Spearhead of Logistics Benjamin King, Richard C. Biggs, 2016-02-25 Spearhead of Logistics is a narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.

Discovery and Innovation Donna Fossum, 2000 This report, based largely on the RaDiUS database developed by RAND, allows policymakers and the public for the first time to break down the complex federal R&D portfolio into its component state and local elements. It details the full range of federal R&D activities in terms of the individual laboratories, centers, universities, and companies performing the research, doing the studies, and conducting the analyses. It reveals that virtually every community in the nation has a direct stake in the federal R&D enterprise.--BOOK JACKET.

Bastard Culture! Mirko Tobias Schäfer, 2011 The computer and particularly the Internet have been represented as enabling technologies, turning consumers into users and users into producers. The unfolding online cultural production by users has been framed enthusiastically as participatory culture. But while many studies of user activities and the use of the Internet tend to romanticize emerging media practices, this book steps beyond the usual framework and analyzes user participation in the context of accompanying popular and scholarly discourse, as well as the material aspects of design, and their relation to the practices of design and appropriation.

Désiré Collen - Biotech Pioneer Paul Huybrechts,Frieda Van Wijck,2020-08-27 Désiré Collen, Biotech Pioneer relates the fascinating story of scientific discovery in a time when biotechnology was not yet a science. Although the cultivation and cross fertilization of plants were, strictly speaking, biotechnological techniques, modern biotechnology dates from the early 1970s, when pioneers such as biochemist Herbert Boyer from the university of California managed to transfer genetic material into a bacterium. Together with venture capitalist Robert Swanson, Boyer set up Genentech, one of the first genetic engineering companies. Just a few years later, on the other side of the Atlantic, in Leuven, Désiré Collen discovered t-PA, the enzyme responsible for fibrinolysis, or the dissolving of blood clots. Clogged arteries were then still one of the major causes of death. The ensuing cooperation between Collen and Genentech was the beginning of a long-lasting success story, from which not only Collen but also scientific research and the University of Leuven benefitted greatly for many years. According to a Reuters ranking, KU Leuven has been, from 2016 onwards, the most innovative university in Europe. Flanders and Belgium served as the cradle of several highly successful biotech companies. t-PA was a relatively expensive medicine, and Collen went on to develop a much cheaper clot-dissolving remedy to benefit patients in less affluent countries. He failed, however, to find the necessary finances for Phase 3 trials. Meanwhile, he had set up ThromboGenics, a company which later specialized in ophthalmology. Collen continued to stimulate and finance research in other fields, such as the cardiovascular research of Peter Carmeliet. In 2013 he left ThromboGenics, following a difference in views on the company's focus, and in 2015 he set up Fund+, a biotech-oriented investment firm. Fund+ has meanwhile acquired a prominent place among European biotech investment funds and has scored some astonishing early successes. In June 2020, Fund+ had 13 companies in its portfolio, with several more waiting to come on board.

Food Safety Culture Frank Yiannas,2008-12-10 Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspection approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

Urban Regeneration Antoni Remesar,1997

Networks and Netwars John Arquilla,David Ronfeldt,2001-11-05 Netwar-like cyberwar-describes a new spectrum of conflict that is emerging in the wake of the information revolution. Netwar includes conflicts waged, on the one hand, by terrorists, criminals, gangs, and ethnic extremists; and by civil-society activists (such as cyber activists or WTO protestors) on the other. What distinguishes netwar is the networked organizational structure of its practitioners-with many groups actually being leaderless-and their quickness in coming together in swarming attacks. To confront this new type of conflict, it is crucial for governments, military, and law enforcement to begin networking themselves.
