**Safe Mobility** Dominique Lord,Simon Washington,2018-04-18 This book increases the level of knowledge on road safety contexts, issues and challenges; shares what can currently be done to address the variety of issues; and points to what needs to be done to make further gains in road safety.

**Just Urban Design** Kian Goh,Anastasia Loukaitou-Sideris,Vinit Mukhija,2022-11-22 Contributions by urban planners, sociologists, anthropologists, architects, and landscape architects on the role and scope of urban design in creating more just and inclusive cities. Scholars who write about justice and the city rarely consider the practices and processes of urban design, while discourses on urban design often neglect concerns about justice. The editors of Just Urban Design take the position that urban design interventions have direct and important implications for justice in the city. The contributions in this volume contextualize the state of knowledge about urban design for justice, stress inclusivity as the key to justice in the city, affirm community participation and organizing as cornerstones of greater equity, and assert that a just urban design must center and privilege our most marginalized individuals and communities. Approaching spatial and social justice in the city through the lens of urban design, the contributors explore the possibility of envisioning and delivering social, spatial, and environmental justice in cities through urban design and the material reality of built environment interventions. The editors' combined expertise includes urban politics and climate change, public space, mobility justice, community development, housing, and informality, and the contributors include researchers and practitioners from urban planning, sociology, anthropology, architecture, and landscape architecture. Contributors: Rachel Berney, Rebecca Choi, Teddy Cruz, Diane E. Davis, Fonna Forman, Christopher Giamarino, Kian Goh, Alison B. Hirsch, Jeffrey Hou, Anastasia Loukaitou-Sideris, Setha Low, Matthew Jordan Miller, Vinit Mukhija, Chelina Odbert, Francesca Piazzoni, and Michael Rios.

**A Life Course Approach to Healthy Ageing** Diana Kuh,Rachel Cooper,Rebecca Hardy,Marcus Richards,Yoav Ben-Shlomo,2014 This title investigates the lifetime determinants of healthy ageing and their implications for policy and practice, bringing together authorities in ageing research and knowledge transfer from across the world.

**Public Health for an Aging Society** Thomas R. Prohaska,Lynda A. Anderson,Robert H. Binstock,2012-03-15 Students and practitioners will find

The development of ballistic missiles in the United States Air Force 1945-1960 ,

**The Development of Ballistic Missiles in the United States Air Force, 1945-1960** Jacob Neufeld,1990 Following World War II, the onset of nuclear weapons, long-range jet bombers, and ballistic missiles radically changed American foreign policy and military strategy. The United States Air Force, led by men of far-sighted vision and uncommon dedication, accepted the challenge of organizing and leading a massive research and development effort to build ballistic missiles. In the quarter of the century since, these weapons have constituted one of the tree legs of the strategic triad, the basis of AmericaÆs strategy of deterring nuclear war, yet they have received less attention from the public and within the Air Force than the more glamorous manned bombers of the Strategic Air Command or the missile-launching submarines of the U.S. Navy. This volume attempts to correct the imbalance by telling the story of development of Air Force ballistic Missiles. It concentrates on the first generation of ballistic missiles: the intercontinental Atlas and Titan, and the intermediate range Thor. Although the effort to develop rockets has a longer history than commonly assumed, the modern history spans the relatively short era from 1945 to 1960. During this brief interval, missiles advanced from drawing board to alert status, where the next generation now remains poised to deter war

*Geriatrics* Craig Atwood,2012-02-24 With the baby boomer generation reaching 65 years of age, attention in the medical field is turning to how best to meet the needs of this rapidly approaching, large population of geriatric individuals. Geriatric healthcare by nature is multi-dimensional, involving medical, educational, social, cultural, religious and economic factors. The chapters in this book illustrate the complex interplay of these factors in the development, management and treatment of geriatric patients, and begin by examining sarcopenia, cognitive decline and dysphagia as important factors involved in frailty syndrome. This is followed by strategies to increase healthspan and lifespan, such as exercise, nutrition and immunization, as well as how physical, psychological and socio-cultural changes impact learning in the elderly. The final chapters of the book examine end of life issues for geriatric patients, including effective advocacy by patients and families for responsive care, attitudes toward autonomy and legal instruments, and the cost effectiveness of new health care technologies and services.

