How to Make Resin Jewellery Sara Naumann, 2017-02-01 Resin jewellery first started in the US around 6 years ago and has now become one of the fastest-growing trends in jewellery making. The technique is very simple - you simply mix the two-part resin together and pour into a bezel or pendant. Rings, pendants, brooches, cufflinks, hairpins and bracelets are all easy to make and look incredibly professional when done. In this inspiring book, well-known crafter Sara Naumann shows you just how easy and quick resin jewellery is to make, using minimal equipment and readily available products, and provides over 50 fabulous projects for you to try. You can add numerous items to the resin to achieve different effects. You can place paper in the bezels to act as a background to the resin - such as old book paper, map paper, scrapbook paper and photographs.

Paper can also be painted, stencilled, or layered with washi tape before being coated with resin. Try sheet music for a vintage vibe, or origami papers for a fresh, contemporary look. In addition, you can also immerse various items in the resin before it cures, such as dried flowers and leaves, feathers, shells, beads and charms, or try adding glitter, coloured inks, nail polish and virtually anything else you can think of. The versatility of resin jewellery is awe-inspiring, providing papercrafters as well as jewellery-makers with all the skills and inspiration they need to design and make their own stunning pieces.

Conceptual Information Retrieval Michael L. Mauldin, 2012-12-06 The information revolution is upon us. Whereas the industrial revolution heralded the systematic augmentation of human physical limitations by harnessing external energy sources, the information revolution strives to augment human memory and mental processing limitations by harnessing external computational resources. Computers can accumulate, transmit and output much more information and in a more timely fashion than more conventional printed or spoken media. Of greater interest, however, is the computer's ability to process, classify and retrieve information selectively in response to the needs of each human user. One cannot drink from the fire hydrant of information without being immediately flooded with irrelevant text. Recent technological advances such as optical character readers only exacerbate the problem by increasing the volume of electronic text. Just as steam and internal combustion engines brought powerful energy sources under control to yield useful work in the industrial revolution, so must we build computational engines that control and apply the vast information sources that they may yield useful knowledge. Information science is the study of systematic means to control, classify, process and retrieve vast amounts of information in electronic

fonn. In par ticular, several methodologies have been developed to classify texts manually by annies of human indexers, as illustrated quite clearly at the National Library ofMedicine, and many computational techniques have been developed to search textual data bases automatically, such as full-text keyword searches. In general.
