*Digitalization to Improve Tax Compliance:
Evidence from VAT e-Invoicing in Peru* Mr.Matthieu
Bellon,Jillie Chang,Ms.Era Dabla-Norris,Salma
Khalid,Frederico Lima,Enrique Rojas,Pilar
Villena,2019-11-01 This paper examines the impact
of e-invoicing on firm tax compliance and
performance using administrative tax data and
quasi-experimental variation in the rollout of VAT
electronic invoicing in Peru. We find that e-
invoicing increases reported firm sales, purchases
and value-added by over 5 percent in the first
year after adoption. The impact is concentrated
among smaller firms and sectors with higher rates
of non-compliance, suggesting that e-invoicing
enhances compliance by lowering compliance costs
and strengthening deterrence. The reform's
positive effects on tax collection are hindered by
shortcomings in the VAT refund mechanism in Peru,
suggesting that digital tools such as e-invoicing
should be complemented by other reforms to improve
revenue mobilization.

Selected Papers from PRES 2018 Jiří Jaromír Klemeš, Petar Sabev Varbanov, Paweł Oćłoń , Hon Huin Chin, 2020-06-17 The depletion of natural energy resources provides evidential adverse impacts on world economy functionality. The strong requirement of a sustainable energy supply has escalated intensive research and the discovery of cleaner energy sources, as well as efficient energy management practices. In the context of a circular economy, this research not only targets the optimisation of resources utilisation at different stages but also emphasises the eco-design of products to extend production life spans. Based on this concept, this book discusses the roles of process integration approaches, renewable energy sources utilisation and design modifications in addressing the process energy and exergy efficiency improvement. The primary focus is to enhance the economic and environmental performance through process analysis, modelling and optimisation. The articles mainly show the contribution of each aspect: (a) design and

numerical study for innovative energy-efficient technologies, (b) process integration–heat and power, (c) process energy efficiency or emission analysis, and (d) optimisation of renewable energy resources’ supply chain. The articles are based on the latest contribution of this journal’s Special Issues in the 21st conference entitled “Process Integration, Modelling and Optimisation for Energy Saving and Pollution Reduction (PRES)”. This book is complemented with an editorial review to highlight the broader state-of-the-art development.
