An Investigation into Authentication Security of GSM algorithm for Mobile Banking Ali Raheem, 2014-02-01 Due to the mobility of its users, GSM systems are vulnerable to an unauthorized access and eaves droppings when compared with the traditional fixed wired networks. The main idea of this project is to develop an application device in order to secure mobile banking over unsecure GSM network. It is important to mention that mobile banking is a term that is used for performing balance checks, account transactions, payments, credit applications, and many other online applications. Unfortunately, the security architecture for cellular network is not entirely secure. As a matter of fact, GSM network infrastructure is proved to be insecure. Many possible attacks are documented in literature. For security was never considered in the initial stages, the sending of protective banking information across an open mobile phone network remains insecure. Consequently, this project focuses entirely on the development and design of security techniques in order to asses some security issues within mobile banking through cellular phone network (GSM). The main aim of this project is to investigate and examine the following: 1. Security issues in each level of the mobile network architecture. 2. Messages and signals exchanged between user's cellular phone and mobile network at each level. 3. The overall security architecture of GSM flaws. 4. Some existing security

measures for mobile transactions. 5. The current security within SMS banking and GPRS banking. Finally, two folded simulations in MATLABT were performed using OFDM which is a broadband multicarrier modulation method that provides a high performance operation to transmitted and received data or information.

Marketing and Mobile Financial Services Aijaz A. Shaikh,Heikki Karjaluo,2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

Islamism and Globalisation in Jordan Daniel Atzori,2015-05-22 This book explores the activities of the local Muslim Brotherhood in Jordan. It

examines how the Brotherhood, working to establish an alternative social, political and moral order through a network of Islamic institutions, made a huge contribution to the transformation of Jordanian society. It reveals, however, that the Brotherhood's involvement in the economic realm, in Islamic financial activities, led it to engage with the neo-liberal approach to the economy, with the result that the Islamic social institutions created by the Brotherhood, such as charities, lost their importance in favour of profit-oriented activities owned by leading Islamist individuals. The book thereby demonstrates the hybridisation of Islamism, and argues that Islamism is not an abstract set of beliefs, but rather a collection of historically constructed practices. The book also illustrates how globalisation is profoundly influencing culture and society in the Arab world, though modified by the adoption of an Islamic framework.
