSNets as realistic social contact traces and user mobility models. Because the ultimate goal is to establish networks that allow mobile users to quickly and efficiently access interesting information, particular attention is paid to data dissemination and query schemes in subsequent sections. Combined with geography information, the concepts of community and centrality are employed from a social network perspective to propose several data dissemination and query schemes, and further use real social contact traces to evaluate their performance, demonstrating that such schemes achieve better performance when exploiting more social relationships between users.

Offacial Blue Nourhan Hamada,Nourhan Hamada Esmail Eldraginy,2019-02-14 The online chat application is great but it costs a lot of money to be online and you have to charge your phone battery more than two times a day, so we developed Offcial Blue Chat application. Our project is to develop an android chat application based on Bluetooth connection to reduce the battery usage and make the communication with people around you easily without the need to be online, without charge. Our application allow the users around Bluetooth connection area to communicate with each other by sending free text messages, share real-time images by capture an image using camera or choose from the gallery, and file-share among the application without the need of close the application and send files such as images, videos, mp3, zip, etc.

Hardware Security and Trust Nicolas Sklavos,Ricardo Chaves,Giorgio Di Natale,Francesco Regazzoni,2017-01-11 This book provides a comprehensive introduction to hardware security, from specification to implementation. Applications discussed include embedded systems ranging from small RFID tags to satellites orbiting the earth. The authors describe a design and synthesis flow, which will transform a given circuit into a secure design incorporating counter-measures against fault attacks. In order to address the conflict between testability and security, the authors describe innovative design-for-testability (DFT) computer-aided design (CAD) tools that support security challenges,

engineered for compliance with existing, commercial tools. Secure protocols are discussed, which protect access to necessary test infrastructures and enable the design of secure access controllers.
