Words in Time and Place David Crystal,2014-09-18 Did you know that the English language has over 150 words for the adjective 'drunk' developed over 1,000 years? Be prepared to learn words you have never heard before, find out fascinating facts behind everyday words, and be surprised at how lively and varied the English language can be. Published to critical acclaim in 2009, the Historical Thesaurus of the Oxford English Dictionary is the first comprehensive thesaurus in the world to arrange words by meaning in order of first recorded use. Using its unique perspective on how the English language has developed, Words in Time and Place takes 15 themes and explores the language in these areas over time - explaining when new words appeared, where they came from, and what such changes say about times in which they emerged. The themes chosen are varied, universal topics and show the semantic range of the thesaurus and what it can tell us about the words used in areas of everyday life. Learn about the different words for dying and money, or types of pop music, as well as words for a privy, oaths, and words for being drunk. Written by the world's leading expert on the English language, David Crystal, the book carries his trademark style of engaging yet authoritative writing. Each chapter features an introduction to the language of that topic, followed by a timeline of vocabulary taken from the historical thesaurus showing all the synonyms arranged in chronological order. The timelines are annotated with additional quotations, facts, and social and historical context to give a clear sense of how words entered the English language, when, and in which context they were used. Words in Time and Place showcases the unique and excellent resource that is the Historical Thesaurus and reveals the linguistic treasures to be found within. This fascinating book will appeal to anyone with an interest in words and in the development of the English language.

K-pop Dance Chuyun Oh,2022-07-01 This book is about K-pop dance and the evolution and presence of its dance fandom on social media. Based on five years of ethnographic fieldwork, interviews, choreography, and participation-observation with 40 amateur and professional K-pop dancers in New York, California, and Seoul, the book traces the evolution of K-pop dance from the 1980s to the 2020s and explains its distinctive feature called ‘gestural point choreography’ – front-driven, two-dimensional, decorative and charming movements of the upper body and face – as an example of what the author theorizes as ‘social media dance.’ It also explores K-pop cover dance as a form of intercultural performance, suggesting that, by imitating and idolizing K-pop dance, fans are eventually ‘fandoming’ themselves and their bodies. Presenting an ethnographic study of K-pop dance and its fandom, this book will be a valuable resource for students and scholars of Media Studies, Korean Studies, Performance Studies, and Dance.

Nanotheranostics for Personalized Medicine Simona Mura,Patrick Couvreur,2016-02-22 The application of nanotechnology in the biomedical field, known as nanomedicine, has gained much interest in the recent past as a versatile strategy for selective drug delivery and diagnostic purposes. The nanotheranostic approach, which aims to combine both therapeutic and imaging/diagnostic functionalities, is characterized by a strong pluridisciplinarity where the chemistry of materials, bioconjugate chemistry, pharmaceutical technology, drug delivery, imaging, and pharmacology, work together. Nanotheranostics combine simultaneous non-invasive diagnosis and treatment of diseases with the exciting possibility to monitor drug release and distribution in real time; thus offering the opportunity to optimize treatment outcomes in cancer and other severe diseases. Clinical applications of nanotheranostics would enable earlier detection and treatment of diseases, and earlier assessment of the response, thus allowing to identify patients which would potentially respond to therapy and have higher possibilities of a favorable outcome. Nanotheranostics for Personalized Medicine presents an integrated and transdisciplinary description of nanotheranostics. It provides principles of imaging techniques

and concrete examples of advances and challenges in the development of nanotheranostics for personalized medicine. This book is written for students (Bachelors to Doctoral level) as well as experienced researchers, in academia or the industry, interested in this emerging concept in the nanomedicine field. Contents: Combining Imaging and Drug Delivery for the Treatment of Severe Diseases (Simona Mura and Patrick Couvreur) Increased Sensitivity for Medical Imaging Using Non-Ionizing Nanomedicine as Contrast Agents (Cyrille Richard, Bich-Thuy Doan and Nathalie Mignet) MRI T2 Weighted Theranostic Nanodevices and Chemotherapy (Sophie Laurent, Luce Vander Elst, Dimitri Stanicki and Robert N Muller) MRI T1 Weighted Theranostic Nanodevices (Lucie Sancey, François Lux, Géraldine Le Duc, Sabin Carme and Olivier Tillement) Optical Imaging and Chemotherapy (Guillaume Bort, Simona Mura and Patrick Couvreur) Plasmonic Nanoparticles-Coated Microbubbles for Theranostic Applications (Mark A Borden, Jacob D Dove and Todd W Murray) Contribution of Nuclear Medicine to Cancer Nanotheranostics (Thomas Lars Andresen, Anncatrine L Petersen, Anders E Hansen and Jonas R Henriksen) Nanotheranostics in Gene Therapy (Madhura Deshpande, Shravan Kumar Sriraman and Vladimir Torchilin) Nanotheranostics in Cardiovascular Diseases (Maya Juenet, Mariana Varna, Cédric Chauvierre and Didier Letourneur) Stimuli-Responsive Nanotheranostics (Basit Yameen, Jun Wu, Critian Vilos, Andrew Whyte David Werstler, Lori Pollit and Omid C Farokhzad) Advancing the Practical Clinical Utility in Personalized Medicine: Capabilities and Lessons Learned for Pharmacology and Pharmaceuticals (Ioannis S Vizirianakis, Christina Karavasili, Elsa P Amanatiadou and Dimitrios G Fatouros) Readership: Advanced undergraduates, graduates, as well as experimental researchers in academia or the industry with an interest in this emerging concept in the nanomedicine world. Key Features: This book presents an integrated and transdisciplinary description of an emerging concept in the world of nanomedicine: nanotheranostics This work is one of the few dedicated to nanotheranostics and its applications Written by well-recognized experts in academia, this book would offer to the reader a clear overview of the progresses in the field of nanotheranostics and their fundamental contribution to the field of personalized medicine Reading this book would open the way to further improvements and to the possible clinical translation of the nanotheranostics concept in the not-too-distant future Keywords: Bioengineering; Nanomedicine & Nanobiology; Biomedical Engineering; Medical Imaging; Therapy