*Transit Crime and Sexual Violence in Cities* Vania Ceccato,Anastasia Loukaitou-Sideris,2020-05-17 How cities are planned and designed has a

major impact on individuals' mobility and safety. If individuals feel unsafe in public transportation or on the way to it, they may avoid certain routes or particular times of the day. This is problematic, since research has also found that, in some cities, especially those in the Global South, a large percentage of women are transit captives. Namely, they have relatively less access to non-public forms of transportation and are, therefore, especially reliant on public transport. This issue is important not only because it affects people's safety but also because it influences the long-term sustainability of a city. In a sustainable city, safety guarantees the ability to move freely for everyone and provides a wider sense of place attachment. *Transit Crime and Sexual Violence in Cities* examines the evidence of victimization in transit environments in countries around the world, exploring individuals' feelings of perceived safety or lack thereof and the necessary improvements that can make transit safer and, hence, cities more sustainable. The book's contributions are grounded in theories at the crossroads of several disciplines such as environmental criminology, architecture and design, urban planning, geography, psychology, gender and LGBTQI studies, transportation, and law enforcement. International case studies include Los Angeles, Vancouver, Stockholm, London, Paris, São Paulo, Mexico City, Bogotá, Tokyo, Guangzhou, Melbourne, and Lagos, among others.

**Resilience and Aging** Andrew V. Wister, Theodore D. Cosco, 2021-01-04 Older aged adults face many adversities over the later life course. This edited volume will address the ways in which seniors bounce back from different types and combinations of adversity – termed “resilience”. While research has been accumulating that identifies inherent abilities and external resources needed to adapt and navigate stress-inducing experiences among aging and older adults, gaps remain in understanding the unique elements and processes of resilience. A series of chapters included in this book will address several overarching questions: why do some older individuals/families/communities adapt to adversity better than others; what are modifiable behavioral protective/risk factors related to resilience; and how can we foster resilience at the individual/community level and which approaches show the most promise? The spectrum of aging-related challenges and responses addressed in this book include: mental health; physical/functional health problems; multimorbidity; socio-economic deprivation; social isolation and loneliness; cultural dimensions of loneliness; housing/homelessness problems; and environmental disasters. This book presents cutting-edge science at the conceptual, methodological, empirical and practice levels applied to emerging resilience sub-fields in gerontology. It will also present potential areas of future research, policy and practice linked to these areas. During a period of the most rapid population aging in the US, Canada and many other nations, coupled with heightened global socio-

political change, extending our knowledge of resilience will help society to make important adjustments to maximize health and wellness of older individuals. Supporting and enhancing resilience through technological, social and/or community-level advances in geroscience will help those facing adversity to thrive by harnessing, stretching, and leveraging a wide array of potential resources. The promotion of healthier older populations has far-reaching consequences for health care and social/community support systems, both in terms of public health including pandemic response, and the development and implementation of innovations in treatment and practice guidelines.

**Mobilities and Health** Anthony C. Gatrell,2016-07-22 Looking at health and health care in a new way, this book examines health risks and benefits as encountered 'on the move' rather than focusing on the risks and benefits incurred at fixed locations. The provision and utilization of health care is also investigated, as produced/delivered and consumed/accessed in mobile settings. Engaging with the contemporary concern with 'mobilities' this book covers many forms of movement and flow, including movements of people, disease, information and health care. The issues and problems which are considered - whether re-emerging infections, displaced persons, or the 'risks' of globalised travel - are of current and ongoing concern. Drawing on three main disciplines, geography, sociology, and epidemiology, author Tony Gatrell makes strong connections between these areas of inquiry, drawing on (for example) social theorising, geographical concepts, and epidemiological methods and data. The book will be of interest to the growing number of geographers working on the geography of health, along with social scientists involved in the mobilities 'turn'. More broadly, as issues of global public health that invariably involve the movements of people, goods, viruses and information continue to hit the headlines, the book is both timely and of policy relevance.

