Emotions and the Body Beatrice de Gelder, 2016 The face has long been considered the gateway to understanding human emotion and cognition. Body language is an equally powerful means of communication, however—and although faces and bodies can express themselves in many similar ways, examining their differences may be the best way to learn how bodies communicate. This book investigates the role that bodies play in the expression and perception of emotions. Using state-of-the-art research in the neuropsychology of emotional face and body disorders, Beatrice de Gelder discusses the neural basis and temporal processing signatures of emotional body language—

The Cricket as a Model Organism Hadley Wilson Horch, Taro Mito, Aleksandar Popadić, Hideyo Ohuchi, Sumihare Noji, 2017-01-09 This book covers a broad range of topics about the cricket from its development, regeneration, physiology, nervous system, and behavior with remarkable recent updates by adapting the new, sophisticated molecular techniques including RNAi and other genome editing methods. It also provides detailed protocols on an array of topics and for basic experiments on the cricket. While the cricket has been one of the best models for neuroethological studies over the past 60 years, it has now become the most important system for studying basal hemimetabolous insects. The studies of *Gryllus* and related species of cricket will yield insight into evolutionary features that are not evident in other insect model systems, which mainly focus on holometabolous insects such as *Drosophila*, *Tribolium*, and *Bombyx*. Research on crickets and grasshoppers will be important for the development of pest-control strategies, given that some of the most notorious pests also belong to the order Orthoptera. At the same time, crickets possess an enormously high "food conversion efficiency", making them a potentially important food source for an ever-expanding human population. This volume provides a comprehensive source of information as well as potential new applications in pest management and food production of the cricket. It will inspire scientists in various disciplines to use the cricket model system to investigate interesting and innovative questions.

Patterns and Processes of Speciation in Ancient Lakes Thomas Wilke, Risto Väinölä, Frank Riedel, 2009-04-02 Ancient lakes are exceptional freshwater environments that have continued to exist for hundreds of thousands of years. They have long been recognized as centres of biodiversity and hotspots of evolution. During recent decades, speciation in ancient lakes has emerged as an important and exciting topic in evolutionary biology. The contributions in this volume deal with patterns and processes of biological diversification in three prominent ancient lake systems. Of these, the famous East African Great Lakes already have a strong tradition of evolutionary studies, but the two other systems have so far received much less attention. The exceptional biodiversity of the European sister lakes Ohrid and Prespa of the Balkans has long been known, but has largely been neglected in the international literature until recently. The rich biota and problems of its evolution in the two central lake systems on the Indonesian island of Sulawesi, in turn, have only lately started to draw scientific attention. This volume aims at deepening the awareness of the unusual biological diversity in ancient lakes in general, and of the role of these lakes as natural laboratories for the study of speciation and diversification in particular. It should stimulate further research that will lead to a better understanding of key evolutionary processes in these lakes, and to knowledge that might help in mitigating the deterioration of their diversity in the future.

The Overly Honest Teacher Meredith Essalat, 2020-10-13 "When a teacher gives anything other than glowing feedback, it's tough to keep from slipping into a defensive stance. Enter *The Overly Honest Teacher*...written by seasoned educator and administrator Meredith Essalat, M.Ed. *The Overly Honest Teacher* is filled with tangible advice from how to best communicate with your children's teachers to how to start your kids' school day off on the right foot." -Amy Lupold Bair, Founder of Resourceful Mommy Media, LLC All parents want their children to have the tools to vocalize their emotions—to own their opinions, their fears, and their views of the world. But parents don't always feel prepared to take on the role of model adult. As both a teacher and a school principal, Meredith Essalat has lived the daily challenges of helping children navigate through their young lives. She has seen the struggles that parents have as they balance long working hours with the demands of home life. She sees that it's the teachers who are often caught in the middle. In an effort to stop pointing out each other's flaws—and instead letting kids know they are supported—Essalat offers hard-won pointers that enable parents, teachers, and students alike to encourage one another with accountability. Combining humor with straightforward, practical advice, *The Overly Honest Teacher*

educates parents on how to embrace everyday parenting gracefully. The results will be well-adjusted, positive, enthusiastic young adults ready to work hard and learn vastly.
