Intracranial EEG Nikolai Axmacher,2023-08-01 This book offers the first, comprehensive guide to planning and conducting intracranial EEG studies, and analyzing intracranial EEG data. The chapters address core questions in the field of intracranial EEG research. They are written by internationally recognized experts in the domain of intracranial EEG and acknowledge the heterogeneity of approaches in this field. The particular format of the book allows readers to find clear guidelines, hands-on expertise and invaluable background information for planning and conducting state-of-the-art intracranial EEG research projects. Besides offering a reference guide to newcomers in the field, it also provides scholarly information for the more experienced researcher and inspiration for the expert. The book covers a wide range of topics, with a special emphasis on aspects in which intracranial EEG data differ from other types of data in the cognitive neurosciences. It discusses typical patient characteristics and implantation schemes, ethical issues, and practical considerations for planning and running intracranial EEG experiments. It addresses signal characteristics and the physiological background of oscillatory and non-oscillatory aspects of intracranial EEG signals. It describes complex pre-processing steps such as advantages and disadvantages of different referencing schemes, and how to identify the location of electrodes. In addition, it answers specific questions on data processing, addressing core aspects of statistical analysis, and suggesting guidelines for data presentation. Further, it covers advanced topics such as causal interventions (i.e. deep brain stimulation), acquisition and analysis of single-unit data and multimodal recordings, and discusses important future challenges and opportunities in the field of intracranial EEG research.

Ancient Beliefs and Customs of the Tagalogs Jean-Paul G. POTET,2017-11-18 This book is a provisional essay, followed by a vocabulary and an index, on the Tagalogs' world view in the Sixteenth Century. It is mainly based on the entries of the earliest dictionaries of the Tagalog language. These were written by Spanish lexicographers about half-a-century after the conquest of the Philippines (Cebu 1565, Manila 1571). Additional data are drawn from Spanish chronicles. Many of the recorded beliefs and customs were already obsolete at the turn of the Seventeenth Century. Some are extremely surprising, starting from the primeval myth according to which the world had no solid land at its beginning, but only two fluids, water and air.

Revenge of the Tiamat Dennis L. Siluk,2002-09 Siluk' s Tiamat Trilogy, and his book, Mantic ore have been compared to Star Trek, Stephen King, Michael Connelly and John Grisham's books. They are compelling, affecting, and portray life at the edge. In this third volume of his Tiamat series, the hero becomes vulnerable, obsessed and somewhat investigative, partly because of his youth, and anxiousness. As with his previous two volumes, he faces the demon world, within his city state of Yort, and outside it. Good fiction will takes you on a journey; what humans could face, is what they will look at. A step into a shift in time; from one era to another; in the middle is the soul that wants to say, it is all worth while. In this book as well as his other books; you go on such a journey, look at what may present itself. At the end, it is all worth while. It is a world of the 6th Millennium

BC. It is The Age of Pride. An age we may have to face someday. The second part of this book, you find a conglomeration of hypnotic adventures; a spiritual journey throughout the land of Lemuria [ancient Pacific], counter balance to Atlantics.

Synergy Development in Renewables Assisted Multi-carrier Systems Majid Amidpour, Mohammad Ebadollahi, Farkhondeh Jabari, Mohammad-Reza Kolahi, Hadi Ghaebi, 2022-01-15 This book explores the different aspects of energy in human life especially expressing the advanced technologies in renewable energy resources. Due to the environmental pollution caused by fossil fuels and the non-permanent nature of these resources, the move towards the use of renewable energy has accelerated. In recent years, many attempts have been made to improve energy systems' performance by using multi-generation units, and these set-ups have been analyzed from the perspective of energy, exergy, economics, and environmental indicators. The book's primary goal is the effort to introduce new methods for assessing and upgrading the synergy. Therefore it examines sustainable practices such as water-energy-food nexus in poly-generation units, novel desalination systems, and smart greenhouses. One of the significant issues in these energy systems is the storage methods; for instance, carbon capture to reduce environmental pollution and the hydrogen store for the utilization in supplementary fuel. Also, robust optimization, uncertainty and risk-aware probabilistic analysis, energy management, and power supply of sensitive places such as oil rig platforms by renewables are examined.

Diabetic Foot Ulcer Mohammad Zubair, Jamal Ahmad, Abida Malik, Mallikarjuna Rao Talluri, 2020-10-05 This book discusses essential aspects of diabetic foot ulcers, including evidence-based information on its pathogenesis and pathophysiology, as well as the molecular mechanisms and biomechanics of the diabetic foot. It also highlights the need for a multidisciplinary team to be involved in the management of diabetic patients with foot ulcers, and describes available and future tools for evaluating patients who are at risk. Exploring the main current therapies as well as the latest developments, future directions and potential new treatments, such as growth factors, stem cell therapy, alternative medicine and nanotechnology, the book is a valuable resource for clinicians and medical graduates but will also appeal to researchers working in the field.

Preclinical Evaluation of Antimicrobial Nanodrugs Juan Bueno, 2020-05-08 Translational medicine addresses the gap between research and the clinical application of new discoveries. To efficiently deliver new drugs to care centers, a preclinical evaluation, both in vitro and in vivo, is required to ensure that the most active and least toxic compounds are selected as well as to predict clinical outcome. Antimicrobial nanomedicines have been shown to have higher specificity in their therapeutic targets and the ability to serve as adjuvants, increasing the effectiveness of pre-existing immune compounds. The design and development of new standardized protocols for evaluating antimicrobial nanomedicines is needed for both the industry and clinical laboratory. These protocols must aim to evaluate laboratory activity and present models of pharmacokinetic-pharmacodynamic and toxicokinetic behavior that predict absorption and distribution. Likewise, these protocols must follow a theranostics approach, be able to detect promising formulations, diagnose the infectious disease, and determine the correct treatment to

implement a personalized therapeutic behavior. Given the possibilities that nanotechnology offers, not updating to new screening platforms is inadequate as it prevents the correct application of discoveries, increasing the effect of the valley of death between innovations and their use. This book is structured to discuss the fundamentals taken into account for the design of robust, reproducible and automatable evaluation platforms. These vital platforms should enable the discovery of new medicines with which to face antimicrobial resistance (RAM), one of the great problems of our time.
