Build Your Own Home Theater John Adams, Robert Wolenik, 2001-09-18 Written to provide information on all price ranges of equipment to everyone from the beginner to the experienced home theater owner, *Build Your Own Home Theater* has been completely updated for today's audience. This new edition contains valuable consumer information on the latest digital home theater components and technology, including digital surround sound receivers, DVD players, digital television & HDTV, digital satellites (DBS), digital camcorders, and digital hard-drive video recorders. It also features easy-to-understand explanations of surround sound technology and set ups-including Dolbyâ Digital, THX Surround EXTM, and DTS-ESTM. Videophiles, technicians, engineers, and electronics hobbyists from all walks of life will especially find it invaluable. *Dolby and the double-D symbol are registered trademarks and Surround Sound EX is a trademark of Dolby Laboratories. Building Continents of Knowledge in Oceans of Data: The Future of Co-Created EHealth A. Ugon,D.

Karlsson,G.O. Klein,2018-05-18 The domain of eHealth faces ongoing challenges to deliver 21st century healthcare. Digitalization, capacity building and user engagement with truly interdisciplinary and cross-domain collaboration are just a few of the areas which must be addressed. This book presents 190 full papers from the

Medical Informatics Europe (MIE 2018) conference, held in Gothenburg, Sweden, in April 2018. The MIE conferences aim to enable close interaction and networking between an international audience of academics, health professionals, patients and industry partners. The title of this year's conference is: Building Continents of Knowledge in Oceans of Data - The Future of Co-Created eHealth, and contributions cover a broad range of topics related to the digitalization of healthcare, citizen participation, data science, and changing health systems, addressed from the perspectives of citizens, patients and their families, healthcare professionals, service providers, developers and policy makers. The second part of the title in particular has attracted a large number of papers describing strategies to create, evaluate, adjust or deliver tools and services for improvements in healthcare organizations or to enable citizens to respond to the challenges of dealing with health systems. Papers are grouped under the headings: standards and interoperability, implementation and evaluation, knowledge management, decision support, modeling and analytics, health informatics education and learning systems, and patient-centered services. Attention is also given to development for sustainable use, educational strategies and workforce development, and the book will be of interest to both developers and practitioners of healthcare services.

Rhetoric and the Digital Humanities Jim

Ridolfo, William Hart-Davidson, 2015-01-19 Within the digital humanities, rhetoric has emerged as a nexus of incredible innovation, and Rhetoric and the Digital Humanities provides extensive and much-needed guidance on how the theories and methodologies of rhetorical studies can be marshaled in highly successful ways to enhance all work in digital humanities. In addition to an

insightful introduction from the editors, the book offers essays from leading scholars in a variety of disciplines, organized into three tightly focused sections. The first consists of seven chapters that define field connections between rhetoric and the digital humanities. The second section offers six chapters focused on research methodology. And the third presents ten chapters offering forward-looking recommendations on pathways for exploring interdisciplinary trajectories between rhetorical studies and the digital humanities. This timely edited collection will do much to promote and strengthen interdisciplinary collaborations in the digital humanities.

Dis/organization as Communication Consuelo Vásquez, Timothy Kuhn, 2019-03-13 This book accounts for the transformation of organizations in a post-bureaucratic era by bringing a communicational lens to the ontological discussion on organization/disorganization, offering a conceptual and methodological toolbox for studying dis/organization as communication. Increasingly, scholars acknowledge that communication is constitutive of organization; because meaning is always indeterminate, communication also (and simultaneously) generates disorganization. The book synthesizes the major theoretical trends and empirical studies in communication that engage with dis/organization. Drawing on dialectics, relational ontologies, critical theory, systems theory, and affect thinking, the first part of the book offers communicational explanations of how dis/organization unfolds. The second part of the book grounds this theoretical reflection, providing empirical studies that mobilize diverse methodological and analytical frameworks (e.g., ethnography, situational, interactional and genre analysis) for studying the practices of dis/organization. Overall, the book exposes organizations (and organizing processes) as

significantly messier, irrational (or a-rational), and paradoxical than scholars of organization typically think. It also offers readers the conceptual and methodological tools to understand these complex processes as communication. This book will be essential reading for scholars in organizational communication or management and organization studies, together with senior undergraduate and graduate students studying organizational communication, organizational discourse, discourse analysis (including rhetoric, semiotics, pragmatism, narratology) and courses in management studies. It will also be richly rewarding for organizational consultants, managers and executives.

Fundamentals of Electronic Imaging Systems

William F. Schreiber, 2012-12-06 Image processing is a fascinating applications area, not a fundamental science of sufficient generality to warrant studying it for its own sake. In this area, there are many opportunities to apply art and experience, as well as knowledge from a number of sciences and engineering disciplines, to the creation of products and processes for which society has an expressed need. Without this need, work in the field would be sterile, but with it, image processing can readily provide the interested scientist or engineer with a professional lifetime of challenging problems and corresponding rewards. This point of view motivates this book and has influenced the selection and treatment of topics. I have not attempted to be encyclopedic; this service has already been performed by others. It will be noted that the word digital is not in the title of this book. While much of present-day image processing is implemented digitally, this work is not intended for those who think of image processing as a branch of digital signal processing, except, perhaps, to try to change their minds. Image gathering and image display, vital parts of the field with strong effects on image quality, are inherently analog, as are all of the channels and media now used, or likely to be used in the future, to record TV signals and to transmit them to the home.
