Earth Sound Earth Signal Douglas Kahn,2013-08-30 Earth Sound Earth Signal is a study of energies in aesthetics and the arts, from the birth of modern communications in the nineteenth century to the global transmissions of the present day. Grounded in the Aeolian sphere music that Henry David Thoreau heard blowing in telegraph lines and in the Aelectrosonic sounds of natural radio that Thomas Watson heard in telephone lines, the book moves through the histories of science, media, music, and the arts to the 1960s, when the composer Alvin Lucier worked with the natural electromagnetic sounds present from brainwaves to outer.

The Best Democracy Money Can Buy Greg Palast,2003-02-25 Palast is astonishing, he gets the real evidence no one else has the guts to dig up. Vincent Bugliosi, author of None Dare Call it Treason and Helter Skelter Award-winning investigative journalist Greg Palast digs deep to unearth the ugly facts that few reporters working anywhere in the world today have the courage or ability to cover. From East Timor to Waco, he has exposed some of the most egregious cases of political corruption, corporate fraud, and

financial manipulation in the US and abroad. His uncanny investigative skills as well as his no-holds-barred style have made him an anathema among magnates on four continents and a living legend among his colleagues and his devoted readership. This exciting collection, now revised and updated, brings together some of Palast's most powerful writing of the past decade. Included here are his celebrated Washington Post exposé on Jeb Bush and Katherine Harris's stealing of the presidential election in Florida, and recent stories on George W. Bush's payoffs to corporate cronies, the payola behind Hillary Clinton, and the faux energy crisis. Also included in this volume are new and previously unpublished material, television transcripts, photographs, and letters.

Rave Culture and Religion Graham St John,2004-06-01 The collection provides insights on developments in post-traditional religiosity (especially 'New Age' and 'Neo-Paganism') through

studies of rave's Gnostic narratives of ascensionism and re-enchantment, explorations of the embodied spirituality and millennialist predispositions of dance culture, and investigations of transnational digital-art countercultures manifesting at geographic locations as diverse as Goa, India, and Nevada's Burning Man festival. Contributors examine raving as a new religious or revitalization movement; a powerful locus of sacrifice and transgression; a lived bodily experience; a practice comparable with world entheogenic rituals; and as evidencing a new Orientalism. *Rave Culture and Religion* will be essential reading for advanced students and academics in the fields of sociology, cultural studies and religious studies.

A Life Decoded J. Craig Venter, 2007-10-18 The triumphant memoir of the man behind one of the greatest feats in scientific history Of all the scientific achievements of the past century, perhaps none can match the deciphering of the human genetic code, both for its technical brilliance and for its implications for our future. In *A Life Decoded*, J. Craig Venter traces his rise from an uninspired student to one of the most fascinating and controversial figures in science today. Here, Venter relates the unparalleled drama of the quest to decode the human genome—a goal he

predicted he could achieve years earlier and more cheaply than the government-sponsored Human Genome Project, and one that he fulfilled in 2001. A thrilling story of detection, *A Life Decoded* is also a revealing, and often troubling, look at how science is practiced today.

Multi-Processor System-on-Chip 1 Liliana Andrade, Frederic Rousseau, 2021-05-11 A Multi-Processor System-on-Chip (MPSoC) is the key component for complex applications. These applications put huge pressure on memory, communication devices and computing units. This book, presented in two volumes – *Architectures and Applications* – therefore celebrates the 20th anniversary of MPSoC, an interdisciplinary forum that focuses on multi-core and multi-processor hardware and software systems. It is this interdisciplinarity which has led to MPSoC bringing together experts in these fields from around the world, over the last two decades. *Multi-Processor System-on-Chip 1* covers the key components of MPSoC: processors, memory, interconnect and interfaces. It describes advance features of these components and technologies to build efficient MPSoC architectures. All the main components are detailed: use of memory and their technology, communication support and consistency, and specific processor

architectures for general purposes or for dedicated applications.

Information Arts Stephen Wilson, 2003-02-28 An introduction to

the work and ideas of artists who use—and even influence—science and technology. A new breed of contemporary artist engages science and technology—not just to adopt the vocabulary and gizmos, but to explore and comment on the content, agendas, and possibilities. Indeed, proposes Stephen Wilson, the role of the artist is not only to interpret and to spread scientific knowledge, but to be an active partner in determining the direction of research. Years ago, C. P. Snow wrote about the two cultures of science and the humanities; these developments may finally help to change the outlook of those who view science and technology as separate from the general culture. In this rich compendium, Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics, the physical sciences, biology, kinetics, telecommunications, and experimental digital systems such as artificial intelligence and ubiquitous computing. In addition to visual documentation and statements by the artists, Wilson examines relevant art-theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future. He also provides lists of resources including organizations, publications, conferences, museums, research centers, and Web sites.

Mega Brain Michael Hutchinson, 1996-09 Scientists have learned more about the brain in the last decade than in all of previous history, and the implications of the latest research are clear: The human brain is far more powerful, and has the potential for immensely greater growth and transformation, than was ever before imagined. These discoveries may constitute the most significant development in learning since the invention of writing. Michael Hutchison captures all the drama, excitement, and adventure as we finally begin to comprehend the most mysterious and complex structure in the universe, the source of human

culture, a still untapped reservoir of power and skills. He looks at the recently developed machines and devices that may soon allow us to increase brain size and intelligence; regenerate brain cells; trigger specific brain states such as euphoria, long- and short-term memory, sexual excitement, and creativity; and control the brain's electrical activity in order to alter such involuntary mechanisms as blood pressure, heart rate, and the secretion of hormones.

Megabrain is a lucid and lively account of where the pioneers in brain research are headed -- and where they are taking us.
