**A Woman's Breast Self-Exam Journal** Susan Mendelsohn,2003

Culled from the latest medical research on breast self-examination, Susan Mendelsohn has created a journal for women that encourages them to practice monthly breast self-examination. She explains the limits of mammography and how it is only a component of a women's breast health practice, especially for younger women. Familiarity with one's body is the most important feature of self-care. Journaling and drawing these monthly self-exams not only invites this health ritual, but leaves a trace of information with one's doctors. The book is concisely informative with an excellent bibliography for women who want to read more on women's breast health. The author writes: Make this journal your own. Just by bringing it home, you are beginning to take your health and the health of your breasts more seriously.

**What Women Need to Know about Breast Self-Examination**

Karen Berger,John Bostwick,1994-07-01 Breast self-examination can save a woman's life. Many women fear finding a breast lump and therefore avoid checking their breasts; this neglect can prove to be dangerous. It may allow cancer to go undetected and spread outside

the local breast tissue, thus lessening a woman's chance of cure and long-term survival. Periodic breast examinations are important to the early detection of breast cancer, which ranks second to lung cancer as the most frequent cause of cancer death in women. Excerpted from *A Woman's Decision*, this booklet is a reliable source of information on breast self-examination that has been reprinted in *Cosmopolitan* magazine. It is popular with doctors and patients alike because of its clear, yet detailed instructions on this vital health examination.

A Breast Cancer Alphabet Madhulika Sikka, 2014-02-25 A definitive and approachable guide to life during, and after, breast

cancer The biggest risk factor for breast cancer is simply being a woman. Madhulika Sikka's *A Breast Cancer Alphabet* offers a new way to live with and plan past the hardest diagnosis that most women will ever receive: a personal, practical, and deeply informative look at the road from diagnosis to treatment and beyond. What Madhulika Sikka didn't foresee when initially diagnosed, and what this book brings to life so vividly, are the unexpected and minute challenges that make navigating the world of breast cancer all the trickier. *A Breast Cancer Alphabet* is an inspired reaction to what started as a personal predicament. This A-Z guide to living with breast cancer goes where so many fear to tread: sex (S is for Sex - really?), sentimentality (J is for Journey - it's a cliché we need to dispense with), hair (H is for Hair - yes, you can make a federal case of it) and work (Q is for Quitting - there'll be days when you feel like it). She draws an easy-to-follow, and quite memorable, map of her travels from breast cancer neophyte to seasoned veteran. As a prominent news executive, Madhulika had access to the most cutting edge data on the disease's reach and impact. At the same time, she craved the community of frank talk and personal insight that we rely on in life's toughest moments. This wonderfully inventive book navigates the world of science and story, bringing readers into Madhulika's mind and experience in a way that demystifies breast cancer and offers new hope for those living with it.

**Screening for Breast Cancer** ,2009 **BACKGROUND:** This systematic review is an update of new evidence since the 2002 U.S. Preventive Services Task Force recommendation on breast cancer screening. **PURPOSE:** To determine the effectiveness of mammography screening in decreasing breast cancer mortality among average-risk women age 40-49 years and 70 years and older; the effectiveness of clinical breast examination (CBE) and breast self examination (BSE) in decreasing breast cancer mortality among women of any age; and harms of screening with mammography, CBE, and BSE. **DATA SOURCES:** The Cochrane Central Register of Controlled Trials and Cochrane Database of Systematic Reviews (through the fourth quarter of 2008), MEDLINE(r) searches (January 2001 to December 2008), reference lists, and Web of Science(r) searches for published studies and Breast Cancer Surveillance Consortium for screening mammography data. **STUDY SELECTION:** Randomized, controlled trials with breast cancer mortality outcomes for screening effectiveness, and studies of various designs and multiple data sources for harms. **DATA EXTRACTION:** Relevant data were abstracted, and study quality was rated by using established criteria. **DATA SYNTHESIS:** Mammography screening reduces breast cancer mortality by 15% for women age 39-49 (relative risk [RR] 0.85; 95% credible interval [CrI], 0.75-0.96; 8 trials). Results are similar to those for women age 50-59 years (RR 0.86; 95% CrI, 0.75-0.99; 6 trials), but effects are less than for women age 60-69 years (RR 0.68; 95% CrI, 0.54-0.87; 2 trials). Data are lacking for women age 70 years and older. Radiation exposure from mammography is low. Patient adverse experiences are common and transient and do not affect screening

practices. Estimates of overdiagnosis vary from 1-10%. Younger women have more false-positive mammography results and additional imaging but fewer biopsies than older women. Trials of CBE are ongoing; trials of BSE showed no reductions in mortality but increases in benign biopsy results. LIMITATIONS: Studies of older women, digital mammography, and magnetic resonance imaging are lacking. CONCLUSIONS: Mammography screening reduces breast cancer mortality for women age 39-69 years; data are insufficient for women age 70 years and older. False-positive mammography results and additional imaging are common. No benefit has been shown for CBE or BSE.

#### Guidelines for the Early Detection and Screening of Breast Cancer

Oussama M. N. Khatib, Atord Modjtabai, 2006-01-01 Breast cancer is a major killer of women both globally and regionally. Studies have shown that most patients with breast cancer in the Eastern Mediterranean Region present for the first time at stages two and three, indicating the need for increased community awareness and early detection of the disease. Well conceived and well managed national cancer control programmes are able to lower cancer incidence and improve the lives of people living with cancer. These evidence-based guidelines have been designed to support Ministries of Health in their policy-setting for early detection and screening of breast cancer, as well as to assist health care providers and patients in decision-making in the most commonly encountered situations.

**Breast Cancer Awareness and Breast Self-Examination in Northern Cyprus** Nalan Linda Fraim, 2010-04 When examining breast cancer, the majority of the literature primarily focuses on adults over the age of 40. Not much information is available on young adults in terms of their beliefs, knowledge, and perceptions of breast cancer or

breast self- examination practices. Although the bulk of research focuses on the Western world, again, there is a large information gap in the Mediterranean and the Middle East. With this research, the primary goal was to establish a baseline of where young adults, under the age of 35, actually stood within this context. As no other study has even been conducted in this field in the Turkish Republic of Northern Cyprus (TRNC), the findings from this study are somewhat alarming. Although young adults are aware of what breast cancer is, it appears that they lack the initiative to engage in health protective or early detection practices. While 47% of the participants indicated that they never engaged in BSE practices, only 18% indicated that they practised BSE on a monthly basis. These findings raise serious questions regarding the existing health policy and public health initiatives in the TRNC.
