The Asperkid's Game Plan Jennifer Cook, 2014-04-21 The Asperkid's Game Plan looks from the inside at the learning style of children with Asperger syndrome and explains how to introduce structured play that engages Asperkids and explicitly addresses ASD weaknesses while reinforcing ASD strengths. Showing how just about anything can be turned into an opportunity for learning and growth, the book is full of go-to ideas for making simple play equipment in the home or classroom and using it to develop core skills that Asperkids struggle with, from fine motor and social skills, to planning and organization. Whether it's origami math, fried marbles, or a bug's eye view scavenger hunt, every

game, project, and idea in the book is explained with clear directions and learning objectives and illustrated with color photographs. Jennifer O'Toole's enthusiastic approach and fun lessons, based on Montessori principles, will inspire and motivate parents, educators, and therapists to make purposeful play a part of every Asperkid's day.

Play to Progress Allie Ticktin, 2022-07-05 A game-changing book on child development--and the importance of physical play--for this digital and screen age. For children to develop to their fullest potential, their sensory system—which, in addition to the big five of sight, hearing, taste, touch, and smell, includes movement and balance (vestibular), body awareness (proprioception), and internal perception (interoception)—needs to be stimulated from the time they are born. Their senses flourish when they explore their environment by touching new textures, including their food, running, jumping, climbing, and splashing outside. As an occupational therapist with a specialty in sensory integration, Allie Ticktin has seen an increase in cases of children who struggle to sit in circle time or at their desk upright and who are delayed in walking, talking, and playing by themselves and with their peers. In the

recent past, kids spent their days playing outside and naturally engaging their sensory system and building key developmental skills. But with increasing time pressures for both kids and parents, children are spending more time in front of screens and less time exploring and interacting with their environment. The good news is that boosting your child's sensory development doesn't take enormous amounts of time or supplies, or any special skills. Here, Ticktin discusses the eight sensory systems and how a child uses them, and offers easy, fun activities—as well as advice on setting up a play area—that will encourage their development so that your little one will be better able to respond to their emotions, build friendships, communicate their needs, and thrive in school. That's the power of sensory play.

Augmentative and Alternative Communication Intervention Janet L. Dodd, 2017-06-30

Augmentative and Alternative Communication Intervention: An Intensive, Immersive, Socially Based Delivery Model is ideal for school-based speech-language pathologists (SLPs) and an excellent resource for interventionists (special education teachers, ABA therapists) and SLPs working in other

settings who wish to develop an intensive, immersive Augmentative and Alternative Communication (AAC)-based intervention through a three-phase intervention process: assessment, intervention planning, and intervention implementation. Written by an SLP who has worked in a public school setting and saw to the application of theory to practice, the text provides detailed information regarding working with children who have complex communication needs and the background knowledge necessary for successful implementation of the intervention approach. Included are considerations for vocabulary selection for the beginning communicator, how to create a symbolically rich environment, detailed intervention approaches, and progress monitoring strategies that establish appropriate, measurable goals. AAC will no longer be an alternative means of communication but a best practice means of teaching communication in the SLP's or interventionist's repertoire. Making the leap from the theoretical to the practical, this essential book: Describes the intervention needs of children with complex communication needs and the limitations of current approaches (e.g., PECS, Milieu Training, Functional Communication Training). Operationally defines the goal of AAC intervention, discussing its

complexities, including the limitations of a pull-out model. Introduces the Intensive, Immersive, Socially Based Approach to Intervention and briefly describes each phase of the intervention process. Discusses how AAC assessments differ from traditional assessments of speech and language skills, as well as provides an overview of different assessment models and their contribution to the intervention process. Examines the importance of training support staff to key components of this intervention model. Contains information on the application of language-based intervention strategies to AAC. Talks about the importance of progress monitoring and how to use functional communication measures and communication sampling, a new and innovative technique developed by the author, to monitor progress. Provides example lesson plans and example goals addressing each area of communicative competence. *Disclaimer: Please note that ancillary content (such as documents, audio, and video, etc.) may not be included as published in the original print version of this book.

What Makes Time Special? Craig Callender, 2017 As we navigate through life we instinctively model time as having a flowing present that divides a fixed past from open future. This model develops

in childhood and is deeply saturated within our language, thought and behavior, affecting our conceptions of the universe, freedom and the self. Yet as central as it is to our lives, physics seems to have no room for this flowing present. This book demonstrates this claim in detail and then turns to two novel positive tasks. First, by looking at the world in the spatial directions it shows that physics is not 'spatializing time' as is commonly alleged. Second, if the flowing present is an illusion, it is a deep one worthy of explanation. The author develops a picture whereby the temporal flow arises as an interaction effect between an observer and the physics of the world. Using insights from philosophy, cognitive science, biology, psychology and physics, the theory claims that the flowing present model of time is the natural reaction to the perceptual and evolutionary challenges thrown at us. Modeling time as flowing makes sense even if it misrepresents it.--
