An Earthling's Guide to Outer Space Bob McDonald,2019-10-22 Beloved science commentator Bob McDonald takes us on a tour of our galaxy, unraveling the mysteries of the universe and helping us navigate our place among the stars. How big is our galaxy? Is there life on those distant planets? Are we really made of star dust? And where do stars even come from? In An Earthling's Guide to Outer Space, we finally have the answers to all those questions and more. With clarity, wisdom, and a great deal of enthusiasm, McDonald explores the curiosities of the big blue planet we call home as well as our galactic neighbours—from Martian caves to storm clouds on Jupiter to the nebulae at the far end of the universe. So if you're pondering how to become an astronaut, or what dark matter really is, or how an asteroid wiped out the dinosaurs, look no further. Through a captivating mix of stories, experiments, and illustrations, McDonald walks us through space exploration past and present, and reveals what we can look forward to in the future. An Earthling's Guide to Outer Space is sure to satisfy science readers of all ages, and to remind us earthbound terrestrials just how special our place in the universe truly is.

Asteroids Viorel Badescu,2013-07-03 The Earth has limited material and energy resources while these resources in space are virtually unlimited. Further development of humanity will require going beyond our planet and exploring of extraterrestrial resources and sources of unlimited power. Thus far, all missions to asteroids have been motivated by scientific exploration. However, given recent advancements in various space technologies, mining asteroids for resources is becoming ever more feasible. A significant portion of asteroids value is derived from their location; the required resources do not need to be lifted at a great expense from the surface of the Earth. Resources derived from Asteroid not only can be brought back to Earth but could also be used to sustain human exploration of space and permanent settlements in space. This book investigates asteroids' prospective energy and material resources. It is a collection of topics related to asteroid exploration, and utilization. It presents past and future technologies and solutions to old problems that could become reality in our life time. The book therefore is a great source of condensed information for specialists involved in current and impending asteroid-related activities and a good starting point for space researchers, inventors, technologists and potential investors. Written for researchers, engineers, and businessmen interested in asteroids' exploration and exploitation. Keywords: Asteroids, Asteroid exploration, Asteroid exploitation, Energy sources, Space Resources, Material Resources, In-Situ Resource Utilization, Mining

Asteroids Robert Kraske,1998 Heads up! In the tradition of the Aladdin non-tie-in tie-in, here's a book that's right on target for this summer's blockbuster asteroid-theme movies. Age 9 and up.

Naturalism, Realism, and Normativity Hilary Putnam,2016-04-11 Hilary Putnam's writings have shaped fields from epistemology to ethics, metaphysics to the philosophy of physics, the philosophy of mathematics to the philosophy of mind. This volume reflects his latest thinking on how to articulate a theory of naturalism which acknowledges that normative phenomena form an ineluctable part of human experience.

Earth-Shattering Bob Berman,2019-02-19 A heart-pumping exploration of the biggest explosions in history, from the Big Bang to mysterious activity on Earth and everything in between The overwhelming majority of celestial space is inactive and will remain forever unruffled. Similarly, more than 90 percent of the universe's 70 billion trillion suns had non-attention-getting births and are burning through their nuclear fuel in steady, predictable fashion. But when cosmic violence does unfold, it changes the very fabric of the universe, with mega-explosions and ripple effects that reach the near limits of human comprehension. From colliding galaxies to solar storms, and gamma ray bursts to space-and-time-warping upheavals, these moments are rare yet powerful, often unseen but consequentially felt. Likewise, here on Earth, existence as we know it is fragile, always vulnerable to hazards both natural and manufactured. As we've learned from textbooks and witnessed in Hollywood blockbusters, existential threats such as biological disasters, asteroid impacts, and climate upheavals have the all-too-real power to instantaneously transform our routine-centered lives into total chaos, or much worse. While we might be helpless to stop these catastrophes-whether they originate on our own planet or in the farthest reaches of space-the science behind such cataclysmic forces is as fascinating as their results can be devastating. In Earth-Shattering, astronomy writer Bob Berman guides us through an epic, all-inclusive investigation into these instances of violence both mammoth and microscopic. From the sudden creation of dazzling new stars to the furiously explosive birth of our moon, from the uncomfortable truth about ultra-high-energy cosmic rays bombarding us to the incredible ways in which humanity has harnessed cataclysmic energy for its gain, Berman masterfully synthesizes some of our worst fears into an astonishing portrait of the universe that promises to transform the way we look at the world(s) around us. In the spirit of Neil deGrasse Tyson and Carlo Rovelli, what emerges is a rollicking, profound, and even humbling exploration of all the things that can go bump in the night.

