Boom and Bust William Quinn, John D. Turner, 2020-08-06 Why do stock and housing markets sometimes experience amazing booms followed by massive busts and why is this happening more and more frequently? In order to answer these questions, William Quinn and John D. Turner take us on a riveting ride through the history of financial bubbles, visiting, among other places, Paris and London in 1720, Latin America in the 1820s, Melbourne in the 1880s, New York in the 1920s, Tokyo in the 1980s, Silicon Valley in the 1990s and Shanghai in the 2000s. As they do so, they help us understand why bubbles happen, and why some have catastrophic economic, social and political consequences whilst others have actually benefited society. They reveal that bubbles start when investors and speculators react to new technology or political initiatives, showing that our ability to predict future bubbles will ultimately come down to being able to predict these sparks.

Bubbles and Contagion in Financial Markets, Volume 1 E. Porras, 2016-06-29 Understanding the formation of bubbles and the contagion mechanisms afflicting financial markets is a must as extreme volatility events leave no market untouched. Debt, equity, real estate, commodities... Shanghai, NY, or London: The severe fluctuations, explained to a large extent by contagion and the fear of new bubbles imploding, justify the newly awakened interest in the contagion and bubble dynamics as yet again the world braces for a new global economic upheaval. *Bubbles and Contagion in Financial Markets* explores concepts, intuition, theory, and models. Fundamental valuation, share price development in the presence of asymmetric information, the speculative behavior of noise traders and chartists, herding and the feedback and learning mechanisms that surge within the markets are key aspects of these dynamics. Bubbles and contagion are a vast world and fascinating phenomena that escape a narrow exploration of financial markets. Hence this work looks beyond into macroeconomics, monetary policy, risk aggregation, psychology, incentive structures and many more subjects which are in part co-responsible for these events. Responding to the ever more pressing need to disentangle the dynamics by which financial local events are transmitted across the globe, this volume presents an exhaustive and integrative outlook to the subject of bubbles and contagion in financial markets. The key objective of this volume is to give the reader a comprehensive understanding of all aspects that can potentially create the conditions for the formation and bursting of bubbles, and the aftermath of such events: the contagion of macro-economic processes. Achieving a better understanding of the formation of bubbles and the impact of contagion will no doubt determine the stability of future economies - let these two volumes be the starting point for a rational approach to a seemingly irrational phenomena.

Early Speculative Bubbles and Increases in the Supply of Money, 2009-03-16 The Housing Bubble was hardly the first in human history. What's eluded historians is the same issue that eludes commentators today: the underlying cause of bubbles. This book is the first (and only) book to solve the mystery of the most famous bubble in world history: Tulipmania in 17th century Netherlands. It is a legendary event but explanations have been lacking. People blame irrational exuberance, free markets, and an unleashed aristocracy. Douglas French takes a different route: he follows the money to prove that the bubble resulted from a government intervention that dramatically exploded the money supply and fueled the tulip-price bubble - not altogether different from modern bubbles. This book was French's Master's thesis written under the direction of Murray Rothbard and examining three of

the most famous speculative bubble episodes in history through the lens of Austrian Business Cycle Theory. Although each of these episodes is well documented, this book examines the monetary interventions that engendered each of these events showing that not only the Mississippi Bubble and the South Sea Bubble were caused by government meddling, but Tulipmania was as well. Tulipmania was unique in that it was the sound money policy of the Dutch combined with free coinage laws that led to an acute increase in the supply of money and fostered an atmosphere that was ripe for speculation and malinvestment, manifesting itself in the intense trading of tulip bulbs. The author examines not only the Mississippi Bubble but also the life and monetary theories of its architect, John Law. Professor Joe Salerno calls Law the world's first macroeconomist who implemented a Keynesian monetary system in France nearly two hundred years before Keynes was born. At the same time across the English Channel, a nearly bankrupt British government looked on with envy at Law's system, believing that he was working a financial miracle. It was anything but this and investors in both countries were devastated. Although these episodes occurred centuries ago, readers will find the events eerily similar to today's bubbles and busts: low interest rates, easy credit terms, widespread public participation, bankrupt governments, price inflation, frantic attempts by government to keep the booms going, and government bailouts of companies after the crash. When will we learn? We first have to get cause and effect in history straight. This book is an excellent contribution to that effort.

Famous First Bubbles Peter M. Garber, 2001-08-24 The jargon of economics and finance contains numerous colorful terms for market-asset prices at odds with any reasonable economic explanation. Examples include bubble, tulipmania, chain letter, Ponzi scheme, panic, crash, herding, and irrational exuberance. Although such a term suggests that an event is inexplicably crowd-driven, what it really means, claims Peter Garber, is that we have grasped a near-empty explanation rather than expend the effort to understand the event. In this book Garber offers market-fundamental explanations for the three most famous bubbles: the Dutch Tulipmania (1634-1637), the Mississippi Bubble (1719-1720), and the closely connected South Sea Bubble (1720). He focuses most closely on the Tulipmania because it is the event that most modern observers view as clearly crazy. Comparing the pattern of price declines for initially rare eighteenth-century bulbs to that of seventeenth-century bulbs, he concludes that the extremely high prices for rare bulbs and their rapid decline reflects normal pricing behavior. In the cases of the Mississippi and South Sea Bubbles, he describes the asset markets and financial manipulations involved in these episodes and casts them as market fundamentals.