**Healthy Aging and the Community Environment** Chanam Lee,Xuemei Zhu,Anna Patricia Lane,Erja Portegijs,2021-11-29

**Optimal Mobility and Function across the Lifespan** Ronald F. Zernicke,David Arthur Hart,2021-03-12

**Routledge Handbook of Asian Cities** Richard Hu,2023-05-31 This handbook provides the most comprehensive examination of Asian cities—developed and developing, large and small—and their urban development. Investigating the urban challenges and opportunities of cities from every nation in Asia, the handbook engages not only the global cities like Shanghai, Tokyo, Singapore, Seoul, and Mumbai but also less studied cities like Dili, Malé, Bandar Seri Begawan, Kabul, and Pyongyang. The handbook discusses Asian cities in alignment to the United Nations' New Urban

Agenda and Sustainable Development Goals in order to contribute to global policy debates. In doing so, it critically reflects on the development trajectories of Asian cities and imagines an urban future, in Asia and the world, in the post-sustainable, post-global, and post-pandemic era. Presenting 43 chapters of original, insightful research, this book will be of interest to scholars, practitioners, students, and general readers in the fields of urban development, urban policy and planning, urban studies, and Asian studies.

**The Epidemiology of Aging** Anne Newman, Jane A. Cauley, 2012-12-12 The average age of the world's population is increasing at an unprecedented rate and this increase is changing the world. This "Silver tsunami" emphasizes the need to provide advanced training in epidemiology and increase the cadre of experts in the study of aging. This book is designed to summarize unique methodological issues relevant to the study of aging, biomarkers of aging and the biology/physiology of aging and in-depth discussions of the etiology and epidemiology of common geriatric syndromes and diseases. Contributing authors in the book represent many disciplines, not only epidemiology and clinical geriatrics, but also demography, health services, research, cardiovascular disease, diabetes, psychiatry, neurology, social services, musculoskeletal diseases and cancer. The aim of the book is to provide a broad multidisciplinary background for any student/researcher interested in aging. The material in the book is organized and comprehensive. It represents the most up-to-date information on the scientific issues in aging research written by academics who specialize in research and training in the broad field of aging. The structure and organization of the book reflects our course series in the Epidemiology of Aging starting with the broad issues of demography and methodology, and then addressing specific health conditions and geriatric conditions common to older persons.

**Update in Geriatrics** Somchai Amornyotin, 2021-04-14 Geriatric is a topic of great interest in medicine and among the general public. Population aging is an inevitable and irreversible demographic reality that is associated with welcome improvements in health care. The increase in life expectancy has led the very old to become the fastest-growing segment. The geriatric population experiences significant alterations of numerous organ systems as a result of the aging process. Normally, functional reserve and organ functions are declined in geriatric patients. The care of geriatric patients can be complex and will be a growing task. A balance between physiological and psychological alterations is required in these patients. Geriatric patients also have several co-morbidities including hypertension, cardiac disease, diabetes, cerebrovascular disease, and renal dysfunction.

**Handbook of Aging and the Social Sciences** Linda George, 2010-11-26 Handbook of Aging and the Social Sciences, Seventh Edition, provides

extensive reviews and critical evaluations of research on the social aspects of aging. It also makes available major references and identifies high-priority topics for future research. The book is organized into four parts. Part 1 reviews developments in the field of age and the life course (ALC) studies and presents guidelines on conducting cohort analysis. Part 2 covers the demographic aspects of aging; longevity trends; disability and aging; and stratification and inequality research. Part 3 includes chapters that examine socioeconomic position and racial/ethnic disparities in health at older ages; the role of social factors in the distribution, antecedents, and consequences of depression; and aspects of private wealth transfers and the changing nature of family gift-giving. Part 4 deals with pension reform in Europe; the political activities of older Americans; the future of retirement security; and gender differences in old age. The Handbook is intended for researchers, professional practitioners, and students in the field of aging. It can also serve as a basic reference tool for scholars, professionals, and others who are not presently engaged in research and practice directly focused on aging and the aged. Contains all the main areas of social science gerontological research in one volume Begins with a section on theory and methods Edited by one of the fathers of gerontology (Binstock) and contributors represent top scholars in gerontology