Meteor I vs V1 Flying Bomb Donald Nijboer,2012-10-20 A total of 10,500 missiles were launched as part of the V1 attack, of which 3,957 were destroyed by the defences. Indeed, it could have been much worse, for by the end of the war the Germans had manufactured close to 32,000 flying bombs. The defences put forward to guard against the V1 were formidable – 23,000 men and women with their guns, radar and communications networks were installed on coastal sites. Squadrons of Britain's newest Spitfires, the F XIVs, and Hawker Tempest Vs were kept at home to battle the new menace. Rushed into action in July 1944 to help counter the V1 threat, Britain's Gloster Meteor I was the first jet fighter to enter RAF service. On 4 August the Meteor scored its first V1 victory. Having just closed in on a flying bomb, its officer squeezed the trigger but his guns jammed. Using the Meteor's superior speed, he was able to overtake the missile and, using his wing tip, he tipped the craft over and sent it crashing into the ground. The interceptions between the V1 and Britain's Gloster Meteor were historic, and ushered in a new era of aerial combat.

The Pendulum Paradigm Martin Beech,2014 The pendulum is perhaps the simplest experimental devices ever constructed, and yet for all its simplicity it has historically enabled scientists to both investigate and enumerate gravity; the fundamental force that shapes the very universe. The pendulum has also allowed astronomers and geologists to measure the motion, mass and distribution of matter within the Earth, and its stately swing is at the very heartbeat of time. This book explores the many applications of the pendulum, from its employment as a fundamental experimental device, such as in the Cavendish torsion balance for measuring the universal gravitational constant, to its everyday, practical use in geology, astronomy and horology.

Astrosphere Lucsan,2010 A novel by Lucsan Twenty years ago a young David Shawdale realised his boyhood dream when he discovered a new star. Now, an astronomer at a university in England, David is surprised when his star begins to exhibit unusual behaviour. Soon an unidentified object is observed coming from the star and heading towards our sun. American intelligence officer Betty 'Bing' Saunders is charged with the task of discovering the nature of the asteroid as it crosses our solar system. When it violently changes course and comes hurtling towards Earth, plunging humanity into chaos and panic as many believe they face their last days. This fast paced, entertaining and thought provoking story spanning seventy years follows four people who's lives are profoundly changed by the asteroid and the mysteries it contains. When it places powerful artefacts in their hands they are taken on a flight of discovery which ultimately reveals the truth about the nature of their universe.

Under the Meteor Flag Harry Collingwood,2008-11 William Joseph Cosens Lancaster was the son of a Royal Navy captain and educated at the Naval College, Greenwich. Even though he had been at sea since the age of 15, he had to abandon a career in the Royal Navy because of severe myopia which kept him from clearly seeing anything

more than a few hundred yards away. Undaunted, he became a marine engineer specializing in harbor design. He also became one of the most prolific writers of nautical fiction of his day. Between 1886 and 1913 he wrote 23 nautically-related novels under the pseudonym of Harry Collingwood-a name he derived from his hero Admiral Cuthbert Collingwood, Nelson's second in command at Trafalgar. His most commercially successful book was The Pirate Island written in 1884; but Under the Meteor Flag, written the previous year, might be his most action-packed. It is the story of a young midshipman who, like many of Marryat's characters, is trying to make his way in the new and often incomprehensible world of the 18th Century Royal Navy. It is the story of the midshipman that Lancaster never was, but it is written by a man who literally spent his whole life dealing with the sea.
