Passport to Peckham Robert Hewison, 2022-04-05 An entertaining and engaging social and cultural history of the London community of Peckham that offers lessons in urban living. "Is there life in Peckham?" asks a pop song of the 1980s. Peckham has been treated as a joke and a place to be avoided. It has been celebrated in television comedies, and denigrated for its levels of crime. It is a center for the arts and the creative industries, yet it also suffers from social deprivation and racial

tension. *Passport to Peckham* is a guide to an unofficial part of London—social and cultural history written from the ground up. In this entertaining and engaging account, Hewison invites readers to explore Peckham's streets and presents the portrait of a community experiencing the stresses of modern living. Old and new residents rub against each other as they try to adjust to the challenges created by urban regeneration and the more subtle process of gentrification. Artists have lived and worked in Peckham for more than a century, and now Caribbean and West African communities are adding their own flavors in terms of music, drama, poetry, and film. Focused on a few square miles, *Passport to Peckham* raises issues of urban policy, planning, culture, and creativity that have a far wider application. As London and other major cities recover from the COVID crisis, are there lessons in urban living to be learned from the pleasures and pains of Peckham? The answer from one of Britain's most distinguished cultural critics is an emphatic yes.

The Visual Neuroscience of Robotic Grasping Eris Chinellato, Angel P. del Pobil, 2015-06-19 This book presents interdisciplinary research that pursues the mutual enrichment of neuroscience and robotics. Building on experimental work, and on the wealth of literature regarding the two cortical pathways of visual processing - the dorsal and ventral streams - we define and implement, computationally and on a real robot, a functional model of the brain areas involved in vision-based grasping actions. Grasping in robotics is largely an unsolved problem, and we show how the bio-inspired approach is successful in dealing with some fundamental issues of the task. Our robotic system can safely perform grasping actions on different unmodeled objects, denoting especially reliable visual and visuomotor skills. The computational model and the robotic experiments help in validating theories on the mechanisms employed by the brain areas more directly involved in grasping actions. This book offers new insights and research hypotheses regarding such

mechanisms, especially for what concerns the interaction between the dorsal and ventral streams. Moreover, it helps in establishing a common research framework for neuroscientists and roboticists regarding research on brain functions.

The SAGE Encyclopedia of Abnormal and Clinical Psychology Amy Wenzel, 2017-03-16 Abnormal and clinical psychology courses are offered in psychology programs at universities worldwide, but the most recent major encyclopedia on the topic was published many years ago. Although general psychology handbooks and encyclopedias include essays on abnormal and clinical psychology, such works do not provide students with an accessible reference for understanding the full scope of the field. The SAGE Encyclopedia of Abnormal and Clinical Psychology, a 7-volume, A-Z work (print and electronic formats), will be such an authoritative work. Its more than 1,400 entries will provide information on fundamental approaches and theories, various mental health disorders, assessment tools and psychotherapeutic interventions, and the social, legal, and cultural frameworks that have contributed to debates in abnormal and clinical psychology. Key features include: 1,400 signed articles contained in 7 volumes and available in choice of print and/or electronic formats Although organized A-to-Z, front matter includes a Reader's Guide grouping related entries thematically Back matter includes a Chronology, Resource Guide, Bibliography, and detailed Index Entries conclude with References/Further Readings and Cross-References to related entries The Index, Reader's Guide themes, and Cross-References between and among entries all combine to provide robust search-and-browse features in the electronic version.

A Unifying Theory of Evolution Generated by Means of Information Modelling J. Brender

McNair,2016-09-13 Stringent ways of thinking, 'conceptual frameworks', are necessary in science. The drawback is that the associated assumptions, concepts, rules and practice may become so deeply entrenched that they turn into tacit knowledge and hence give rise to constraints in scientific thought and practice – that is, a new kind of plethora that seriously blinds and thereby hampers scientific progress. This book, 'A Unifying Theory of Evolution Generated by Means of Information Modelling', presents a methodology for describing complex knowledge domains. It applies a template information model based on a dynamic structure of interrelated functions, called the Mereon Matrix. Application of this template model to the field of evolutionary theories enabled the unification of the sometimes chaotic and competing field of evolutionary theories, large and small, seamlessly in a shared framework. The author has Masters degrees in both biochemistry and computer science, as well as a European Doctorate and PhD in health informatics and has spent 35 years in full-time research. It is her particular combination of professional experience and expertise together with the template information model which has enabled her to write this book. Whilst primarily aimed at a scientific audience, and evolutionary biologists in particular, the book will be of interest to all those looking for new approaches to exploring and explaining phenomena in nature, and because the text is largely non-technical in nature, much of the content will also be accessible to a wider readership.

Bilingual Couples in Conversation Silja Ang-Tschachtli, 2022-01-31 This book provides a detailed linguistic analysis of the communication between highly proficient bilingual couples, each consisting of a native speaker of English and of Swiss German. Combining the accounts of ten couples on their language use with an analysis of their actual linguistic behaviour, several areas of the partners' speech and interaction were closely examined. These include their language choice and language mixing, attitudes, expression of emotions, swearing, as well as their humour and laughter. In addition, the influence of the bilinguals' mother tongue and gender on their language use was explored. Thus, the study provides valuable insights into the language practices of established bilingual couples, while also contributing to the fields of fluent late bilingualism and gender research.

