The Carbon Bubble Jeff Rubin,2016-05-17 As the price of oil falls, bestselling author and economist Jeff Rubin takes us to the epicentre of the bursting global carbon bubble, and dares us to imagine a new engine for growth that does not run on oil. For a decade, the vision of Canada's future as an energy superpower has driven the country's political agenda, as well as the fast-paced development of Alberta's oil sands and the push for more pipelines like Keystone XL across the continent to bring that bitumen to market. Anyone who objects to pipelines and tanker-train traffic, north or south of the US border, is labeled a dreamer, or worse—an environmentalist: someone who puts the health of the planet ahead of the economic survival of their neighbours. In *The Carbon Bubble*, Jeff Rubin compellingly shows how an economic vision that rests on oil is dead wrong. Changes in energy markets in the US—where domestic production is booming while demand for oil is shrinking—are quickly turning the oil dream into an economic nightmare. Like U.S. coal stocks, the share values of oil-sands producers have been drastically reduced by falling fuel prices and are increasingly exposed to the world's efforts to reduce carbon emissions. Rubin argues that there is a lifeline to a better future. The very climate change that will leave much of the country's carbon unburnable could at the same time make some of Canada's other resource assets more valuable: its water and its land. In tomorrow's economy, he argues, Canada won't be an energy superpower, but it has the makings of one of the world's great breadbaskets, as everything from the corn belt to viniculture heads to higher latitudes. And in the global climate that the world's carbon emissions are inexorably creating, growing food will soon be a lot more valuable than mining bitumen.

Asset Bubbles Bradley Jones,2015-02-11 In distilling a vast literature spanning the rational—irrational divide, this paper offers reflections on why asset bubbles continue to threaten economic stability despite financial markets becoming more informationally-efficient, more complete, and more heavily influenced by sophisticated (i.e. presumably rational) institutional investors. Candidate explanations for bubble persistence—such as limits to learning, frictional limits to arbitrage, and behavioral errors—seem unsatisfactory as they are inconsistent with the aforementioned trends impacting global capital markets. In lieu of the short-term nature of the asset owner—manager relationship, and the momentum bias inherent in financial benchmarks, I argue that the business risk of asset managers acts as strong motivation for institutional herding and 'rational bubble-riding.' Two key policy implications follow. First, procyclicality could intensify as institutional assets under management continue to grow. Second, remedial policies should extend beyond the standard suite of macroprudential and monetary measures to include time-invariant policies targeted at the cause (not just symptom) of the problem. Prominent among these should be reforms addressing principal-agent contract design and the implementation of financial benchmarks.

Bubble Man Peter Hartcher, 2005 *Bubble Man* tells the story of the great American stockmarket bubble, its bursting and the role of the man who made it all possible - Alan Greenspan. Peter Hartcher provides a fascinating account of one of the biggest speculative frenzies in history, and how Alan Greenspan has managed to evade the blame for its fall-out. With Greenspan's public retirement planned for January 2006 this will get a lot of media attention both in the business and general pages.

The Reality Bubble Ziya Tong, 2019-05-14 WINNER OF THE 2020 LANE ANDERSON AWARD SHORTLISTED FOR THE 2020 RBC TAYLOR PRIZE From one of the world's most engaging science journalists, a groundbreaking and wonder-filled look at the hidden things that shape our lives in unexpected and sometimes dangerous ways. Our naked eyes see only a thin sliver of reality. We are blind in comparison to the X-rays that peer through skin, the mass spectrometers that detect the dead inside the living, or the high-tech surveillance systems that see with artificial intelligence. And we are blind compared to the animals that can see in infrared, or ultraviolet, or in 360-degree vision. These animals live in the same world we do, but they see something quite different when they look around. With all of the curiosity and flair that drives her broadcasting, Ziya Tong illuminates this hidden world, and takes us on a journey to examine ten of humanity's biggest blind spots. First, we are introduced to the blind spots we are all born with, to see how technology reveals an astonishing world that exists beyond our human senses. It is with these new ways of seeing that today's scientists can image everything from an atom to a black hole. In Section Two, our collective blind spots are exposed. It's not that we can't see, Tong reminds us. It's that we don't. In the 21st century, there are cameras everywhere, except where our food comes from, where our energy comes from, and where our waste goes. Being in the dark when it comes to how we survive makes it impossible to navigate our future. Lastly, the scope widens to our civilizational blind spots. Here, the blurred lens of history reveals how we inherit ways of thinking about the world that seem natural or inevitable but are in fact little more than traditions, ways of seeing the world that have come to harm it. This vitally important new book shows how science, and the curiosity that drives it, can help civilization flourish by opening our eyes to the landscape laid out before us. Fast-paced, utterly fascinating, and deeply humane, *The Reality Bubble* gives voice to the sense we've all had -- that there is more to the world than meets the eye.

