Study on Data Placement Strategies in Distributed RDF Stores D.D. Janke,2020-03-18 The distributed setting of RDF stores in the cloud poses many challenges, including how to optimize data placement on the compute nodes to improve query performance. In this book, a novel benchmarking methodology is developed for data placement strategies; one that overcomes these limitations by using a data-placement-strategy-independent distributed RDF store to analyze the effect of the data placement strategies on query performance. Frequently used data placement strategies have been evaluated, and this evaluation challenges the commonly held belief that data placement strategies which emphasize local computation lead to faster query executions. Indeed, results indicate that queries with a high workload can be executed faster on hash-based data placement strategies than on, for example, minimal edge-cut covers. The analysis of additional measurements indicates that vertical parallelization (i.e., a well-distributed workload) may be more important than horizontal

containment (i.e., minimal data transport) for efficient query processing. Two such data placement strategies are proposed: the first, found in the literature, is entitled overpartitioned minimal edge-cut cover, and the second is the newly developed molecule hash cover. Evaluation revealed a balanced query workload and a high horizontal containment, which lead to a high vertical parallelization. As a result, these strategies demonstrated better query performance than other frequently used data placement strategies. The book also tests the hypothesis that collocating small connected triple sets on the same compute node while balancing the amount of triples stored on the different compute nodes leads to a high vertical parallelization.

Blockchain Technology for Managers Gerald R. Gray,2021-12-02 Blockchain is a technology that tends to be misunderstood by managers that need to make technology acquisition decisions. This book will provide readers with a basic understanding of blockchain and distributed ledger technology (DLT), the technologies that underpin it, and the technologies DLT is built upon. The book is purposefully not a book on how to code or explore other technical aspects of blockchain (other than

the fundamentals). Rather, it provides managers with the basic understanding of the architectures and consensus algorithms, how they work, the design trade-offs of each architecture type, and what problems and use cases the core characteristics of DLT are best suited to solve ⎕ providing business managers with the core information they need to ask the right questions of vendors when making business value assessments and acquisition decisions.

Dabei wird unter anderem der Frage nachgegangen, welche Veränderungen und Gefahren mit der Digitalisierung einhergehen. In einem dritten Teil wird der Handlungsrahmen sowie die Handlungsmöglichkeiten für die öffentliche Verwaltung abgesteckt. In diesem Zusammenhang werden die rechtlichen Rahmenbedingungen und Zertifizierungsmöglichkeiten (IT-Sicherheitsgesetz, BSI-Grundschutz usw.), Präventionsmaßnahmen sowie Beispiele im Sinne von Best Practice (Kommunale IT-Sicherheitsstrategien) betrachtet. In dem abschließenden vierten Teil wird mit den Themen Blockchain-Technologie und Cybercrime-Versicherung ein Ausblick auf

Innovationen zur Begegnung von Cyberangriffen gegeben. Farmers' Cooperatives and Sustainable Food Systems in Europe Raquel Ajates Gonzalez,2018-06-13 Farmers' cooperatives are very prevalent in the European Union, where they account for approximately half of agricultural trade and thus are key to articulating rural realities and in

shaping the sustainability credentials of European food and farming. This book analyses to what extent farmers' cooperatives are working to benefit their members, are showing concern for their communities and are promoting cooperative economies. It offers a multilevel set of theoretical, disciplinary, methodological, empirical and social perspectives, using the UK and Spain as contrasting examples, and analyses whether agricultural cooperatives contribute to achieving sustainable food systems. The book presents empirical data from diverse and rich case studies, from large, international cooperatives, to small, multi-stakeholder initiatives. This provides an alternative viewpoint to that of economics, which tends to dominate the study of agricultural cooperatives. The author presents a new theoretical framework that provides a novel lens to study farmers' cooperatives as organisations deeply embedded in power dynamics of the food system and agricultural policy that shape and constraint their potential to adopt cooperative and sustainable practices. The book is a major addition to the study of agricultural cooperatives and their impact in the development of fairer and more sustainable food systems and it is one of the first detailed accounts of multi-stakeholder food and farming cooperatives

in Europe. It is a valuable resource for all scholars working on cooperatives, as well as for students studying agricultural and food policy, environmental justice and rural sociology.

  Graph Data Management George Fletcher,Jan Hidders,Josep Lluís Larriba-Pey,2018-10-31 This book presents a comprehensive overview of fundamental issues and recent advances in graph data management. The book will help researchers put their work in perspective and show them which types of tools, techniques and technologies are available, which ones could best suit their needs, and where there are still open issues and future research directions. The chapters are contributed by leading experts in the relevant areas, presenting a coherent overview of the state of the art in the field. Readers should have a basic knowledge of data management

techniques as they are taught in computer science MSc programs.

Imposing Standards Martin Hearson,2021-06-15 In Imposing Standards, Martin Hearson shifts the focus of political rhetoric regarding international tax rules from tax havens and the Global North to the damaging impact of this regime on the Global South. Even when not exploited by tax dodgers, international tax standards place severe limits on the ability of developing countries to tax businesses, denying the Global South access to much-needed revenue. The international rules that allow tax avoidance by multinational corporations have dominated political debate about international tax in the United States and Europe, especially since the global financial crisis of 2007–2008. Hearson asks how developing countries willingly gave up their right to tax foreign companies, charting their assimilation into an OECD-led regime from the days of early independence to the present day. Based on interviews with treaty negotiators, policymakers and lobbyists, as well as observation at intergovernmental meetings, archival research, and fieldwork in Africa and Asia, Imposing Standards shows that capacity constraints and imperfect negotiation strategies in developing countries were exploited by capital-

exporting states, shielding multinationals from taxation and depriving nations in the Global South of revenue they both need and deserve. Thanks to generous funding from the Gates Foundation, the ebook editions of this book are available as Open Access volumes from Cornell Open (cornellpress.cornell.edu/cornell-open) and other repositories.