Gold Bubble Yoni Jacobs, 2012-03-21 How do TV shows, vending machines, Chinese taxi companies, and a former UK prime minister point to a gold bubble that is about to burst? Many investors consider gold a safe haven that will shelter them from recessions, falling markets, and the depreciating value of currency. Many fail to realize, however, that investing in gold at these levels is extremely risky. We Buy Gold stores line busy streets, gold miners are no longer protecting themselves from a potential drop in prices, and gold is even being sold in vending machines. All this points to one thing: a gold bubble has formed and will collapse very soon, hurting investors, funds, and banks. In *Gold Bubble: Profiting From Gold's Impending Collapse*, Yoni Jacobs looks at how you can protect yourself. Presenting an in-depth analysis of gold dating back over a hundred years, the book explores the structural factors that have allowed gold to form a bubble, why an investor psychology of fear and greed is leading to extremely speculative behavior, why gold will fall during an upcoming recession, what effect the dollar and the stock market will have on the future of gold prices, and how to profit from a gold collapse while the majority of investors lose out. There are plenty of warning signs that gold is about to decline and this book will help you to get ready. *Gold Bubble* is the only book to argue that a gold bust is coming,

going head-to-head with the herd mentality Filled with practical advice on how to protect yourself and even profit from gold's collapse by being prepared for what's ahead With gold prices up over 2,500 percent since 1970, and more than 600 percent since 1999, a bubble has formed and is on the verge of bursting. But until now, no one has been willing to publicly bet against the universal currency. With Gold Bubble you are ready to meet this challenge head on, and take advantage of what other investors won't even acknowledge.

Bubble Man Peter Hartcher,2005 Bubble Man tells the story of the great American stockmarket bubble, its bursting and the role of the man who made it all possible - Alan Greenspan. Peter Hartcher provides a fascinating account of one of the biggest speculative frenzies in history, and how Alan Greenspan has managed to evade the blame for its fall-out. With Greenspan's public retirement planned for January 2006 this will get a lot of media attention both in the business and general pages.

Central Banks at a Crossroads Michael D. Bordo,Øyvind Eitrheim,Marc Flandreau,Jan F. Qvigstad,2016-06-09 This book discusses the role of central banks and draws lessons from examining their evolution over the past two centuries.

Financial Market Bubbles and Crashes, Second Edition Harold L. Vogel,2018-08-16 Economists broadly define financial asset price bubbles as episodes in which prices rise with notable rapidity and depart from historically established asset valuation multiples and relationships. Financial economists have for decades attempted to study and interpret bubbles through the prisms of rational expectations, efficient markets, and equilibrium, arbitrage, and capital asset pricing models, but they have not made much if any progress toward a consistent and reliable theory that explains how and why bubbles (and crashes) evolve and can also be defined, measured, and compared. This book develops a new and different approach that is based on the central notion that bubbles and crashes reflect urgent short-side rationing, which means that, as such extreme conditions unfold, considerations of quantities owned or not owned begin to displace considerations of price.

The Era of Uncertainty Francois Trahan,Katherine Krantz,2011-07-13 Macroeconomic Investment Strategies for an Era of Economic Uncertainty "Over the years, François' insightful analyses of the business cycle has led to market calls that have both benefitted investors on the upside and (more important to many) protected them from losses on the downside. François' incredible track record in successfully interpreting the trends that can be found in leading indicators and other macroeconomic data have also led to his well deserved reputation as an expert in sector rotation - providing investors on both the long and short side of the market opportunities to profit from his ideas. In my opinion, his most important and influential macro prediction to date was his call in the middle of the last decade when he predicted that the worst housing crisis in American history would soon be upon us, and that it would have far-ranging implications for both the global economy and world financial markets."

The Post-Bubble US Economy P. Arestis,E. Karakitsos,2004-09-07 The US is slowly recovering from the aftermath of the burst of the 'new economy' bubble - which was one of the worst in monetary history. Philip Arestis and Elias Karakitsos examine the causes and consequences of the burst of the 'new

economy' bubble and investigate the impact on financial markets. The risks and long-term prospects for the economy and financial markets are also examined.

When Bubbles Burst John Calverley, 2011-01-11 A meticulous examination of the financial crisis of 2008, exploring the implications and solutions for individuals, companies, and central banks.

The Housing Bubble Kieran Trass, 2009-08-03 After a long-running property market boom, all indications are that New Zealand is facing at least half a decade of slow or declining values. This trend is mirrored in most countries across the globe. Kieran Trass, real estate investor, advisor and commentator, reassures us that yes, we can still make money at all stages of the property cycle - slump, recovery and boom. The key is having the right knowledge and information. The Housing Bubble addresses all your real-estate questions, including: 'How will we know when the slump is coming to an end?' 'When is it a good time to buy?' and 'When will we see market recovery?'

Mathematics for the Environment Martin Walter, 2011-01-18 Mathematics for the Environment shows how to employ simple mathematical tools, such as arithmetic, to uncover fundamental conflicts between the logic of human civilization and the logic of Nature. These tools can then be used to understand and effectively deal with economic, environmental, and social issues. With elementary mathematics, the book se

Speculative Bubbles, Speculative Attacks, and Policy Switching Robert P. Flood, Peter M. Garber, 1994 The papers in this book are grouped into three sections: the first on price bubbles is primarily financial; the second on speculative attacks (on exchange rate regimes) is international in scope; and the third, on policy switching, is concerned with monetary policy.