Dialectic of Defeat Russell Jacoby, 2002-05-16 Observing that for both revolutionaries and capitalists, nothing succeeds like success, Russell Jacoby asks us to reexamine a loser of Marxism: the unorthodox Marxism of Western Europe. The author begins with a polemical attack on 'conformist' or orthodox Marxism, in which he includes structuralist schools. He argues that a cult of success and science drained this Marxism of its critical impulse and that the successes of the Russian and Chinese revolutions encouraged a mechanical and fruitless mimicry. He then turns to a Western alternative that neither succumbed to the spell of success nor obliterated the individual in the name of science. In the nineteenth century, this Western Marxism already diverged from Russian

Marxism in its interpretation of Hegel and its evaluation of Engels' orthodox Marxism. The author follows the evolution of this minority tradition and its opposition to authoritarian forms of political theory and practice.

Octopus Afsaneh Gray, 2017-04-28 Set in a world where how British you are is determined by the state, three women have been called in for interview. Sara looks kind of Asian. Scheherazade kind of Middle Eastern. And Sarah is kind of white and has no idea why she's here. She also keeps bursting into song.

Spatial Practices Melanie Dodd, 2019-11-07 This book explores 'spatial practices', a loose and expandable set of approaches that embrace the political and the activist, the performative and the curatorial, the architectural and the urban. Acting upon and engaging with the public realm, the field of spatial practices allows people to reconnect with their own sense of agency through engagement in space and place, exploring and prototyping alternative futures in the here and now. The 24 chapters contain essays, visual essays and interviews, featuring contributions from an international set of experimental practitioners including Jeanne van Heeswijk (Netherlands), Teddy Cruz (Estudio Teddy Cruz + Fonna Forman, San Diego), Hector (USA), The Decorators (London) and OOZE (Netherlands). Beautifully designed with full colour illustrations, *Spatial Practices* advances dialogue and collaboration between academics and practitioners and is essential reading for students, researchers and professionals in architecture, urban planning and urban policy.

Cognition across the psychiatric disorder spectrum: From mental health to clinical

diagnosis Caroline Gurvich, Susan L. Rossell, 2015-08-31 Psychiatric symptoms are considered to be distributed along a continuum, from good mental health to a diagnosable psychiatric disorder. In the case of psychosis, subclinical psychotic experiences, which can include odd behaviors, strange speech, unusual perceptual experiences and social/emotional withdrawal, are often referred to as schizotypy. Research examining schizotypal traits in non-clinical populations is rapidly expanding. The exploration of schizotypy allows us to identify areas of overlap with psychiatric disorders (schizophrenia and related disorders) at genetic, biological, environmental and psychosocial levels, thus identifying putative risk factors, as well as exploring potentially protective factors. Schizotypy is also a valuable model for exploring cognition as performance is not confounded by issues often present in schizophrenia samples, such as long-term antipsychotic medication usage, social isolation, and recurrent hospitalizations. Investigating cognition is a particularly important area of research as cognitive symptoms in schizophrenia, such as impaired attention, reduced memory and difficulties with executive functions, are a core feature of schizophrenia and strongly related to quality of life and functional outcomes, yet generally respond poorly to current treatment options. The aim of this special Research Topic is to explore the relationship between cognition, schizotypy and the schizophrenia spectrum. The articles in this e-book draw on a variety of perspectives and represent an interesting array of opinions, reviews and empirical studies that begin to answer questions about the similarities and overlaps between schizotypy and schizophrenia spectrum disorders, contributing to our understanding of potential risk factors. Equally important is research that highlights differences between schizotypy and schizophrenia spectrum disorders that may enhance our understanding of potentially protective or adaptive features of schizotypy. Collectively, these articles highlight the exploratory potential of the study of schizotypy, particularly in relation to better

understanding cognition across the schizophrenia spectrum.

14. *Triennale Kleinplastik Fellbach* Hannes Böhringer, 2019 In its fourteenth edition the Fellbach Triennial of 2019 forges an unprecedented bridge between contemporary art and the origins of art 40,000 years ago: some of the oldest art known to humanity was found close by, in the Swabian Jura? small sculptures from the Ice Age. Perhaps they were created where they were found, but they could also be relics of early migration. Economy and war, jewelry, folklore and nature, ecology, spirituality and virtual reality or information: the question is what role does art play for humankind and how do artists today derive them from the development of our multipolar world? The intimate relationship between humans and objects, viewers and artworks demands direct attention and is in turn dependent on proportions, scales and dimensions. The project shows more than 150 works by 60 artists from over 40 nations. These are complemented by objects of cultural history.00Exhibition: Triennial For Small Sculpture, Fellbach, Germany (01.06. - 29.09.2019).
