Geoinformatics A. Krishna Sinha, 2006-01-01 The science of informatics in the broadest sense has been several thousands of years in the making. With the recent emergence of large storage devices and high-speed processing of data, it has become possible to organize vast amounts of data as digital products with ontologic tags and concepts for smart queries. Coupling this computational capability with earth science data defines the emerging field of geoinformatics. Since the science of geology was established several centuries ago, observations led to conclusions that were integrative in concept and clearly had profound implications for the birth of geology. As disciplinary information about Earth becomes more voluminous, the use of geoinformatics will lead to integrative,

science-based discoveries of new knowledge about planetary systems. Twenty one research papers, co-authored by 96 researchers from both earth and computer sciences, provide the first-ever organized presentation of the science of informatics as it relates to geology. Readers will readily recognize the vast intellectual content represented by these papers as they seek to address the core research goals of geoinformatics.--Publisher's website.

Telesthesis McKenzie Wark, 2012-09-04 The telegraph, telephone, and television, not to mention the Internet and mobile telephony, are all forms of communication that move information faster than the speed at which objects move. Both labor and capital and armies and commodities once moved at the same speed as the information organizing them. Over the last two centuries, social space has developed a strange folded quality, where physical space comes more and more to be doubled by a space of the movement of information. Telesthesis, or perception at a distance, comes increasingly to characterize how we see and hear and know the world. How does the evolution of different communication forms affect how we can perceive and act? How can the underlying infrastructure of communication forms be detected in the events of

everyday life? These are the central questions animating this book. McKenzie Wark first explores relations between metropolitan and peripheral cultures – or postcolonial relations – with close attention to the texture of events that can happen when perception is mediated. He then examines what were once called postmodern experiences, and how relations of communication create new kinds of class relations and experiences of everyday life, from 9/11 to Occupy Wall Street.

A Treasury of Mahāyāna Sūtras Chen-chi Chang,1991 The Maharatnakuta Sutra is one of the five major sutra groups in the Mahayana canon. Of the two great schools of Buddhism, Mahayana has the greatest number of adherents worldwide-it prevails among the Chinese, Japanese, Koreans, Tibetans, and Vietnames-and contains within it a number of movements, notably Zen which have been of growing interest in the West in recent

decades. Yet despite this increased attention and enormous following, translations of Mahayana scriptures have been scarce and fragmentary; clearly, a comprehensive translation of a major work within the canon was called for.