**Intrinsic capacity and resilience vs frailty: On the way to healthy aging** Elena Vladimirovna Frolova, Wee Shiong Lim, Beatrice Arosio, 2023-04-05

**Intelligent Assistive Technologies for Dementia** Fabrice Jotterand, Marcello Ienca, Tenzin Wangmo, Bernice Elger, 2019-09-02 The financial burden and the level of specialized care required to look after older adults with dementia has reached the point of a public health crisis. Older adults diagnosed and living with the disorder reached 35.6 million worldwide in 2010 and is expected to increase to 135.5 million in 2050, with costs soaring to \$1.1 trillion. In the face of the increasing burden this disorder poses to health care systems and the management of this patient population, intelligent assistive technologies (IATs) represent a remarkable and promising strategy to meet the need of persons suffering from dementia. These technologies aim at helping individuals compensate for specific physical and cognitive deficits, and maintain a higher level of independence at home and in everyday activities. However, the rapid development and widespread implementation of these technologies are not without associated challenges at multiple levels. An international and multidisciplinary group of authors provide future-oriented and in-depth analysis of IATs. Part I delineates the current landscape of intelligent assistive technologies for dementia care and age-related disability from a global perspective, while the contributions in Part II analyze and address the major psycho-social implications linked to the development and clinical use of IATs. In the last section, essays examine the

major ethical, social and regulatory issues associated with the use of IATs in dementia care. This volume provides an authoritative and comprehensive overview of how IATs are reshaping dementia care.

**Rehabilitation Science in Context** Mieczyslaw Pokorski,2018-08-28 The focus of this book lies on novel aspects of rehabilitation medicine used as a treatment tool in both physical and mental spheres. The articles cover a diverse spectrum, such as rehabilitation in orthopedic pathologies, the exemplary of which is knee joint degeneration, in perioperative metastatic cancer diseases, or in neural degeneration requiring a transplant of donor nerve fibers into the defunct nerve. Advanced research studies involving proprioceptive neuromuscular facilitation, photobiomodulation, or yoga meditative techniques to regain functional ability are dealt with. The topic is expanded by a comprehensive picture of chosen molecular, genetically underpinned, diagnostics in hepatitis C infections and of novel ideas in drug design holding a curative promise in central neurodegeneration, such as development of brain-blood-barrier permeable oleic derivatives of the hydrophilic dopamine compound. The emerging rehabilitative modes and applications are posed to influence future health care delivery. The state-of-the art research is addressed to scientists, clinicians, therapists, and allied health care professionals.

**Geriatric Trauma and Critical Care** Fred A. Luchette,Jay A. Yelon,2017-07-30 With the expertise of an author panel of leading clinicians in the field of surgery, trauma, critical care and geriatrics the new edition of this text addresses the explosion in knowledge on the impact aging has on injury, acute illness and critical care management. The text covers the physiologic changes associated with aging, as well as the clinical assessment, stratification, and management of acute illness and injury. Furthermore, the new edition discusses the full spectrum of critical care management of the elderly. Part I explores the impact of aging on health and the healthcare system. There will be detailed discussion on the physiologic effects of aging and the impact on clinical management. The management of common surgical emergencies in the elderly is addressed in Part II. Part III addresses the evaluation and management of trauma and injury. Finally, Part IV explores the specific challenges of critical care management, including end-of-life and ethics, in the geriatric population. Updated information, reflective of the expansive literature, is addressed in all sections. New to the second edition are chapters on prehospital care, burns, nursing concerns, and abdominal solid organ injury. Appropriate chapters will include case vignettes and clinical algorithms. All chapters include a bullet-point summary. Geriatric Trauma and Critical Care, 2nd Edition will be of great value to trauma surgeons, acute care surgeons,

critical care specialists, emergency medicine physicians, geriatricians, general surgeons, and trainees in surgery, critical care, and emergency medicine. Advanced practice nurses, critical care nurses, and physician assistants will also find this a useful and practical resource.
