Dunkirk and the Little Ships Philip Weir, 2020-10-29 During 1940 the German army swept with devastating speed across the Low Countries and into northern France and drove Allied forces back into a small pocket around Dunkirk. Without a swift withdrawal across the English Channel, the latter faced certain death or capture. The evacuation plan - Operation Dynamo - initially calculated that 45,000 men might be rescued, but between 26 May and 4 June 338,226 men were in fact brought back to England. Naval historian Philip Weir shows how this was made possible by a vast armada of disparate vessels including destroyers, minesweepers, fishing vessels and, most famously of all, the privately owned 'Little Ships'. He explores the vessels' various roles within the evacuation, and their subsequent fates, including preservation and participation in commemorative return runs to the port, which now take place every five years.

Collective Memory and Oral Text Marta Wójcicka, 2020-03-09 The aim of this monograph is an attempt to examine the relationship between collective memory and oral texts. The material basis for this presentation consists of folklore oral texts, both prosaic and poetic, different as regards their genres (fairy tales, fables, recollections, traditions, legends, proverbs, and songs) as well as texts that are fragments of spontaneous interviews. The monograph consists of five main parts devoted to the following themes: theoretical considerations, the relation between memory and language, text memory, genre memory, and the relation between memory and the folk artistic style.

X-Rays and Extreme Ultraviolet Radiation David Attwood, Anne Sakdinawat, 2017-02-16 With this fully updated second edition, readers will gain a detailed understanding of the physics and applications of modern X-ray and EUV radiation sources. Taking into account the most recent improvements in capabilities, coverage is expanded to include new chapters on free electron lasers (FELs), laser high harmonic generation (HHG), X-ray and EUV optics, and nanoscale imaging; a completely revised chapter on spatial and temporal coherence; and extensive discussion of the generation and applications of femtosecond and attosecond techniques. Readers will be guided step by step through the mathematics of each topic, with over 300 figures, 50 reference tables and 600 equations enabling easy understanding of key concepts. Homework problems, a solutions manual for instructors, and links to YouTube lectures accompany the book online. This is the 'go-to' guide for graduate students, researchers and industry practitioners interested in X-ray and EUV interaction with matter.

The Last Century of Sea Power, Volume 2 H. P. Willmott, 2010-03-22 "An important contribution . . . a thoughtful account of the years preceding the Second World War and, at much greater length, of the war itself." -History In this second volume of his history of naval power in the 20th century, H. P. Willmott follows the fortunes of the established seafaring nations of Europe along with two upstarts-the United States and Japan. Emerging from World War I in command of the seas, Great Britain saw its supremacy weakened through neglect and in the face of more committed rivals. Britain's grand Coronation Review of 1937 marked the apotheosis of a sea power slipping into decline. Meanwhile, Britain's rivals and soon-to-be enemies were embarking on significant naval building programs that would soon change the nature of war at sea in ways that neither they nor their rivals anticipated. By the end of a new world war, the United States had taken command of two oceans, having placed its industrial might behind technologies that further defined the arena of naval power above and below the waves, where stealth and the ability to strike at great distance would soon rewrite the rules of war and of peace. This splendid volume further enhances Willmott's stature as the dean of naval historians. Praise for The Last Century of Sea Power series "The author, dean of naval historians, provides a sweeping look at, and analysis of, the transformation of naval power . . . Willmott is fearless in his judgments."

–Seapower “H. P. Willmott is the finest naval historian and among the finest historians of any discipline writing today.” –Bernard D. Cole, author of *The Great Wall at Sea*

**Anti-Gender Politics in the Populist Moment** Agnieszka Graff, Elżbieta Korolczuk, 2021-09-15 This book charts the new phase of global struggles around gender equality and sexual democracy: the ultraconservative mobilization against gender ideology and feminist efforts to counteract it. It argues that anti-gender campaigns, which emerged around 2010 in Europe, are not a simple continuation of the anti-feminist backlash dating back to the 1970s, but part of a new political configuration. Opposition to gender has become a key element of the rise of right-wing populism, which successfully harnesses the anxiety, shame and anger caused by neoliberalism and threatens to destroy liberal democracy. *Anti-Gender Politics in the Populist Moment* offers a novel conceptualization of the relationship between the ultraconservative anti-gender movement and right-wing populist parties, examining the opportunistic synergy between these actors. The authors map the anti-gender campaigns as a global movement, putting the Polish case in a comparative perspective. They show that the anti-gender rhetoric is best understood as a reactionary critique of neoliberalism as a socio-cultural formation. The book also studies the recent wave of feminist mass mobilizations, viewing the transnational revolt of women as a left populist movement. This is an important study for those doing research in politics, cultural studies, gender and sexuality studies and sociology. It will also be useful for activists and policy makers. **Computational Science – ICCS 2002** Peter M.A. Sloot, C.J. Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2003-08-01 Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems. The area of application includes natural systems – such as biology, environmental and geo-sciences, physics, and chemistry – and synthetic systems such as electronics and financial and economic systems. The discipline is a bridge between ‘classical’ computer science – logic, complexity, architecture, algorithms – mathematics, and the use of computers in the aforementioned areas. The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines, which can be tackled by advances made in this field. For instance new models and methods to study environmental issues like the quality of air, water, and soil, and weather and climate predictions through simulations, as well as the simulation-supported development of cars, airplanes, and medical and transport systems etc. Paraphrasing R. Kenway (R.D. Kenway, *Contemporary Physics*. 1994): ‘There is an important message to scientists, politicians, and industrialists: in the future science, the best industrial design and manufacture, the greatest medical progress, and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science’. Nowadays we have access to high-end computer architectures and a large range of computing

environments, mainly as a consequence of the enormous stimulus from the various international programs on advanced computing, e.g.

**Learner's Dictionary for Students and Professionals** Katarzyna Czabanowska, 2008-06-22 Public Health has become an increasingly prominent discipline within all European member states and also across the European Union as a whole. Public health professionals have to cooperate across borders, using mainly English as a means of both face to face communication and information dissemination. As a result, there has been a transformation in the way in which public health is taught and practiced: language, therefore, adds another dimension to this already multidisciplinary and multi-faceted field of study. The Leonardo Project English for European Public Health. A Specialized Course for Students and Professionals has been created in response to this new trend. An international team of both health sciences specialists and language specialists has collaborated on a collection of materials which seeks to address the new needs. The collection consists of a student coursebook, an instructor's manual, a learner's dictionary and an online learning environment. Texts representative of the major fields of Public Health have been collated and developed for didactic purposes, covering Epidemiology, Environmental Health, Health Promotion, Health Policy, Health Economics, Management, Health Ethics and Law, and Research. The Learner's Dictionary is a first attempt to develop a comprehensive, interdisciplinary aid to vocabulary learning for Public Health teachers and students across Europe. It has been developed through a unique combination of Public Health specialists and language teachers working together to define and translate a wide range of Public Health terms which are sufficiently accurate to assist professional development whilst at the same time presented in a way that will enhance language acquisition. Although the principal target learners are university students, the materials have much to offer professionals and practitioners as well.
