

Burning Birds

SA Adler

Burning Bird John Donnelly,2013 It's the height of the summer and Daisy's fifteenth birthday. Trouble is brewing - in North London, someone's been shot. There's a curfew in place, school is suspended and the city is changing, but Daisy has an important delivery to make across town. When Morell offers her a ride in his uncle's car, she sets off down a road from which there might be no turning back. Set against the backdrop of the London riots, *Burning Bird*, questions the decisions we make and explores the freedoms we find when authority goes missing. Ideal for young people ages 13+ it was presented at the Union Theatre, London, in November 2012 by Synergy Theatre Project, a groundbreaking theatre company working with prisoners, ex-prisoners and young people at risk.

The Problems of Birds as Pests R. K. Murton,E. N. Wright,2013-09-03 The Problems of Birds as Pests covers the proceedings of the symposium held at the Royal Geographical Society in London on 28 and 29 September 1967. The text focuses on the problems posed by birds on agriculture and air transport, as well as control of population, scaring techniques, and warning systems. The selection first discusses prospective considerations concerning bio-acoustics in relation to bird-scaring techniques and recent developments in bird scaring on airfields. Topics include system of behavior and hierarchy of signals, informative content of acoustic signals, and signal-noise ratio. The book also ponders on bird recognition by radar and bird warning system for aircrafts in flight. The publication reviews the rook issue in North-East Scotland and the problems brought by the oystercatchers, including availability of field crops and their utilization by rooks, rook population, and food intake of the birds and comparison with stock and fishing levels. The manuscript then surveys predator-prey relationships in bird damage and population control and the quelea problem in Africa. The selection is a valuable source of information for ornithologists and readers interested in the characteristic of birds as pests.

The Burning Bird Samuel Youd,1964

A Most Damnable Invention Stephen R. Bown,2005-10-01 Swedish chemist Alfred Nobel's discovery of dynamite made possible the famous industrial megaprojects that transformed the countryside and defined the era, including the St. Gothard rail tunnel through the Alps, the clearing of New York harbor, the Panama Canal, and countless others. Dynamite also caused terrible injuries and great loss of life, and, in some cases, incalculable and irreparable environmental damage. Nobel was one of the richest men in a society rapidly transforming under the power of his invention, but with a troubled conscience, he left his estate to the establishment of the world-famous prizes that bear his name. As the use of explosives soared and growing populations consumed more food, nations scrambled for the scarce yet vital organic ingredient needed for both. The quest for nitrates takes us from the rural stables and privies of preindustrial Europe to the monopoly trading plantations in India and to the Atacama Desert in South America. Nitrates were as valuable in the nineteenth century as oil is in the twenty-first and were the cause of similar international jockeying and power politics. The nitrogen problem of creating inorganic nitrates was solved by an enigmatic German scientist named Fritz Haber. His breakthrough not only prolonged the First World War but became the foundation of the green revolution and the tripling of world population since then. Haber is also known as the father of gas warfare for his work on poison gas. When he was awarded a Nobel Prize for his work in chemistry, it sparked international outrage and condemnation. **A Most Damnable Invention** is a human tale of scientific obsession, shadowy immorality, and historical irony, and a testament to the capacity for human ingenuity during times of war.