When the Bubble Bursts Hilliard MacBeth, 2018-06-23 A newly updated edition for the fast-changing real estate market in Canada! Over the last two decades Canadians have become convinced that real estate is the "safe haven" investment. This widely held belief and obsession with real estate led millions of Canadians to take on massive amounts of debt — tripling their collective financial burden — ensuring that Canada is one of the most indebted nations on the planet. Drawing on dozens of interviews and even more conversations with individual Canadians and couples, this second edition also tackles the economic conditions and regulatory rules that allowed such a dangerous situation to develop in Canada, formerly a nation of conservative and prudent citizens. Hilliard MacBeth argues that Canada is in the midst of an unprecedented real estate bubble and that there will soon be a crash in house prices, triggering a financial crisis. Individual Canadians and families can still take action to protect themselves from the fallout of the bubble bursting — if they act quickly.

The South Sea Bubble Helen Paul, 2010-09-13 The book is an economic history of the South Sea Bubble. It combines economic theory and quantitative analysis with historical evidence in order to provide a rounded account. It brings together scholarship from a variety of different fields to update the existing historical work on the Bubble. Up until now, economic history research has not been integrated into mainstream histories of 1720. Technical work on share prices and ledgers has been inaccessible to a wider

audience. As well as providing new evidence against the gambling mania argument, the book also interprets the existing economic history scholarship for non-specialists.

Bubble Dynamics and Interface Phenomena John R. Blake, Jeremy M. Boulton-Stone, Neale H. Thomas, 2012-12-06 This volume contains papers presented at the IUTAM Symposium on Bubble Dynamics and Interface Phenomena held at the University of Birmingham from 6-9 September 1993. In many respects it follows on a decade later from the very successful IUTAM Symposium held at CALTECH in June 1981 on the Mechanics and physics of bubbles in liquids which was organised by the late Milton Plesset and Leen van Wijngaarden. The intervening period has seen major development with both experiment and theory. On the experimental side there have been advances with very high speed photography and data recording that provide detailed information on fluid and interface motion. Major developments in both computer hardware and software have also led to extensive improvement in our understanding of bubble and interface dynamics although development is still limited by the sheer complexity of the laminar and turbulent flow regimes often associated with bubbly flows. The symposium attracts wide and extensive interest from engineers, physical, chemical, biological and medical scientists and applied mathematicians. The scientific committee sought to achieve a balance between theory and experiment over a range of fields in bubble dynamics and interface phenomena. It was our intention to emphasise both the breadth and recent developments in these various fields and to encourage cross-fertilisation of ideas on both experimental techniques and theoretical developments. The programme, and the proceedings recorded herein, cover bubble dynamics, sound and wave propagation, bubbles in flow, sonoluminescence, acoustic cavitation, underwater explosions, bursting bubbles and ESWL.

The Bubble Universe: Psychological Perspectives on Reality Eugene Subbotsky, 2020-07-28 This book examines the role that human subjective experience plays in the creation of reality and introduces a new concept, the Bubble Universe, to describe the universe as it looks from the subjective viewpoint of an individual. Drawing on a range of research, the author questions the extent to which the scientific study of the origins of life, consciousness and subjective experience is itself influenced by scientists' subjective worlds. The author argues that in many respects the Bubble Universe differs from the universe as described by science and religion, and analyzes these differences. The fabric and structure of subjective reality is described, and various aspects of the Bubble Universe are examined, including science, religion, life, morality and history. The differences between the views from inside the subjective universe and from

scientific, religious and sociocultural versions of the universe are outlined, and their significance for practical and theoretical problems are highlighted and illustrated with psychological experiments. This book will be of value to all scholars interested in how subjectivity influences research and appeal in particular to those working in developmental and theoretical psychology, consciousness, epistemology, phenomenology, and the philosophy of science and of the mind.

Gas Bubble Dynamics in the Human Body Saul Goldman,Manuel Solano-Altamirano,Kenneth Ledez,2017-09-28 Gas Bubble Dynamics in the Human Body provides a broad range of professionals, from physicians working in a clinic, hospital or hyperbaric facility, to physical scientists trying to understand and predict the dynamics of gas bubble behavior in the body, with an interdisciplinary perspective on gas-bubble disease. Both iatrogenic and decompression-induced gas bubbles are considered. The basic medical and physiological aspects are described first, in plain language, with numerous illustrations that facilitate an intuitive grasp of the basic underlying medicine and physiology. Current issues in the field, particularly microbubbles and microparticles, and their possible role in gas-bubble disease are included. The physical and mathematical material is given at several levels of sophistication, with the hard-core math separated out in sections labelled For the Math Mavens, so that the basic concepts can be grasped at a descriptive level. The field is large and multi-disciplinary, so that some of the discussion that is at a greater depth is given separately in sections labelled In Greater Detail. Skipping these sections for whatever reason, shouldn't materially hamper acquiring an overall appreciation of the field. Demonstrates how physical and mathematical tools help to solve underlying problems across physiology and medicine Helps researchers extend their competence and flexibility to the point that they can personally contribute to the field of hyperbaric medicine and physiology, or to other related biological problems that may interest them Provides clinicians with explicit examples of how mathematical modelling can be integrated into clinical treatment and decision-making
