The Breakthrough Challenge John Elkington,Jochen Zeitz,2014-07-22 The world's most forward-looking CEOs recognize the realchallenge facing business today: a fundamental shift in the natureof commerce. While sustainability programs, government action, andnonprofits are all parts of the solution, CEOs and other leadersmust focus on social, environmental, and economic benefit—notonly because it will make the world a better place, but because itwill ensure lasting profitability and success in the businessclimate of tomorrow. The Breakthrough Challenge is both an inspiringcall-to-action and a guide for this transformation, based on thework of The B Team, a major initiative uniting leaders insustainability. As a founding advisor and member of The B Team,John Elkington and Jochen Zeitz map out an agenda for change. Themost important goal for businesses must be redefining the bottomline to account for true long-term costs throughout the supplychain. To achieve this, leaders must rethink everything: whatcounts on balance sheets, how to incentivize performance, who doeswhat in the C-suite, and even what inspires us. The BreakthroughChallenge draws on over 100 exclusive interviews to show thisshift in action, sharing the pioneering work of leaders such asPaul Polman, CEO of Unilever; Arianna Huffington, founder and CEOof The Huffington Post; Peter Brabeck-Letmathe, chairman ofthe Nestlé Group; and Linda Fisher, pioneering ChiefSustainability Officer at DuPont, among many others. Change-as-usual strategies are not enough to move business frombreakdowns to breakthroughs. The Breakthrough Challengeshows leaders how to achieve a true transformation and refocus thedefinition of profitability on the lasting wellbeing of people andplanet—for the lasting success of their business.

Breakthrough Joyce Smith,2017-11-07 The Impossible reveals prayer's immediate and powerful impact through the true account of a family whose son died and was miraculously resurrected. Through the years and the struggles, when life seemed more about hurt and loss than hope and mercy, God was positioning the Smiths for something extraordinary-the death and resurrection of their son. When Joyce Smith's fourteen-year-old son John fell through an icy Missouri lake one winter morning, she and her family had seemingly lost everything. At the hospital, John lay lifeless for more than sixty minutes. But Joyce was not ready to give up on her son. She mustered all her faith and strength into one force and cried out to God in a loud voice to save him. Miraculously, her son's heart immediately started beating again. In the coming days, John would defy every expert, every case history, and every scientific prediction. Sixteen days after falling through the ice and being clinically dead for an hour, he walked out of the hospital under his own power, completely healed. The Impossible is about a profound truth: prayer really does work. God uses it to remind us that He is always with us, and when we combine it with unshakable faith, nothing is impossible.

Reinforced Polymer Composites Victor V. Tcherdyntsev,2021-09-01 This book, consisting of 21 articles, including three review papers, written by research groups of experts in the field, considers recent research on reinforced polymer composites. Most of them relate to the fiber-reinforced polymer composites, which are a real hot topic in the field. Depending on the reinforcing fiber nature, such composites are divided into synthetic and natural fiber-reinforced ones. Synthetic fibers, such as carbon, glass, or basalt, provide more stiffness, while natural fibers, such as jute, flax, bamboo, kenaf, and others, are inexpensive and biodegradable, making them environmentally friendly. To acquire the benefits of design flexibility and recycling possibilities, natural reinforcers can be hybridized with small amounts of synthetic fibers to make them more desirable for technical applications. Elaborated composites have great potential as structural materials in automotive, marine and aerospace application, as fire resistant concrete, in bridge systems, as mechanical gear pair, as biomedical materials for dentistry and orthopedic application and tissue engineering, as well as functional materials such as proton-exchange membranes, biodegradable superabsorbent resins and polymer electrolytes.
