The Spirit of Attack Bruce Gordon, 2014-01-28 SCRAMBLE! In a couple of minutes my wingman and I would be airborne on another adventure. Sometimes we intercepted an airliner, sometimes a misplaced B-52 bomber, and sometimes Russian bombers probing our defenses; Russian warships; MIG fighters; or troops in contact in Vietnam, calling for napalm only yards from their positions. Twice it was UFOs - Unidentified Flying Objects! This book is a series of short stories, supported by more than 90 photographs. The first part has my own stories; later stories were contributed by my fellow pilots. The last story is from WW II of our P-38 fighters attacking the Romanian oil fields and getting badly mauled by defending Romanian fighters - and a Romanian pilot's view of the battle! Only the spirit of attack borne in a brave heart will bring success to any fighter aircraft, to matter how highly developed the aircraft may be. That quote from Adolf Galland, an Ace of the German Luftwaffe in WW II, was the motto of our 317th Fighter Interceptor Squadron in Alaska. The fighter pilot is a hunter, and his quarry is the most dangerous in the world - men who want to kill him! The best defense is a good offense - ATTACK! The US Air Force had a program called Every Man a Tiger. A tiger does not kill impulsively or in anger, but plans his attack carefully and strikes with cool ferocity. We were tigers! Fighter pilots tell stories around the bar, but they seldom write them down. These stories were written by the fighter pilots themselves! Come with me and hear of the beauty of flight, the mortal danger of electrical power failure at night in a snowstorm, and the thrill of attack with 20mm cannons firing right under your feet!

Springer Handbook of Science and Technology Indicators Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents and electronic communications, the individual chapters, written by leading experts, discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes, such as the journal impact factor and the h-index, as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification and database search methods to retrieve patent-related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

The European Blood and Marrow Transplantation Textbook for Nurses Michelle Kenyon, Aleksandra Babic, 2018-03-14 This book is open access under a CC BY 4.0 license. This textbook, endorsed by the European Society for Blood and Marrow Transplantation (EBMT),

provides adult and paediatric nurses with a full and informative guide covering all aspects of transplant nursing, from basic principles to advanced concepts. It takes the reader on a journey through the history of transplant nursing, including essential and progressive elements to help nurses improve their knowledge and benefit the patient experience, as well as a comprehensive introduction to research and auditing methods. This new volume specifically intended for nurses, complements the ESH-EBMT reference title, a popular educational resource originally developed in 2003 for physicians to accompany an annual training course also serving as an educational tool in its own right. This title is designed to develop the knowledge of nurses in transplantation. It is the first book of its kind specifically targeted at nurses in this specialist field and acknowledges the valuable contribution that nursing makes in this area. This volume presents information that is essential for the education of nurses new to transplantation, while also offering a valuable resource for more experienced nurses who wish to update their knowledge.

Other People's Children Lisa D. Delpit,2006 An updated edition of the award-winning analysis of the role of race in the classroom features a new author introduction and framing essays by Herbert Kohl and Charles Payne, in an account that shares ideas about how teachers can function as cultural transmitters in contemporary schools and communicate more effectively to overcome race-related academic challenges. Original.

BioMEMS Simona Badilescu,Muthukumaran Packirisamy,2011-06-13 As technological advancements widen the scope of applications for biomicroelectromechanical systems (BioMEMS or biomicrosystems), the field continues to have an impact on many aspects of life science operations and functionalities. Because BioMEMS research and development require the input of experts who use different technical languages and come from varying disciplines and backgrounds, scientists and students can avoid potential difficulties in communication and understanding only if they possess a skill set and understanding that enables them to work at the interface of engineering and biosciences. Keeping this duality in mind throughout, *BioMEMS: Science and Engineering Perspectives* supports and expedites the multidisciplinary learning involved in the development of biomicrosystems. Divided into nine chapters, it starts with a balanced introduction of biological, engineering, application, and commercialization aspects of the field. With a focus on molecules of biological interest, the book explores the building blocks of cells and viruses, as well as molecules that form the self-assembled monolayers (SAMs), linkers, and hydrogels used for making different surfaces biocompatible through functionalization. The book also discusses: Different materials and platforms used to develop biomicrosystems Various biological entities and pathogens (in ascending order of complexity) The multidisciplinary aspects of engineering bioactive surfaces Engineering perspectives, including methods of manufacturing bioactive surfaces and devices Microfluidics modeling and experimentation Device level implementation of BioMEMS concepts for different applications. Because BioMEMS is an application-driven field, the book also highlights the concepts of lab-on-a-chip (LOC) and micro total analysis system (μ TAS), along with their pertinence to the emerging point-of-care (POC) and point-of-need (PON) applications.
