*Japanese Consumer Behaviour* John McCreery,2014-04-08 What role does consumption play in Japanese lives that are more than study, work and shopping? How have those lives changed since World War II as Japan has wrestled with the meaning of white-collar careers, women spreading their wings, changing family values, a shrinking birth rate, an aging population? This book explores Japan through the eyes of Japanese researchers and discovers patterns of change that are both uniquely Japanese and shared by consumers in other advanced industrial nations.

*Problem Solving 4 Today, Grade 2* Carson Delloso Education,2019-01-02 Problem Solving 4 Today: Daily Skill Practice for second grade contains reproducible activities designed to help students learn critical math word problem-solving skills with strategies such as drawing a picture, using a number line, comparing numbers, and more. The 4 Today series offers comprehensive, quick, and easy-to-use math workbooks. The reproducible activities review essential skills during a four-day period. On the fifth day, an assessment with related skills is provided. Each week begins with a Fluency Blast section to provide students with repeated, daily practice for essential skills. The format and style of the 4 Today books provide excellent practice for standardized tests. The series also includes a progress-tracking reproducible, a standards alignment chart, tips for fostering a school-to-home connection, and an answer key.

**Surprising Quantum Bounces** Valery Nesvizhevsky,Alexei Voronin,2015-04-14 This unique book demonstrates the undivided unity and infinite diversity of quantum mechanics using a single phenomenon: quantum bounces of ultra-cold particles. Various examples of such quantum bounces are: gravitational quantum states of ultra-cold neutrons (the first observed quantum states of matter in a gravitational field), the neutron whispering gallery (an observed matter-wave analog of the whispering gallery effect well known in acoustics and for electromagnetic waves), and gravitational and whispering gallery states for anti-matter atoms that remain to be observed. These quantum states are an invaluable tool in the search for additional fundamental short-range forces, for exploring the gravitational interaction and quantum effects of gravity, for probing physics beyond the standard model, and for furthering studies into the foundations of quantum mechanics, quantum optics, and surface science.

*The Constitution of Selves* Marya Schechtman,1996 An amnesia victim asking Who am I? means something different from a confused adolescent asking the same question. Marya Schechtman takes issue with analytic philosophy's emphasis on the first sort of question to the exclusion of the second. The problem of personal identity, she suggests, is usually understood to be a question about historical life. What she calls the reidentification question is taken to be the real metaphysical question of personal identity, whereas questions about beliefs or values and the actions they prompt, the characterization question, are often presented as merely metaphorical. Failure to recognize the philosophical importance of both these questions, Schechtman argues, has undermined analytic philosophy's attempts at offering a satisfying account of personal identity. Considerations related to the characterization question creep unrecognized into discussions of reidentification, with the result that neither question is adequately addressed. Schechtman shows how separating the two questions allows for a more fruitful approach to the reidentification question, and she develops her own narrative account of characterization. She suggests that persons constitute their identities by developing autobiographical narratives that bear the right relation to facts about the environment, the general concept of a person, and other people's concepts of who they are.

**Energy Lab for Kids** Emily Hawbaker,2017-05-01 Energy Lab for Kids offers 40 discovery-filled and thought-provoking energy projects by Emily Hawbaker, a science educator from the NEED (National Energy Education Development) project—with a foreword by Liz Lee Heinecke, author of Kitchen Science Lab for Kids. Using supplies that you can find around the house or in the grocery store, these exciting projects let you observe, explore, discover, and get energized! We hear about energy on the news, we use it every day, and sometimes we're told we have too much of it. But what is energy—potential, kinetic, chemical, radiant, and thermal? The lab activities in this book will let you explore almost everything about energy—what it is, how we find it, how we use it, and how we can save it. Uniting this collection of science experiments for the kitchen, backyard, or classroom is the goal to explore and discover real energy solutions. The chapters cross all categories—from steam, electricity, and chemical reactions, to water, solar, and wind power—allowing kids to compare and test the different sources and to discover their strengths and failings. Why is one source of energy is more efficient for a one situation but not for another? Why might two energy sources combined work better than a single source? Which sources are renewable? Projects are geared to understanding actual issues in the news today. With an emphasis on inventive exploration, you'll discover that creativity leads to breakthroughs. Learn about: chemical, radiant, and thermal energy by activating a glow stick and watching it get brighter in hot water. viscosity by sucking soda and chocolate syrup up an oil pipeline made from straws. solar energy by melting s'mores in a pizza box solar oven. wind power by lifting paperclips with a wind turbine made from a cup, paper, tape, and straw. calories by burning cheese puffs (and other food) in a homemade calorimeter. The popular Lab for Kids series features a growing list of books that share hands-on

activities and projects on a wide host of topics, including art, astronomy, clay, geology, math, and even how to create your own circus—all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Lab for Kids.

**Lessons learned from maths lessons: Things we have learned from watching trainee teachers of secondary mathematics** Joan Stephens,Keith Parramore,2022-09-30 This is a book about teaching mathematics in schools. There are many excellent books about teaching mathematics that are driven by pedagogy, psychology or research. This book is different. It is driven by the mathematics that underpins the school mathematics curriculum, informed by the authors’ experiences and opinions. In the field of pedagogy, there are very few fixed “knowns”. Mathematics, on the other hand, is a well-founded rock. So, the thoughts and advice provided by Keith Parramore and Joan Stephens are anchored to that rock. Lessons Learned from Maths Lessons is based on observations in secondary schools, and many sections are relevant to primary school mathematics. The authors are a husband-and-wife team of practising mathematicians, with a wealth of experience in supporting trainee teachers. They have learned something new and/or interesting from every mathematics lesson they have observed. One objective of this book is to share some of that learning with the reader. A second objective is to promote an approach to teaching mathematics that empowers pupils and promotes understanding. Trainee teachers often identify specific topic areas that they perceive they need to develop. Parramore and Stephens argue that the greater need is for them to develop depth rather than breadth, to truly explore the mathematical foundations of what they are teaching.

*David McWilliams' The Pope's Children* David McWilliams,2005-11-15 Meet The Pope's Children, the beneficiaries of Wonderbra Economics. This is the special generation, the Irish baby boom of the 1970s that peaked nine months to the day after the Pope's visit. There are 620,000 of them, squeezed into the middle and lifted up by the Expectocracy. Ireland is blurring. Out of this haze has come the Full-on Nation, the most hedonistic generation ever. David McWilliams' brilliant research and analysis of Ireland is a celebration of success. In an easy-to-read style, he takes us to Deckland, that suburban state of mind where you will find the Kells Angels, Breakfast Roll Man, Low GI Jane and RoboPaddy. Come face to face with the You're a Star generation, Billy Bunker, fair-trade Frank, Carrot Juice Contrarians and Bouncy Castle Brendan. We also meet the HiCos, Hibernian Cosmopolitans, the new elite whose distance from Deckland is measured by appreciations and cultivations that Deckland's rampant credit just can't buy. Entertaining and informative, The Pope's Children told of the vast surge of ambition, money, optimism and hope in Ireland during the boom.
