Fertility Transition in South India Christophe Z Guilmoto,S Irudaya Rajan,2005 This volume brings together 13 well-researched and original essays which describe and analyse the trajectory of fertility decline in the south Indian states of Tamil Nadu, Karnataka, Andhra Pradesh and Kerala. Documenting the fact that the fertility decline occurred in regions with vast differences in development indicators, the contributors argue that this transition must be understood as a cumulative result of several factors including family planning policies, socio-economic transformation, and changes in social perceptions towards fertility, contraception, marriage, family and child rearing. Combining various qualitative and quantitative techniques with field studies and historical analysis, the contributors go beyond the formal tools of demography and develop an original Geographical Information System (GIS), a spatialized database encompassing south Indian districts.
