**Bus Services Across the UK** Great Britain: Parliament: House of Commons: Transport Committee, 2006-10-26 Buses are a key local service, but usage has been in decline since the 1950s. The Transport Act 1985 introduced deregulation, but that has failed to reverse that decline. The report examines the particular problems local authorities face in developing and implementing effective bus strategies. It is clear to the Committee that, for many areas, including all major metropolitan areas outside London, the current regime is not working. The Committee recommends more flexibility, and is particularly attracted by Quality Contracts. These would replace open competition with a licensed regime. Operators bid for exclusive rights to run bus services on a route or group of routes, on the basis of a local authority service specification. Independent Traffic Commissioners are another development that the Committee welcomes, and would like to see them have a higher profile and more resources and powers, especially to enforce Quality Contracts and penalise operators who do not meet their obligations. Other areas covered in the report are: securing socially necessary services outside the PTAs; congestion and bus priority; concessionary fares; and the image of the bus.

**Strategies for Improved Traveler Information** , 2003 Provides a useful summary of the state of the practice in the area of improved transit traveler information. The result identifies transit traveler information needs, assesses the state of the art in providing transit traveler information, provides examples of customer information systems from both inside the transit industry and related industries, discusses transit traveler information as part of larger community information systems, and offers new directions for the transit industry in providing traveler information.

Transport and accessibility to public services Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2013-06-24 This report looks at progress on improving accessibility since 2003 and ways of improving accessibility. Problems with transport provision and the location of services can reinforce social exclusion by preventing people from accessing key local services and undermines government policies to tackle worklessness, increase participation in education, reduce crime and narrow health inequalities. Insufficient progress has been made since the 2003 Social Exclusion Unit's Making the Connections report, many findings of which are relevant today. There is evidence that accessibility is worsening, driven by tight budgets in central and local government. Accessibility statistics show travel times to key services steadily increasing over time, particularly for access to hospitals. The Department for Transport needs to focus more closely on improving accessibility as well as on supporting the economy. Existing transport funding could be better coordinated and directed to 'accessibility'-focused initiatives, which will have a swifter impact on people's well-being than large infrastructure projects. The social value of transport and accessibility needs to be explicitly considered in policy-making and in the planning system and should no longer be seen as a second-order criterion. The Committee believes it will take time for any improvements to make a noticeable difference. Their recommendations focus on improving how government operates rather than funding. Central government cannot abdicate

its role in coordinating action across departmental silos and helping local authorities and service providers to share best practice. Accessibility planning, introduced by Making the Connections, has had limited success and needs to be re-energised.

*Rail Operations Viewed From South Devon* Garth Pedler,2017-07-04 South Devon, a thriving county with the sea, estuary and moorland for recreation, owes much of its success and vibrant economy to the railways that provide day return services, allowing people to travel freely to and from London and the North. *Rail Operations Viewed From South Devon* is a comprehensive exploration of the railways in and around South Devon, with chapters drawing on areas across the country such as Totnes, Carlisle and Bristol. Embracing a wide range of topics to help the reader understand how railway engineering reached its current state, this book aims to encourage discussion about the rail network as an entity. Chapters include the history of the sea and cliff issues associated with Dawlish, as well as how the Victorians built a congestion-free rail system around Bristol, with another chapter detailing the Cross Country timetables of 1925. This extensive insight into the railway also draws on the author's personal experience of undertaking a rail tour to Carlisle and back to Totnes in 1999, following the re-privatisation of the rail network, in comparison to a previous excursion in 1961. Illustrated throughout with dozens of detailed maps and diagrams, as well as useful statistics, *Rail Operations Viewed From South Devon* will appeal to readers who are curious about railway history and the recent management of the rail networks.

**Transport Economics** K. Button, 2010-01-01 'In the 3rd edition of Transport Economics Button draws together the burgeoning literature in transportation economics. It is a comprehensive standalone text covering all aspects of the field including new sections on logistics and congestion pricing. It should be required reading for every student of transportation and on the library shelf of all transportation researchers and practitioners, an excellent book.' David Gillen, University of British Columbia, Canada Acclaim for the second edition: 'To the literature in the field of transport economics, this is a most welcome addition. Primarily a textbook on theory, it also contains many references to applied studies. . . The book is written in a lucid style and consequently is easy to read and understand.' J.P. Hanlon, Transport 'It is admirably structured, with an introductory chapter placing transport in its economic context and relating transport and location economics.' Urban Studies 'This book is written in a clear, easy to understand style. It is essential reading for those studying for the Institute's Transport Economics examination as well as for undergraduate and postgraduate students of the subject. . . The book offers good value for money and is strongly recommended to anyone with an interest in transport economics.' M.R. Cairns, Transport ' . . . this book does read very much like a textbook; it explains economic concepts clearly, often in both words and mathematical equations, and identifies their relevance in the transport field. . . Transport Economics does provide a good basis with which to understand most of the issues behind what is one of the fastest moving areas of environmental activity in an area where most books will be out of date almost as soon as they are written anyway.' Marcus Enoch, Environmental Politics Transport Economics is a thoroughly revised edition of a well-established textbook which applies economic analysis to transport issues. Each chapter has been carefully reworked and includes new material dealing with the regulation of transport markets. The theoretical content is supported with considerable empirical evidence drawn from a wide range of international sources. Although aimed primarily at university students, this volume is accessible to non-specialists who have an interest in transport economics. It has no modal bias but rather examines in general terms the many aspects of the demand for, and supply of, transport together with the various methods of government intervention needed to ensure that social and environmental criteria are attained. This successful and widely adopted textbook has been meticulously revised and updated for the third edition. As the best intermediate text currently available, it will be welcomed by students, policymakers and all those concerned with the supply of transport services.
