*Body Mass Index and Health* Linda A. Ferrera, 2005 The Federal guidelines on the identification, evaluation, and treatment of overweight and obesity in adults have defined overweight as a body mass index value between 25 and 29.9; and obesity as a body mass index value greater than or equal to 30. BMI is a ratio between weight and height. It is a mathematical formula that correlates with body fat, used to evaluate if a person is at an unhealthy weight (given a certain height). BMI value is more useful for predicting health risks than the weight alone (for adults ages 18 and up). Individuals with high BMI's are at increased risk of developing certain diseases, including: Hypertension, Cardiovascular Disease, Dyslipidemia, Adult-Onset Diabetes (Type II), Sleep Apnea, Osteoarthritis, Female Infertility, and other Conditions, including: idiopathic intracranial hypertension lower extremity venous stasis disease, gastroesophageal reflux and urinary stress incontinence. This new book gathers research from around the world in the critical field of obesity research and its effects.

*Africa RISING Baseline Evaluation Survey (ARBES) report for Ghana* Tinonin, Cecilia, Azzarri, Carlo, Haile, Beliyu, Comanescu, Maria, Roberts, Cleophelia, Signorelli, Sara, 2016-06-10 The International Food Policy Research Institute (IFPRI) leads an associated project on Monitoring and Evaluation (M&E) of AR activities. As part of the evaluation efforts of the AR program in three regions of northern Ghana (i.e. Northern, Upper West and Upper East), the M&E Team at IFPRI has contracted Pan African Field Services Limited (Panafields) to conduct the Ghana Africa RISING Evaluation Survey (GARBS), which has the primary objective of collecting highly credible and unbiased baseline data to evaluate the effectiveness of AR's activities. In particular, the main development hypothesis that GARBS aims to test is whether AR interventions, in the form of sustainable intensification of agricultural practices, lead to an increase in agricultural productivity, income and welfare indicators (both monetary as well as non-monetary). The collected evidence on the overall effectiveness and on the specific causal pathways will also allow to draw conclusions on whether and how to scale up the program in the future.

Body-mass Index and Health Ayse Emel Onal, 2019-02-13 The body mass index has an important place in weight control. Attention should be paid to the regularization of anthropometric measures and to physical activity to protect from increasing obesity that is associated with chronic noncommunicable conditions, such as diabetes mellitus, cancers and cardiovascular diseases. Also, attention should be paid to the countries that are developing. **Obesity in Childhood and Adolescence** Wieland Kiess, Claude Marcus, Martin Wabitsch, 2004-01-01 Obesity in childhood and adolescence has reached epidemic proportions in all industrialized countries around the world. Its impact on individual lives as well as on health economics has to be recognized by physicians and the public alike. Among the most common consequences of obesity in the adolescent are hypertension, dyslipidemia, back pain and psychosocial problems. Therapeutic strategies include psychological and family therapy, lifestyle/behavior modification and nutrition education. The role of regular exercise and exercise programs is emphasized. Surgical procedures and drugs used in adult obesity are still not generally recommended for obese adolescents. This book aims to increase physicians knowledge and understanding of obesity in childhood and adolescence as well as to further public awareness of the health burden and economic dimension of obesity at a young age. Several chapters deliver insights into the basic understanding of which factors contribute to or prevent the development of overweight and obesity in young people. Other contributions provide tools for the clinician to manage the care of the child and adolescent with overweight/obesity. In addition, knowledge from the latest scientific studies on the molecular biology of obesity is also presented.

**Women and Health** Marlene B. Goldman, Rebecca Troisi, Kathryn M. Rexrode, 2012-12-31 Women and Health is a comprehensive reference that addresses health issues affecting women of all ages — from adolescence through maturity. It goes far beyond other books on this topic, which concentrate only on reproductive health, and has a truly international perspective. It covers key issues ranging from osteoporosis to breast cancer and other cancers, domestic violence, sexually transmitted diseases, occupational hazards, eating disorders, heart disease and other chronic illnesses, substance abuse, and societal and behavioral influences on health. In this second edition of Women and Health, chapters thoughtfully explore the current state of women's health and health care, including the influences of sex and gender on the occurrence of a wide variety of diseases and conditions. All chapters have been extensively updated and emphasize the epidemiology of the condition — the etiology, occurrence, primary and secondary prevention (screening), risk factors, surveillance, changing trends over time, and critical analysis of the diagnostic and treatment options and controversies. Treatment sections in each chapter have been expanded to create a stronger dialogue between epidemiologists and women's health practitioners. Saves researchers and clinicians time in quickly accessing the very latest details on a broad range of women's health issues, as opposed to searching through thousands of journal articles Provides a common language for epidemiologists, public health practitioners, and women's health specialists to discuss the behavioral, cultural, and biological determinants of women's health Researchers and medical specialists will learn how the gender-specific risks and features of one organ system's diseases affect the health of other organ systems For example: Hormone replacement therapy used to treat imbalance within the endocrine system is also being used to prevent and treat cardiovascular disease; Drugs developed for type 2 diabetes are now being used in chemoprevention Orientates the non-gerontologist about the importance of considering the entire life cycle of women within research designs and treatment plans Professors teaching courses in women's health will use slides and additional materials to structure lectures/courses; students will use slides as a unique resource to study for exams
