Genetic Algorithms in Applications Rustem Popa,2012-03-21 Genetic Algorithms (GAs) are one of several techniques in the family of Evolutionary Algorithms - algorithms that search for solutions to optimization problems by evolving better and better solutions. Genetic Algorithms have been applied in science, engineering, business and social sciences. This book consists of 16 chapters organized into five sections. The first section deals with some applications in automatic control, the second section contains several applications in scheduling of resources, and the third section introduces some applications in electrical and electronics engineering. The next section illustrates some examples of character recognition and multi-criteria classification, and the last one deals with trading systems. These evolutionary techniques may be useful to engineers and scientists in various fields of specialization, who need some optimization techniques in their work and who may be using Genetic Algorithms in their applications for the first time. These applications may be useful to many other people who are getting familiar with the subject of Genetic Algorithms.

Central Banking after the Great Recession David Wessel,2014-04-28 The global financial crisis is largely behind us, but the challenges it poses to the future stability of the world's economic system affects everyone from American families to Main Street businesses to Wall Street financial powerhouses. It has provoked controversy over the best way to reduce the risk of a repeat of what proved to be the worst financial crisis since the Great Depression. To describe those challenges—and the lessons learned—the Hutchins Center on Fiscal and Monetary Policy at Brookings turned to frontline policymakers and some of their most prominent critics. *Central Banking after the Great Recession* contains the resulting research, leading off with a telling interview between Ben Bernanke, then in his final weeks as Federal Reserve chairman, and Liaquat Ahamed, author of the Pulitzer Prize-winning *Lords of Finance*. Insightful chapters by John Williams of the San Francisco Federal Reserve Bank, Paul Tucker of Harvard University, and Donald Kohn of Brookings discuss unconventional monetary policy, financial regulation, the impact of the crisis on the independence of the Federal Reserve. Each chapter is followed by a lively debate.
