Options for Transition of Land Towards Intensive and Sustainable Agricultural Systems Rocio Millán,Peter Schröder,Arne Sæbø,2019-08-02 Climate and environment of Gaia, mother Earth, are under multiple significant stresses. The increase in world population demands large increases in food production, but this must be reached by use of sustainable methods. Emission of climate gasses needs to be dramatically decreased, overall ecological footprints have to be diminished, and socioeconomy of rural areas has to be boosted. These aims are not easy to combine. However, the bio-economy and green solutions may provide mankind with tools of great value both to mitigate pollution and climate change and to adapt to future changes. It is clear that all forms of agriculture cause changes in balances and fluxes of pre-existing ecosystems, thereby limiting resiliency functions. Intensive agriculture in regions that are influenced by industrial pollution, with strong reduction of landscape structures and vast decoupling of energy and matter cycles, has caused stress and degradation of the production base; massive influence has also been exerted on neighbouring compartments. Average yields are probably close to 50 % of maximum yield many places, due to mismanagement of the crops during the production phase, or due to the inappropriate use of key resources. This relationship often leads to a mis-match between input of resources and process outputs, and creates pollution and unbalance in the landscape. Fertilizer runoff and salt accumulation occurs if water supply is in surplus or deficiency, due to soil compaction after use of large machines, and pollinating insects are suffering in regions with large monocultures and high pesticide inputs. These few examples show some of the dilemmas of using input factors in a way that does not fit with the overall conditions. Hence it will be as important as ever to develop new agricultural systems exploiting seasonal growth cycles through intercropping and the integration of mixed perennial crops to ensure permanent availability of plant fractions to be delivered to end users. The problem of degrading soils threatened by overuse, compaction, pollution and loss of biology can only be tackled by a cross disciplinary research approach addressing the entire spectrum of agricultural, environmental and socioeconomic functions of our agricultural systems. While efforts to demonstrate the benefit of site-specific management are relatively recent and have taken various approaches, they specifically refer to variable-rate applications of single inputs, e.g. seeds, fertilizers, chemicals. It is high time to deploy principles of precision agriculture for integrated crop management through combined variable inputs of irrigation water, fertilizers, composts and crop density to improve degrading land and on the other side produce valuable raw products for biorefineries and biobased industries In order to implement such novel production systems, for food and non-food products, the demonstration of land use changes, for biodiversity, for sufficient food and biomass production is essential, with emphasis on the diversity of species and varieties grown, harvested and converted to valuable products. Therefore this Research Topic combines studies demonstrating improved use of soil amendments, nutrients, as well as improved soil fertility for higher resilience against climate stress and recuperation of abandoned or contaminated soils for cropping and animal husbandry. Mixed cropping for high biomass production to create higher added value through the production and transformation of green biomass into novel products is presented as one of the solutions. Applied research for a sustainable and ecologically compatible land use aimed at sufficient food production is as important as ever. Adequate management plans have to be developed from modeling and implemented to increase soil life at the level of the local farm and the region. Growing biomass plants for biorefinery processes should lower production costs, avoid pollution of surface and groundwater, reduce pesticide residues, reduce a farmer's overall risk, and increase both short- and long-term farm profitability. Such production systems are established amongst the authors of this Research Topic and will allow to obtain an integrated picture of the role of closed cycling loops for N, P and K, and water in an agricultural ecosystem. The next step will be to support decision-making using sustainability indicators and toolboxes as they have been developed for different agricultural systems. The availability of stable research networks of study sites across Europe will help to develop decision support systems applicable across a variety of domains for integrated food and non-food production in the EU, in regards to socio-economy, sustainability and ecology.

Hallo Spaceboy Dave Thompson,2006-06-09 By 1987, David Bowie was at a creative, critical, and commercial low. His most recent album was dismissed by the music press, his latest tour written off as a disaster. Fifteen years after becoming the most colourfully controversial superstar in recent rock history, Bowie was seen as a spent force. Almost twenty years later, Bowie has re-established himself at the very peak of his profession in one of the most extraordinary comebacks in rock history. His 1995 release of the critically-astonishing 1:Outside album has been followed by equally groundbreaking efforts. He is a content family man, married to super-model Iman, and one of the richest musicians in the world. While most biographies on Bowie still focus on his early years, Hallo Spaceboy: The Rebirth of David Bowie is the first to chronicle the comeback in detail. Drawing upon exclusive interviews with fans, colleagues and associates, it is also the long-gestating follow-up to Dave Thompson's Moonage Daydream (1987), widely hailed among the best David Bowie biographies.

Money Games David M Carter,2010-11-09 "A compelling perspective on the evolution of sports business . . . provides an excellent roadmap to maximizing the benefits and minimizing the pitfalls." —David Stern, NBA Commissioner The businesses behind Dubai Sports City, the branding of David Beckham, and the popularity of fantasy sports leagues are unmistakable indicators that the sports and the entertainment industries are quickly becoming one and the same. This rapid convergence has been key to the sports business industry's continued growth and financial success. Money Games not only analyzes how industry stakeholders have monetized this convergence, but also answers this core question: how can the sports business continue to profit from the blurring of sports and entertainment? Author David M. Carter considers a wide array of implications for television content, video gaming, athlete branding, the Internet, mobile technology, gambling, sports-anchored real estate development, venue technology, and corporate marketing—in short, those areas where business opportunities exist now that sports and entertainment have become one. "Fans, sports and media executives, and even investors will find that Carter's examination . . . of the changing landscape of sports and entertainment helps them understand their own experiences." —Stephen A. Greyser, Harvard Business School "An invaluable resource for stakeholders hoping to monetize sports as entertainment." —Kenneth L. Shropshire, Wharton School of the University of Pennsylvania and author of The Business of Sports Agents "The strategies and tactics that all the players will want—from the boardroom to the locker room—can be found in Money Games." —John Nendick, Ernst & Young Global Media & Entertainment Industry Leader "Identifies the challenges facing the various sports leagues in delivering fans what they want." —Allan H. (Bud) Selig, Baseball Commissioner

Jim Taylor's Memoirs of the 28th Battalion Timothy E Taylor,2022-10-26 Jim Taylor's Memoirs of the 28th Battalion: An American Korean Campaign By: Timothy E Taylor As a Black man in twentieth-century America, Jim Taylor faced racial divides his entire life, but he loved his life nevertheless. Serving in the US Army during the Korean Campaign, Jim was assigned to a segregated regiment of Black men with White officers in command. Just like any other soldier, Jim witnessed the deaths of young men who will not be forgotten. In that campaign, he also witnessed the propaganda which hurt the people trying to love their home, the USA. A proud American, Jim shared many stories of perseverance and patriotism with his family, and those experiences are recounted here.
